HARDWARE

HARD EXCLU

A Review of the American Hardware Market.

Published Fortnightly by the HARDWARE PUBLISHING COMPANY, No. 143 Chambers St., New York.

VOL. XII. No. 1. New York, October 10, 1895. $1.00 A YEAR

MAGNOLIA METAL
IN USE BY
EIGHT LEADING GOVERNMENTS.

Magnolia Metal Co.,
OWNERS AND SOLE MANUFACTURERS,
74 Cortlandt Street, New York.

London Office: 75 Queen Victoria St.
Chicago Office: Traders Building.

CORNELL UNIVERSITY.
ITHACA, N. Y., August 10, 1895.

To whom it may concern: I would respectfully state that I have used Magnolia Metal with satisfaction for bearings where other metals have given a great deal of trouble. I have employed the metal in crank-pin boxes on the Experimental Engine at Sibley College, and in the bearings of water wheels which were under considerable pressure.

We have made some tests to determine accurately the friction reducing qualities and durability of this metal. On account of an accident to our machine these tests are not all completed, and a full report cannot be given at the present time.

Sufficient has been done, however, to indicate the superior quality in every respect. I may say that I fully believe the metal has most excellent quality in every respect for the purposes and uses claimed. I am sir, truly yours, R. C. CARPENTER.

(Professor of Experimental Engineering, Sibley College, Cornell University, Member Society Mechanical Engineers, &c., &c., &c.)

ORANGE SPORTING POWDER, MANUFACTURED BY LAFLIN & RAND POWDER CO.

ORANGE RIFLE EXTRA, ORANGE SPECIAL, ORANGE DUCKING, ORANGE LIGHTNING.

The attention of TRAP AND FIELD SHOOTERS, RIFLEMEN AND DEALERS IN GUNPOWDER, is called to the new ORANGE SPORTING POWDER, patented April 17th, 1888, and branded ORANGE RIFLE EXTRA.

This Powder is quick and strong, and burns with such perfect combustion that the only residum left in the barrel after shooting is a dark oily substance easily removed While this Powder is not exactly SMOKELESS, it gives only a light bluish smoke, which is almost instantly dissipated, and interferes but little with the shooting of the second barrel, taking the place of the so-called smokeless powders in this respect.

This brand of powder sells at the same price as any other brand of Rifle Powder and is superior to any made. No person who shoots can afford not to give it a trial, as after once trying it he will never use any other Powder when he can obtain the ORANGE EXTRA. Weight and quality guaranteed.

MILITARY, MINING AND BLASTING POWDER.

LAFLIN & RAND POWDER CO., 99 Cedar Street, New York City.

IT TAKES A PULL

to separate the plies of our rubber belting. A yoke of oxen can do it, but hard service won't, so strong is the friction. Our belting is uniform in width and thickness, consequently more of its surface comes in contact with a pulley. That means

NO WASTE OF POWER.

Rubber belting is never injured by water, hence it is best for out-door use, for wet localities, and for mills where the atmosphere is surcharged with moisture or steam, as in paper mills, tanneries, etc. Buy the durable kind, branded 1846-Para, Double Diamond or Carbon, made for 50 years by the

The PUTNAM Hot-Forged and Hammer-Pointed Horse NAILS

Are made in Sizes and Styles as below:

TURF NAILS, Nos. 1 to 5.

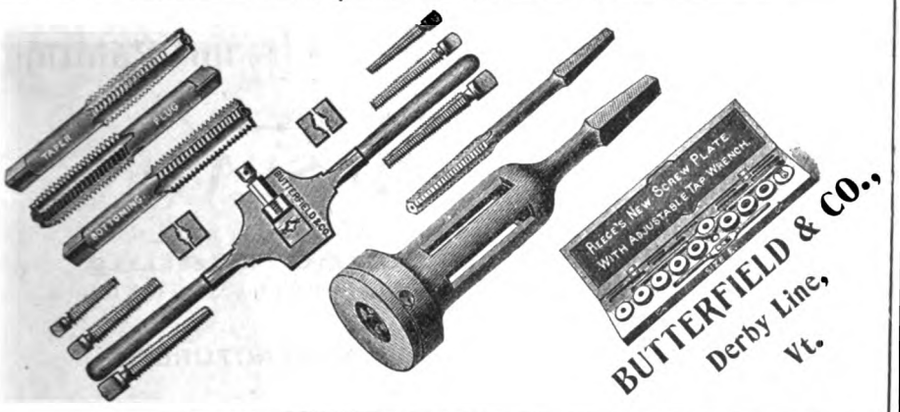
FRENCH HEADS, for punched shoes without creases, Nos. 3 to 7.

REGULAR HEADS, Nos. 5 to 14.

CITY HEADS, for shallow creased shoes, Nos. 5 to 9.

COUNTER HEADS, or FROST NAILS, Nos. 5 to 9.

Prices of these styles are the same as for Regular Heads of the same size.



The **only** Horseshoe nails in the world made precisely the same as the old-fashioned, hand process, being exclusively **Hot Forged and Hammer-Pointed.** This **hammering** (not pressing, rolling or shearing) while the metal is at welding heat blends all the particles into a compact, firm nail that outwears all others and will **Never Split, Sliver or Break.** *They are not sheared but have smooth edges clear to the point.*

The attempts of other manufacturers, in their advertising, to identify their product with the Putnam Nail leads us to state that the PUTNAM NAIL is made SOLELY by us in the ONLY RATIONAL WAY a GOOD horsenail can be produced.

BLACKBOARDS

Are now ready for Painting,

AND THERE IS BUT ONE ARTICLE WITH WHICH TO PRODUCE A SATISFACTORY RESULT, AND THAT IS

THE LAWRENCE BLACKBOARD SLATING.

This slating will not glaze, scale or blister when properly applied. The great fault with other liquid slatings is that they produce either too smooth or too rough a surface. **The Lawrence Slating** avoids both faults and produces a slightly rough yet black surface, that can easily be written on, which takes up but little chalk, and from which erasures are easily made.

CIRCULARS AND PRICE LISTS ON APPLICATION TO THE MANUFACTURERS.

Toledo Wheelbarrow Works. Toledo. O.

The AMERICAN WICK is made on scientific principles. The gum inherent in the natural cotton is taken out, and no expense is spared to produce a wick that will give THE GREATEST ILLUMINATION.

THE
AMERICAN WICK
Made by the
WICK DEPARTMENT
Of the STANDARD OIL CO. of NEW YORK.

Oil drawn up through the AMERICAN WICK burns with a large, clear, white light and the flame does not drop off in size as it does when a poor wick is used. When the cotton is clogged with its natural dust and gum the full illuminating power of the oil is not obtained and the complaint is heard that the light DROPS.

Established, 1882. Capacity, 100,000 Tons.

THE ORIGINAL IS THE BEST.
ROYAL CENTRAL DRAFT LAMP.

This Lamp has no Superior in the known world.

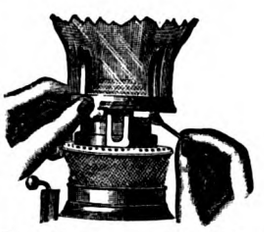
Gives the Largest Light for Wick Exposure of any Lamp made.

ROYAL LAMP.—No. 1013.

Chimney Lift and Wick Raising Device the best and easiest of adjustment. There are many imitations of these improvements, but the **ROYAL** is still the best.

The Royal Chimney. Lift will stay in position while lighting the lamp without support from the hands. This no other lift device will do.

The Wick Raising Device of the Royal Lamp is unquestionably the best, and has the approval of our largest competitors by their practical adoption of it.



The Wick can be adjusted more accurately and more easily than by any other device.

Workmanship, Style and Finish are unsurpassed. Made in all finishes of Stand, Table and Banquet Lamp. No better lamp for the dealer to handle.

HALL'S IMPROVED PIPE WRENCH.

DO YOU SAY that this wrench will crush or cut the pipe? It will, and so will ANY PIPE WRENCH if you don't know how to use it. The principal cause of Pipe Wrenches crushing or cutting the pipe is because the GRIPPING POINTS ARE DULL.

THIS WRENCH if kept sharp

will grip high on the pipe, and you can screw a pipe so tight that it will open a malleable fitting, and strip the thread, WITHOUT CRUSHING OR CUTTING THE PIPE.

You can sharpen THIS WRENCH IN A FEW MINUTES on a grindstone or emery wheel WITHOUT TAKING IT APART.

It is impossible to LOCK OR WEDGE THIS WRENCH on the pipe.

It will COST LESS FOR REPAIRS than any other Pipe Wrench.

IT IS THE BEST SCREW WRENCH, as it is stronger than any other, and by pulling the reverse way it will grip a nut or fitting and WILL NOT SLIP.

It is DROP-FORGED from TOOL STEEL.

Sam'l Hall's Son,

Bicycle Prophecies for 1896.

The interest of the active and intelligent Hardwareman in all that relates to the sale of Bicycles and their adjuncts, is widespread and natural, and increases with each succeeding season. This is because so many dealers are added each year to that large number who had already made the wheel a permanent and paying portion of their stock. All the evidence at hand favors the statement that there will be many more to enter the trade for the season of 1896, than were placed upon the record in that just closed.

From the beginning, it has been the pleasure of HARDWARE—as it was its business duty—to urge upon the Hardware dealer the advantages arising from the sale of wheels. We took that stand at a time when a great many in the trade looked with little favor upon the suggestion, while not a few were set against the new departure altogether. Time, and the rich experience of the several years past, have justified the wisdom of that position. We have also made it a point of duty to keep the trade acquainted with such movements in the bicycle world, as had a bearing upon the making and selling of wheels.

In accordance with that purpose, HARDWARE has recently addressed a letter to many of the leading wheel manufacturers of the country, asking their opinions as to several points of prime importance. The answers have been prompt and full, and the information given, while, of course, not exact—an impossibility in the nature of things—is of value as showing the views of the leading makers as to the chances and possibilities of the future. A number of these answers appeared in the issue last preceding, and others are given elsewhere in that of to-day.

The ground covered by these questions was substantially as follows:

How many bicycles will be manufactured in America for the season of 1896?

How many were manufactured in 1895?

In your opinion, how many wheels were marketed by the Hardware trade during the year past?

Will the prices of bicycles in general be lower or higher?

Is there any danger of the bicycle business being overdone?

A summary of the responses will be of interest. The opinions of those who made a guess as to the total output of wheels for 1895 and 1896 are as follows:

	1895.	1896.
Pope Mfg. Co., - - -	600,000	1,000,000
Fay Mfg. Co., - - - -	450,000	750,000
Crawford Mfg. Co., - - -	450,000	700,000
Rochester Cycle Mfg. Co., - -	400,000	750,000
McIntosh-Huntington Co., - -	350,000	600,000
Winton Bicycle Co., - - -	400,000	800,000
Warwick Cycle Co., - - -	500,000	800,000
St. Louis Refrig. & Wooden Gutter Co.,	425,000	750,000
Queen City Cycle Co., - -	400,000	650,000
Monarch Cycle Co., - - -	450,000	750,000
Grand Rapids Cycle Co., - -	450,000	750,000
Rouse, Hazard & Co., - - -	500,000	900,000
E. C. Stearns & Co., - - -	750,000	1,000,000
Peerless Mfg. Co., - - -	300,000	600,000
Snell Cycle Fittings Co., - -	500,000	650,000
Hunt Mfg. Co., - - - -	500,000	1,000,000

The above statements answer the first and second questions. The third question is the one that relates more directly to the Hardware trade; and as these manufacturers speak out of their own experience, there is no small value in their responses. Here is what some of them say:

"The Hardware trade is becoming a more important factor all the time in marketing bicycles, and in a very large number of cases they make the most desirable agents that can be found."

"We think that more than 40 per cent. of our output was marketed through them, and it is the writer's firm belief that the Hardware dealers are one of the best channels through which to market this class of goods. We were among the first to seek an outlet through them, and have no reason to regret our effort in that direction."

"A large measure of them were marketed by the Hardware trade in one form or another."

"The Hardware dealers are the distributors of a very large percentage of the output, and are materially increasing their efforts in this department of their business."

"It is impossible for us to judge of how large a proportion of the goods made this year were marketed by the Hardware trade, but we believe it was quite a liberal percentage."

"A large proportion of our machines have been marketed to the Hardware trade of the United States. We have found that Hardware dealers who take the

Digitized by Google

matter up with the right spirit, and endeavor to become thoroughly posted regarding the details of the business before entering it largely, make the very best of agents."

"Probably twenty per cent. of the bicycle business is handled through merchants who deal in Hardware."

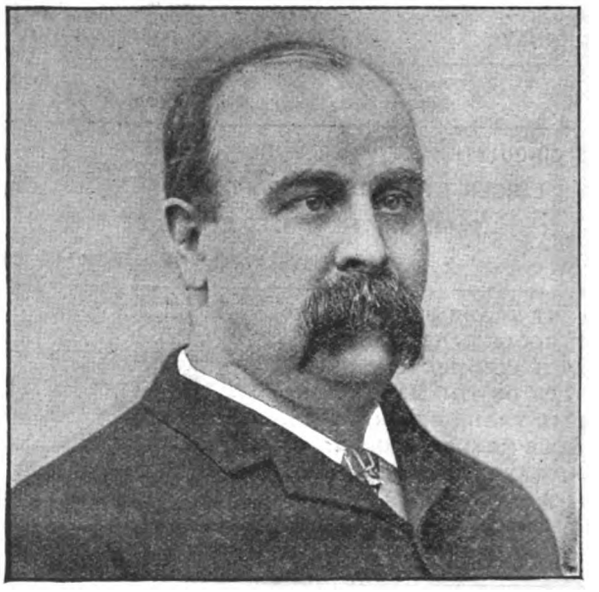
"We have no accurate means for estimating the number of wheels marketed by the Hardware trade during the past year. Perhaps twenty-five per cent. of our output has been handled by the Hardware trade."

"We can only make a rough guess as to the proportion of machines that were marketed by the Hardware trade during the past year. We would say, however, that probably one-third of the entire quantity was sold in this manner."

"We have no basis for an opinion as to how many wheels the Hardware trade marketed during the past season, but we should think that that trade must have undoubtedly been a considerable factor in disposing of the bicycle product."

"The Hardwaremen have certainly become an important distributing source for the bicycle manufacturers, and every year they will undoubtedly be more in evidence."

"Probably one-half were marketed by the Hardware trade, either wholesale or retail."



As to prices, the general opinion is that they will be about the same as in 1895, any tendency to cut prices being met by the increase in the cost of material and labor. Some answers touch very pointedly upon the question of overproduction; and a glance at the numbers of new concerns entering upon the manufacture of wheels, as given in our bicycle trade record each issue, will show that there is danger in this direction in the near future, if not at present. There is one pleasing point that will be noted in a perusal of these answers: Nowhere is there a suggestion as to a waning of the interest of the public in the bicycle question. Apparently, the wheel has come to stay.

HARDWARE calls attention in a recent number to the need of action by the Legislature to insure greater safety on the electric elevators so much in use in the tall buildings of cities. Each elevator in a modern New York "sky-scraper" travels many miles a day. Even when the safety appliances work, after a sudden and unintended descent through several stories, the effect is rather severe on the well being of the passengers. A man may be ever so cool in the presence of such danger, yet the experience is one which may be injurious to him in a physical sense. It is one which no woman should be called upon to undergo. To be sure, there are guarantee companies which regularly inspect the elevators for which they assume responsibility. The law should provide that such inspection shall be systematic and general. It will not do to wait until some awful accident draws popular attention to the subject. As the number of these elevators increases there is danger that constructors and those maintaining them will become careless, and the lives of thousands will be more subject than now to deadly perils, if the inspection is not rigid.—*New York Telegram.*

Duxbury's great record ride from San Francisco to New York, breaking the record by ten days and seventeen hours, was accomplished on the Lovell Diamond Bicycle. This speaks well for the John P. Lovell Arms Co., as the whole trip was made without a mishap to the wheel. It surely proves its great strength and durability.

Nominee Keating.

The Hardware trade of New York has been complimented by the nomination of one of its leading members to an important city office. Thomas F. Keating is the nominee for City Register of the fusion between the Republicans and the State Democracy, having long been a leader in the organization last named. Mr. Keating needs no introduction to the readers of HARDWARE. For over a quarter of a century he has been identified with the Yale & Towne Mfg. Co., and is now its assistant treasurer and manager of its sales department in New York. He was born in Pittsburg, Pa., about forty-seven years ago. He became identified with the Yale & Towne Co. twenty-six years ago; first as salesman, and later in other positions of responsibility and trust. He has always been interested in everything pro-

posed for the good of the Hardware trade. He was one of the most active and efficient among the founders of the Hardware Club, and has been a member of its board of governors, and treasurer, from the beginning. The value of his labor in these positions cannot be overestimated.

He has been in New York politics for fifteen years, but actively only for the past four years, during which time he has been the Grace Democracy Chairman in the Ninth, formerly the Thirteenth, Assembly district. He was prominent in the affairs of the old County Democracy, and was one of the founders of the State Democratic organization. He was very active in the anti-Snapper movement, and was contestant for a seat in the last Democratic State Convention at Syracuse. Personally he is genial and approachable, and has not only the respect, but the sincere regard of all his personal and business associates.

For distribution at their exhibit at the coming Exposition of the Massachusetts Mechanics' Charitable Association of Boston, the Bissell Carpet Sweeper Co., who seem to be thoroughly up in all points appertaining to advertising, have gotten up a very neat Lady's Blotter, lithographed in eight colors and perfumed. It is quite a neat idea and one that will doubtless meet with the approval of the ladies. The Bissell Co. expect to make a very excellent exhibit at this Exposition.

Those Cincinnati Hardwaremen who bought 100,000 kegs of nails last spring at 95 cents and have just sold them at $2.40 can afford to open a keg.—*Kansas City (Mo.) Journal.*

She Loved Another.

He couldn't discover the key to her heart,
Though his love was a strong and a hale one,
For how was this Harvard young student to know
That the lock on her heart was a Yale one?

—*New York Herald.*

Mr. Nutting on American Trade.

J. R. Nutting, of Sickels, Preston & Nutting Co., Davenport, Iowa, recently published in the *Ironmonger*, England, a very interesting communication, which we are pleased to reproduce in full: "It would be impossible to answer your inquiries of July 25th, directly or even in a general way, without seeming to discuss politics, and as we are free to admit that we have strong political preferences, we could not attempt to answer some of the questions asked without more or less prejudice. Omitting our own ideas of the cause of the late depression of business in the United States, or the reason for its radical improvement now, the improvement is certainly here; business in Hardware is good, and the American manufacturers in this line, or, in fact, of any goods made of metals, especially iron and steel, are crowded with orders, and give evidence of substantial prosperity. There is no indication of a 'boom.' Under depressing influences, some time ago many of our factories were closed, and in order to realize quickly on finished articles on hand, an immense amount of manufactured goods were thrown upon the market regardless of cost, to say nothing of a profit to the makers. As soon as encouraging conditions began to appear confidence returned; the surplus stocks having gradually melted away, were no longer a disturbing element; inquiries for prices became more frequent, orders for present wants were larger, and the more confident buyers began contracting for future wants. The factories were again started, wages increased, wage-earners having plenty of work and liberal pay, began spending money freely, trade became better, prices began to advance, and are now slowly but surely returning to a normal basis. Until they reach that point, while stimulated with upward tendency of the markets, trade will of necessity be brisk, margin of profits will be larger, and when normal prices and normal conditions are fully restored our average prosperity will be maintained without any reaction, until some unforeseen disaster again disturbs our domestic commerce and our commercial relations with other countries. Higher prices here, with increased volume of business, will necessarily cause our merchants to draw on your factories for larger quantities of goods."

The Gem Stove and 1896.

The Dangler Stove & Mfg. Co., Cleveland, Ohio, make the following special announcement to the trade:

THE DANGLER STOVE & MFG. CO.

CLEVELAND, OHIO, October, 1895.

Gentlemen: When we first called the attention of the public, a year ago, to the special merits of the Gem Stove, we did so because we were thoroughly convinced ourselves that we had succeeded in making a stove that must meet with popular favor, and after a year's trial by over 30,000 families throughout the United States, we have their unqualified endorsement of the many advantages of the Gem over all other Vapor Stoves ever put upon the market:

First: Because it is handsome, convenient in construction, and absolutely safe.

Second: Because it has a more powerful heating capacity, and at the same time uses less gasoline than any other style of Vapor Stove.

Third: Because it is a perfect working stove in every respect, and at a price within the reach of every household.

The absolute merits of the Gem Stove having been so thoroughly established, we have decided to make a complete line (with added improvements in burner and tank) for the season of 1896, including the Cabinet Ranges. The Gem is exclusively our own, covered by fundamental patents, and can be made by no other manufacturer.

We will also continue as heretofore to make a full line of the Evaporating or Process Stoves, as well as the regular Generating Styles and Juniors, so that we are fully prepared to supply the trade a complete line of Vapor Stoves, as well as Gas Ranges and Stoves, for 1896, and think it would be to your interest to familiarize yourself with our line before purchasing. Respectfully,

THE DANGLER STOVE & MFG. CO.

Landers, Frary & Clark's New Catalogue.

We have just received from Landers, Frary & Clark, New Britain, Conn., their catalogue for 1895. It is a handsome volume of some 200 pages, bound in black boards, with an ornamental edge. The edges of the leaves are red, which makes a striking contrast to the black cover. The company say that as most of their Hardware is house-furnishing, it has been found more convenient for the trade to have it in one book, and they have therefore put their entire line in that form, and have tried to make as compact a book as possible. Additionally, they have issued a photogravure catalogue of fine goods, showing full size photographic representations of the goods of a class which are not always carried in stock, and that when sold by illustration should be accurately represented. It is rather a new departure in this line, and is indeed a handsome and attractive book. Landers, Frary & Clark are among the leading cutlery makers of the country, and have reason to be proud of their catalogue. Some of the articles embraced in the illustrations are: All kinds of carving sets, in ivory, pearl and stag; table, medium, and dessert knives and forks; steels, fish knives and forks; cheese scoops, cake and cream knives, berry spoons, crumb knives, soup ladles, pie knives, salad sets, table knives in a variety of styles, ink erasers, bread knives, butcher knives, hunting knives, and a variety of articles too numerous to mention.

Change of Firm.

John W. Hughes, who for over twenty-five years has been connected with W. & S. Butcher's agency, became, on October 1st, sole agent for the above goods in the United States. Francis Speir, who has been the agent of W. & S. Butcher in this country for over forty years, has retired from the business. Mr. Hughes has associated himself with McIlwaine & Linn, under the firm name of McIlwaine, Linn & Hughes, at No. 122 Chambers Street, New York. The new firm will represent, as sole agents, the following factories, and will continue to visit the trade in the interests of these factories, and all business entrusted to the new firm will receive prompt and careful attention: Mannesmann Tube Co., W. & S. Butcher (Wade & Butcher), Ward & Payne, Maleham & Yeomans, Singleton & Priestman, of England, and Ad. Arbenz, of France.

The Vapor Stove Manufacturers.

At the recent annual convention of the Vapor Stove Manufacturers' Association, held in Cleveland, Ohio, there were added to the nine original members, four new ones. This is not, as some of the daily newspapers seem to imagine, a "combine" or a "trust," but simply an association which meets annually to fix the list prices and discounts. In this way they have managed for the last eleven years to establish and keep a uniform list and discount, and while there is an advance in the material which enters into these stoves, there has been only a slight advance made on a few of the stoves manufactured by the Association for the season of 1896.

The Buckeye Churn Co., Sidney, Ohio, would be glad to furnish any needed information as to the merits of their famous Buckeye Churn, the one built upon the principles of concussion. They have reasons to believe in it themselves; and, in a true missionary spirit, would be glad to carry the glad tidings to others.

Something About High Explosives.

As a sample of the printers' and designers' art, and as an educational treatise on the qualities of High Explosives, the catalogue recently distributed by the Repauno Chemical Co., Wilmington, Del., deserves more than passing mention. It is of eighty-one pages, on heavy calendared paper; the cover is artistically designed, and shows Atlas with the world upon his shoulders, and the words "Atlas Powder" outlined in a blasting fuse. The illustrations, of which there are over fifty, are very instructive, besides being of real artistic merit.

The frontispiece represents an explosion with Atlas Powder in the Chicago drainage canal. Scattered through the pages are other realistic representations: Mixing Atlas Powder at the Repauno works, group of employees at the Repauno works, machine shop, interior of shell-making house, birdseye view of the Judson Powder works, and acid works and refineries, office and laboratory, the Atlas Powder and Repauno gelatine works and the laboratory, Repauno works being the principal ones. Other views show the effect of the various high explosives manufactured by the company in ice blasting, in breaking log jams, stump blasting, etc. The letter press is in red, and everything is stated in a clear and concise manner.

The name "high explosives" is now generally applied to that class of explosives of which nitro-glycerine is the active principle. "Atlas Powder" and Repauno Gelatine, manufactured by the Repauno Chemical Co., are classed under this head. The value of an explosive depends on three things: Strength or disruptive power, safety in handling, and keeping qualities. The productions of the Repauno Co. are said to possess all of above essential qualities. "Atlas Powder" is a mixture of nitro-glycerine with an absorbing dope, the chemical formula of the latter being so devised, that in addition to thoroughly and permanently absorbing the nitro-glycerine, it is itself a gas producing compound, thus materially assisting the effect of the explosion. It burns freely without explosion when unconfined in the open air, and will not explode by rough handling, overturning of wagons, collisions of cars, or by any ordinary fire. When fired by a blasting cap, it explodes with enormous force. Its uses are manifold, being employed for driving tunnels, railroad and other grading, sinking shafts and wells, mining silver, gold, lead, zinc, copper, iron, and other ores, moving piles of frozen ore in winter, quarrying, blasting clay for brick making, sub-marine blasting, removing wrecks, clearing ice-gorges, starting log jams and roll-ways, breaking stumps and trees, blowing holes for transplanting trees.

"Judson R. R. P." is a grained powder, having the heaving properties of blasting powder, combined with (some of) the great force and quickness of "Atlas Powder." It does not freeze in cold weather like high explosives, but has a tendency to "ball" or form in lumps. Where it is desired to have it in the grained form for facility of loading, it can easily be reduced to grains by placing "lumps" on a piece of canvas, or a floor, and breaking them up with a little pressure. This slight congealing has no effect on its power, and it need not be thawed like high explosives. It is not water-proof like "Atlas" and "Repauno Gelatine," and when opened it should not be left lying around exposed to the air and dampness. A good plan is to put it in an old powder keg, when being carried around the works. The Judson Powder is mostly used in railroad and canal grading. "Repauno Gelatine," as the name implies, is a high explosive powder, having a gelatinous consistency. It is therefore plastic and very dense or heavy, two very advantageous features in certain classes of work. It is made of any required strength, but the higher grades have extraordinary disruptive power, the highest grade being decidedly stronger than pure nitro-glycerine, and therefore very much stronger than 75 per cent. of dynamite, which is the strongest grade of that class of explosive that can be made.

Its plastic property, together with its unusual density, renders it particularly suitable for submarine work, or for tunnel or mine work where the flow of water is strong, because it will adhere firmly together even after the wrapper or shells are removed and is not, therefore, disintegrated and washed away by the water. By following the instructions given in this little book, an individual with an ordinary amount of common sense, could soon become an expert on some of the simpler forms of blasting, such as blasting boulders and clearing land of stumps.

A Great Southern Wire Factory.

A visit to the extensive establishment of the Dow Wire Works Co., Louisville, Ky., or an examination of their catalogue, will show any one that by no means are all the wire goods of this country made north of the Ohio River. They both give force to the statement made by the company that they have "the largest factory in the South making counter railings, wire and iron fences, iron beds, window and grate guards, fine scroll and brass work, electro bronze, etc."

The articles they make are almost infinite in variety, and covering about all the uses to which wire can be put, even in these days when the demands of civilization are so great and varied. A glance at their catalogue, No. 10, which is general in character, and does not include their special catalogues on fly screens, iron beds and bicycles, will show that they range from hat trees to grave guards; from store gates to elevator enclosures from paper racks to oat mangers; expanded metal lath to hitching posts; smoke-stack bonnets to ox muzzles; rat traps to forms for ladies' dresses; sand screens to wire clothes lines; egg-beaters to nursery fenders; bird cages to wire mats; babies' wire baskets to jail beds; post hole diggers to lawn tennis courts; lattice fences, poultry coops, wire stretchers, weather strips, fly screens, milk strainers, egg-beaters, tea pot stands, coal riddles, wire hens' nests, harness hooks, counter railings, transom guards, etc., etc. The Hardwareman who wishes to know what an infinite opportunity there is for the extension of his trade in the wire line, should send for a copy of this catalogue.

One seasonable line to which they are giving special attention at this time, and which is certainly seasonable for profit to retailers just now, is their Wire Spark Guards. They make various kinds and sizes of these, the details and prices of which will be furnished upon application. Their No. 5 is ⅞ inch diamond mesh, tinned wire, crimped; their No. 2 is 1¼ inch diamond mesh, coppered wire, crimped; their No. 4, ⅞ inch diamond mesh, tinned wire, crimped. These run in sizes from 16 to 24 inch. They are referred to as necessary to every grate, as "there is no danger of children falling into the fire or ladies' dresses burning when these guards are used."

They also make a lined Spark Guard, either square top or round top. These are made without hooks, and are intended to set down on the hearth. They are made either tinned or coppered, as desired.

The company also manufacture Wire Nursery Fenders which are set on the hearth and used before open fire places and grates to keep children and ladies' dresses from the fire. In their No. 3 the top and bottom frame is half-oval and bronzed; wire tinned and crimped in a ⅞ inch diamond mesh; put up three in a nest, one each, 32, 34 and 36 inches wide. They also make a Wire Nursery Fender with polished brass top and ornaments, and has an iron frame which is very strong, and the polished ornamentation upon the top gives it a handsome figure. They make these any size, to order. One other useful and attractive article is their Wire Stove Guards, made to any size, on order. The catalogue illustrating and describing all their line should be in the hands of every dealer.

CONFESSIONS OF AN UNSUCCESSFUL CLERK.--IX.

During the few days that followed the dropping of this bomb-shell of Simon House in our little home, my wife was very busy in figuring out methods for the raising of that thousand dollars. As an available start toward it, she brought to light some fifteen dollars that she had been slowly hoarding toward clothing. The remaining $985 was yet a deposit in the bank of her faith.

"Have you raised the money yet?" I jokingly asked her, a day or so after Mr. House had floored us with his proposition.

"I have not," she answered, "but I am beginning to see my way toward it."

"In your mind, my dear."

When I came home to supper, she had everything upon the table, ready at my hand. "You won't mind eating by yourself," she said. "I must run across the way, and don't want to leave the house alone."

As "across the way" meant, of course, only a little gossip with a neighbor, I made no objections. She was gone so long, that I closed the house without waiting for her, and went to the store. There I found the truant back of the counter in conversation with Simon, who seemed very much pleased over something, as he was engaged in an operation to which his heavy face was not used—that of harboring a smile that spread from ear to ear.

"Don't try to beat him down, Min," I said. "He's a hard customer on a trade."

"This isn't business; it's politics. I've promised to help him for sheriff, and that makes him smile. Now remember, Mr. House, it's a bargain?"

"Of course. A man who wants to run for office in this section of Ohio, has to keep to all he says."

When I went home at night, she told me something that made me open my eyes, and proved that she had really entered upon a campaign for the needed money.

"I had a talk with Mr. House about it," she said. ("It" in that household just then, could mean only one thing.)

"No wonder he laughed."

"You wait. I have made him agree to come down two hundred dollars. If you can pay in eight hundred, he will take the rest out of the first profits coming to you."

"The dickens you have!"

"Yes, and what's more, he's to let me make bonnets and dresses for his folks for another hundred. That cuts you down to seven hundred, and if you can't raise *that*, you don't deserve a wife with a Rothschild's head upon her shoulders."

"That's so!" was about all I could say, in my wondering admiration. "I'll have it now, if I go to Grange and rob a bank. It can be done with no trouble. The old Western Reserve has a loose grating on the Main Street side. Once in the cellar with a crowbar ——"

"It's to be had nearer than that," she responded significently.

"Where?"

She pointed in the direction of Weston.

"You don't know them," I answered.

"I know how to manage them better than you do."

A few days later I asked a day off, and with my wife and the store horse and wagon, set out for a visit in Weston.

The old folks were glad to see us, and listened with interested attention to my wife's glowing account of the road to fortune that had opened before us. We had decided to make no suggestion, as we knew that help would come all the more sure if we let it come as an offer from the other side. We accordingly spoke of the offer as one that of necessity must be declined, and went over upon another topic as though that one was permanently closed.

When we returned from a call upon some friends, I saw that my father had been led into the pantry by his better half, and was listening to a general declaration as applied to loans and the family fortunes. This state of siege was ended when we came in, and father went out on the horse block, and entered into a long communion with himself.

Just before we were ready to start for home, he suggested a look through the orchard. We talked of fruit, and the crops, and politics, and at last when he could put it off no longer, he said: "Mother has got it into her head that Sim House's offer is a good thing."

"There's no doubt of it," I answered. "The business is sound, the patronage good, the boss an honest man; and I know that even at the worst, the investment would pay ten per cent., and is certain to pay more. But I've made up my mind that it is out of the question for me, and that ends it."

"You wouldn't ask your old dad for a lift?"

"I would ask him willingly enough if I knew he could spare it. But the one thing I made up my mind not to do when this thing was sprung upon me, was to ask you to take any of the risk."

"But if it's a sure thing, where's the risk?"

"There always is."

"How much cash down does Simon want?"

"Seven hundred dollars. We can fix the rest." I told him of my wife's diplomacy. This pleased the Yankee strain in his nature, and he came as near smiling as a Yankee ever does when a money deal is in progress.

"See here, my boy," he said. "When mother and I go, we can leave you boys perhaps a thousand apiece. If I help you in this matter, and it don't turn out all right, the loss must come out of your share. That's only fair to the rest."

"Entirely fair."

"I have two hundred in the bank. John Evans wants the pony, and that will be a hundred more. I can get four hundred from Deacon Bundy on six per cent. Now if you think it's a good thing, go in and get up the new sign as soon as you please."

And so it was settled. I was determined that father should be protected, and the papers were so made that he had a lien upon my interest until the debt was paid. The sign was changed to "House & King," and my wife took an upward step in the social life of Branch, as the helpmeet of a proprietor instead of that of a clerk.

Simon House became sheriff that fall; and it was my wife who made him so.

She did not become a politician in petticoats, and mount the stump, or ride the county in his behalf. She could have done none of these, in very modesty; nor would she have found welcome or respect from candidate or voters in doing so. The New England decorum of our country life in the days of which I write, had room nowhere for that modern wonder which the comic papers of to-day have created—largely, thank heaven, in their imaginations—and call the "New Woman." She simply set her hand to a little service for her home and husband; and because she was working for love, and because her heart was in the endeavor, her effort was crowned with success.

Mr. House was a Republican, in that wonderful Ohio district which for a long series of years kept Elisha Whittlesey in Congress; which followed with Joshua R. Giddings for a quarter of a century or more; and which took James A.

Digitized by Google

Garfield out of the army and kept him in a more important service in Washington, until the people called him to a still greater trust.

It was a district in which money could not dictate the nomination or election of any candidate. Where character and the confidence of the people were requisites for political preferment. Where the farmers, as they met each other upon the country roads, or sat upon rainy days around the stoves in the village stores, decided as to platform and candidates; and where the man who set up to be a "boss" found himself helpless and out in the cold at the end.

Simon had served in his younger days as constable of Branch, and in his heavy, honest, bucolic way, had fallen into the notion that he would like to round out his career in the honorable and responsible office of sheriff; go to Grange and for a few years reside in the handsome brick dwelling in front of the jail; carry the keys to doors behind which malefactors were held; and be, for a time, a figure of some importance in the councils of the county. It was an honorable ambition. and he was well fitted for the place.

For several busy weeks Simon's black mare was seen speeding about the county roads, from Mesopotamia on the one hand to Hubbard on the other, and the amount of talking that this usually reticent man was compelled to do was enough to make him hoarse for life. There were other candidates in the field, and a week before the convention my partner found himself short of a nomination by several votes.

We were discussing the question one Sunday afternoon in the shade of his grape arbor, our wives eager listeners to all that was said. "One town delegation more," said Simon with a sigh, "and I would be all right."

"Let's see the list again," I said. Among those set down against him was Weston, my father's home.

I asked him what was the trouble over there.

"Well, they have a candidate for the legislature, and are lying low for trades. They won't commit themselves; but I have inside information that leads me to set them down against me."

"You don't mean to let them get away without knowing for sure?" asked his wife.

"I've done all I could," said Simon meekly.

"You give up too easy, I guess," said my wife.

"Well, I've done all I can. If you women know more about politics than I do, perhaps you had better manage my campaign."

"Will you give us a chance on the Weston delegates?" asked my wife with animation.

"Sure," said Simon, and dismissed the question with a laugh.

A day or two afterward these two scheming politicians in petticoats announced a trip to Grange, and laid a requisition upon Simon's horse and buggy. Upon their return at night they were very happy, and my wife confessed it all when the store was closed.

"We did not go to Grange, but to Weston. Father gave me the names of the men I must see, and by good luck I had known them all from my babyhood—Hen Greer, Lon Miller and Milo Wilcox. I told them all about your deal with House, and showed them that any help for him was help for us; and I never left a man of them until he gave me his solemn word that he would vote for Sim. But it must be kept very quiet, for they are supposed to be for that man from Mecca. They say that the nomination for legislature comes first, and that their candidate for that office will be either elected or defeated before a sheriff is chosen. They will then be free to go in for Sim; and they do this all as a personal favor to you and me."

Unlike most things in this world, the programme was carried out to the letter. The man from Weston was selected for representative in the State legislature, and Simon House was nominated for sheriff, with only two votes to spare.

The Bicycle in Japan.

In casting about the world for the good things thereof, the Japanese have not overlooked the bicycle. One of the droll sights presented me upon my landing here was a Japanese youth perched on an old-style home-made bicycle, getting direct action from the wabbling front wheel, his eyes turned upward and his kimono wings flapping in the breeze. The vehicle was constructed of plain wood and iron, and the only springness in it came from its general looseness. It rattled after the manner of a New York milk wagon on the cobblestones, but it was a bicycle, and it was a home production. Many of these traps are still in use among the Japanese and the old-style tricycle is not entirely ignored. The modern rubber tired bicycle is much affected by the foreigners in Tokio, Yokohama and Kobe. Nearly all the clerks in these cities ride to and from business on their wheels. The narrow streets, filled with pedestrians, playing children, carts and jinrickishas are a great drawback to riding in the cities, but the country affords fine sport.

The road from Tokio to Yokohama is well patronized by the wheelmen on Sundays. It is a mistake to suppose that the roads in this section of Japan are especially adapted to bicycling. They are narrow and uneven, and many of them are covered with bits of flinty gravel, which are severe on rubber tires. In the southern portion of Japan I have seen many miles of the loveliest highways in the world for wheeling. They are constructed on heavy stone masonry and are as smooth and as solid as any viaduct.

The Japanese are now manufacturing a light, rubber-tired bicycle which sells for about one-half the cost of an American or English wheel. It lacks durability and finish. In Yokohama a number of postmen use these wheels and a few of the police inspectors have them. The bicycle factory in Yokohama is quite an ambitious affair, and there is in one part of the town a training school largely patronized by Japanese youth. Our Minister Dun, who weighs something more than a barrel of flour, is now using a bicycle as a sort of health lift, and there is not a legation in Tokio that cannot boast of more than one bicycle. The ladies take to cycling slowly. Foreign women here are very circumspect. Both Yokohama and Tokio are seething with gossip. The woman who oversteps the lines of propriety stupidly established by the English "society leaders" is immediately tabooed. It has not been definitely settled as yet that bicycling is just the "propah thing" for ladies. I learn that not more than a dozen women in all Japan have taken to wheeling. I have only seen two in the actual enjoyment of wheels, and I do not care particularly if I never see another, for these were what are familiarly known as "sights." A number of English and American manufacturers have agencies here, and the demand for bicycles is increasing. The jinrickisha men despise the wheels and look upon them with something of the distrust and contempt that our railway navvies once entertained for the newly invented steam-digging machine. I am glad to say that it is very generally admitted by wheelmen here that the American machine eclipses all others in this market.—*John A. Cockerill in New York Herald.*

The Palmer Hardware Co., Rockford, Ill., at the annual meeting decided to change the name of the company to the Clark-McKinney Co., and it was also decided to reduce the capital stock from $24,000 to $20,000. John L. Clark was elected president of the company and Frank McKinney secretary. The year has been a very satisfactory one to the stockholders.

"Hop's" Corner.

How natural it is, in these bustling, driving days for high pressure business, to "jump on" one of your subordinates for the most trivial oversight or neglect. Sometimes it is a matter of very little moment, and scarcely involving a money value sufficient to make it possess a moment's interest; but notwithstanding these extenuating circumstances, the young man is made to feel how terribly lax he has been, how utterly valueless his "three dollars a week" services will eventually become, if this criminal carelessness continues. And all this is done in the interest of discipline! The culprit feels as though he wouldn't dare to ask an advance of a dollar a week in his salary for six months to come, he is made so painfully conscious of his unfitness for a commercial future.

And yet, if we were only frank and candid enough to make the avowal, we could all of us confess to some fearful "bulls" we made when we were in our 'teens or early twenties.

I'll never forget the $1200 bill I had charge of when in the third year of my connection with the Hardware business. I was considered safe enough to be entrusted to attend to everything belonging to the getting out, charging up, and shipping of a bill involving one thousand dollars and over. It was my business to have added to the bill when charging it, a charge for "insurance" which was always a specified rate for certain routes, and was made part of the invoice, ten per cent. being added to the total of the invoice, to make the amount, which was then entered into our insurance book of the "Atlantic Mutual;" the book sent to the office to ascertain the proper rating, endorsed by the president, and then the goods might reach their destination or not, for all we cared.

A great many—in fact, nearly all, of our western bills to Lake Michigan and Lake Superior trade, were shipped by "railroad to Buffalo," whence they took a steamer "around lakes" to destination, which made insurance doubly desirable, as scarcely a year passed but that a steamer went down. Consequently a large bill being fully insured, had to be duplicated "in a rush." Well, this especial bill of which I speak was entered up all right, adding the well-known rate for insurance. Invoice sent promptly, but the act of insuring—viz.: entering it into the insurance book in the usual manner, was neglected, and I never thought of it again for a whole week. In fact, I was at "Burton's old Theatre" in Chambers Street, where the building of the American News Co. now stands, and where I used to love to resort on Saturday nights, when some farcical remarks about insurance forcibly impressed my mind with my own sin of omission. The comedy possessed no further amusement for me; my "bad quarter of an hour," as the French would say, was lengthened to thirty-six hours before I could even attempt to repair the damage, and I couldn't tell during that time whether I should be able to retain my position in the store by getting out of this hole quietly, or lose it and my hold on the Hardware business forever by being compelled to confess my negligence.

But Monday morning came around at last, and when Dick Hawkshurst came to open the store doors, he found me on the stoop waiting for him, so anxious was I to get that insurance book. I entered up the amount of insurance, $1241—how well I remember it!—dating it back a week, and with the book in my hand and my heart in my throat, I started for the insurance office, where, of course, I arrived about the time it was being swept out by the colored porter. The first clerk who arrived, in response to my nervous questioning, informed me that the president wouldn't be there yet for an hour. As it was "a condition, not a theory that confronted me," it was no use of my returning to the store. I wanted to know my fate, so I just waited, when, about 9.30, an elderly gentleman with pleasant features, entered the president's private office, and the cashier, by a nod of his head, indicated that was the individual I was so impatient to interview.

With my book under my arm, I bearded the aged lion in his den. He seemed somewhat surprised at my early visit, but I soon apprised him of my troubles, and in the light of subsequent events, I give him credit for making the negligence on my part an elegant object-lesson for my future. "What," said he, "do I understand you to say, you protected the customer's interest by entering the insurance on his invoice, and thus forgot your employer's interests by failure to complete the insurance? Young man! the cashier who fills out the stub of his check *after* he has made out the check, is as lacking in business qualifications as you seem to be. This is a dreadful thing! Fully a week has elapsed, and the vessel on which these goods were transferred at Buffalo, may possibly even now be resting on the bottom of Lake Erie—(so much stormy weather as we have been having, too, lately," he said *sotto voce*, while the cold chills were playing tag down my spinal column.) "I will look over the bulletin this morning and see if I can find anything hopeful." And so the garrulous old gentleman's tongue ran on, every word creating a fresh fear in my heart; when finally, after pretending to examine numerous slips of maritime advices, he said: "Well, I can find no positive proof of loss, so that if you will faithfully promise me that you will never again fail to look after your employer's interest *first*, I will agree to sign the book." Of course, I readily promised, and the moment his initials were appended to the line on the insurance book, my grateful heart gave a mighty bound, and after profuse thanks, I ran all the way back to the store. Did I treat it as a good joke and talk about it all day with my fellow clerks? I did not; and I am free to confess, the worthy president's method of conveying instruction bore good fruit, for the Hardware business was spared my abrupt departure, and I was never caught as badly as that again.

"Hop."

A Paper of Tacks.

When in doubt, tell the truth.

Clerk and shirk may rhyme, but they don't sound well together.

The young man who knows only a part of it, learns more than he who knows it all.

Try and think as much about business when out of the store, as you do of your pleasures when in the store.

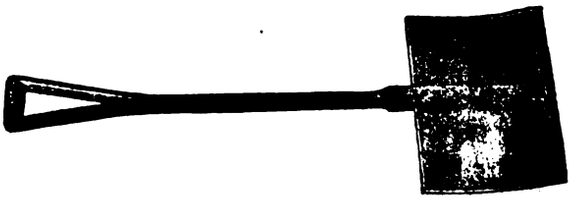
There was a cigarette-smoking clerk who once became proprietor, but it was by accident.

If you spend every cent you earn, you won't wear out shoe leather in going to the savings bank.

If you must smoke while at business, do it under the nose of the "boss," and not in the basement. You will the sooner learn what he thinks of you.

Constant abuse of those under you will strengthen your lungs at the expense of your manners.

The boy who lies to get out of a scolding, must be a good dodger.



The Columbiana Handle Factory, Columbiana, Ohio, has been sold to Shilling & Co. for $1800. The purchase includes the buildings, machinery, lots, stock and accounts, and represents about $100 for every $1000 originally invested. It is not definitely decided yet what will be done with it, but it is probable that a partnership will be formed and the business continued.

HARDWARE costs only One Dollar a year.

Phillips' Snow Shovels.

The A. J. Phillips Co., Fenton, Mich., who long since made their names synonymous in the minds of the trade with Wire Screens, are gradually gaining the same distinction in connection with Snow Shovels. They are making for this season all their previous makes, and also a new one which is illustrated in this connection. It is the "all wood," of which the makers say: "It is a new form of an old Eastern pattern shovel which some of our customers

have asked us to make. In this form of Snow Shovel the idea is to secure as much of a scraping edge as possible, the shovel being intended for use after a light snow storm. The advantages that we claim for our adaptation of this pattern are as follows: The blade is one piece of lumber instead of in several pieces, as they have heretofore been made. The handle is not bent, but is sawed to fit the curve of the blade. This prevents the shovel from straightening, as it is apt to do when the handle itself is bent to conform with the curve of the blade. The steel plate shoe is of unusual width, to enable us to attach the handle directly to the plate, for the purpose of giving the utmost strength. It will be seen that what we have aimed to do is to produce this old pattern of Snow Shovel in a much stronger and better form than it has been made heretofore." The company will be glad to send information concerning these goods, or their Wire Goods line.

New Weir Plow Works.

The ground plans of the buildings of the Weir Plow Co., to be erected at East Moline, Ill., have arrived. The buildings will be erected in three lines on ground measuring 1000 feet long by 550 feet wide, with three railroad tracks running by the side of and through them. The list of buildings is: Warehouse, 80x700; plow paint shop, 60x250; general paint shop, 84x165; erecting room, 75x224; plow stocking room, 60x60; grinding shop, 60x98; casting grinding shop, 42x75; fitting shop, 60x98; blacksmith shop, 60x252; wrought iron and steel stock room, 60x70; wood shop, 75x112; machine shop, 75x84; rattling room, 56x75; foundry, 75x196; boiler room, 50x80. Beside these are two engine rooms, storage building for cast and malleable fittings, bolts, washers, etc., pattern shop, fire-proof pattern vault, storage buildings for sand, coal, coke, oil and paint, and an office building 50x80 feet. The office building will be two stories high, and all the others one story, built of brick and costing in the aggregate about $75,000.

Test of the Krag-Jorgensen.

In the killing of the deserter Coffey at Fort Sheridan the United States army has its first practical test of the new Krag-Jorgensen rifle. The effectiveness of the terrible arm will scarcely be questioned. At fifty yards the nickel-plated conical bullet passed through the head of the victim, through a live tree eight inches in diameter, and thirty yards beyond, buried itself three feet into the hillside. The dead man's skull was shattered until only the scalp preserved its shape.

The Krag-Jorgensen rifle was designed in the paradoxical spirit of humanity toward man. This unavoidable but successful test at Fort Sheridan suggests that if the weapon is to be accepted, because of its clean-cut destructiveness, there may be, in the future, a new distance-line established at which armies shall engage in action. The horrible shattering effect of the bullet in Coffey's brain was due to the close range at which he received it. It is only beyond 400 or 500 yards that the steel-capped bullet adjusts itself to the effects of rifling sufficiently to cut a clean wound. Manifestly, then, two armies engaged with the Krag-Jorgensen gun at less range than this are, by force of interence, guilty of barbarism. At greater range the chances of war are perhaps greatly in favor of human targets escaping scot free.

Aside from speculative results this new weapon in the hands of men in garrisons contiguous to civilization is not reassuring. Target-range practice, chance firing by guards, as in the case of Coffey, and the chances of accidental discharge of these terrible weapons give no one absolute immunity for many miles around a government post. Even in the mountains of Colorado protests have been made against target practice which, with this new arm, is endangering the lives of miners in the hill country. It may come to be questioned if the government is justified, especially in settled communities, in using such a weapon in arming garrison guards.—*Chicago Record.*

The Keenedge Skate Grinder.

The illustrations accompanying this are of the Keenedge Skate Grinder, being placed upon the market by Charles Perkins, Bridgewater, Mass. It is an article that has been in use long enough to demonstrate its usefulness. The maker explains that "with this machine a boy or inexperienced person can grind skates faster and better than an expert in the usual way. The Holder can be used on any

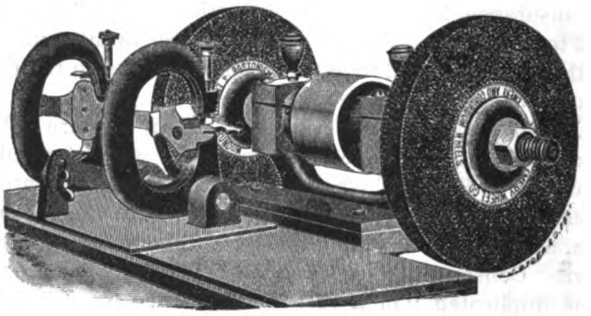

FIG. 1.—COMPLETE MACHINE.

emery grinder, by attaching a plate to the grinder at such a height as will bring the skate nearly opposite the centre of the wheel. It will grind square or high on either edge as may be desired; 6 to 10-inch wheels of No. 40 to No. 60 emery should be used." He further adds: "By using this Holder, anyone, whether experienced or not, can grind skates perfectly. I make a grinder with two wheels, as shown in cut, one coarse and one fine; or a lighter grinder with one wheel. They are designed to be set on a bench, and will be found useful for any kind of grinding. I also

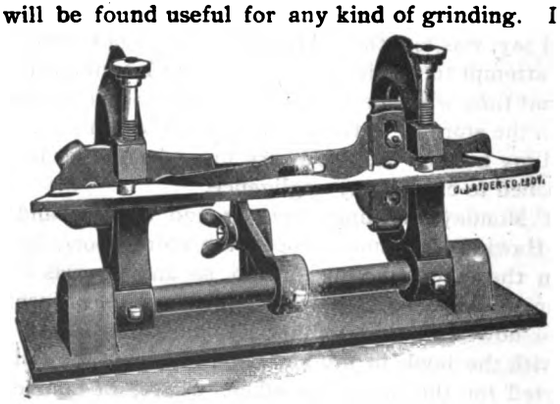

FIG. 2.—SKATE HOLDER.

make a foot power grinder of new design which can be carried about and used anywhere. These machines are thoroughly made and warranted to give satisfaction, and are sold at very low prices. The Holder can be used with any grinder by attaching a plate of iron or wood in front of wheel, as shown in cut. I give a liberal discount to the Hardware trade."

RECENT TRADE PUBLICATIONS.

"The Boys Have Something to Say About Dixon's Pure Flake Graphite" is the suggestive and comprehensive title of a neat monograph just received from the Joseph Dixon Crucible Co., Jersey City, N. J. It demonstrates the usefulness of this great product in connection with railroad work. "While some railroads," say the publishers, "have used Dixon's Graphite for many years and many master mechanics and engineers are fully aware of its economy and usefulness, we have not until quite lately attempted to bring it more fully before railroad officials and engineers. Lately we have been sending samples to engineers, and the letters and extracts will show how useful even the small samples have proven, and the evident economy, and the saving of oil and dollars if Dixon's graphite should be generally adopted by railroad companies. The careful tests made by experienced locomotive engineers domonstrated most conclusively that Dixon's pure flake graphite is as necessary to a well equipped engine as an oil can or monkey wrench. For cooling or preventing hot pins and eccentrics, for lubricating journals in truck and driving boxes, for cylinders and for general use Dixon's graphite was found indispensable. It gave free and easy action to valve motion. Valves worked free and reserve levers could be held with one hand, even when full boiler pressure was used. The wear of link and valve motion was reduced to a minimum, and the hauling capacity and life of the locomotive greatly increased. It was also found that the engine would work two or three notches closer in cut-off, which effected a saving in fuel and water, and in cylinder and valve oil. Dixon's finely powdered graphite was used in preference to the regular brand for the check valves of air cylinders, for lubricating the equalizing piston of air brakes, for preventing 'squealing' of air pumps, and for all delicate or small parts, and for oil cups with feeding holes too small for the regular graphite. In descending heavy grades, when train has to be held and pump worked to full capacity, lubrication with Dixon's Graphite made a most marked and satisfactory difference."

The Iowa Farming Tool Co., Fort Madison, Iowa, are already in the field with their illustrated catalogue for the season of 1896. It is a handsome volume of near a hundred pages, prepared and printed in an excellent manner, and bound in a handsome combination of yellow and red. The frontispiece gives a view of their attractive exhibit in the liberal arts building, World's Fair, at Chicago, in which they secured three prizes. The book is filled with clear cut illustrations of their great line of goods, with descriptions and prices. The company, in connection with the presentation of this work, say: "Your particular attention is called to the changes in list prices of the main line of Wood and Steel Goods. By this revision each class of goods, and in some instances each particular article, will have its own separate and distinct range of discounts, thereby giving each article its own correct selling price. Our hope is that these changes will lessen the undue, and sometimes unfair competition which has prevailed in the past. For snaths and cradles we invite your orders, asking that you send them through the National Snath Co., of Erie, Pa. For steel goods please send your orders direct to us. Our last season's trade exceeded the previous year 25 per cent., and encouraged us to enlarge our plant by additional machinery and a floor space covering more than twelve thousand feet. We are confirmed in the belief that it pays to make good goods."

The Samuel Winslow Skate Mfg. Co., Worcester, Mass., have issued a small but handsome catalogue of their 1895–6 line of Ice Skates. It is artistically printed in colors, with a skating scene upon the front cover, with illustrations of their factories on the inside. Their various lines of skates are also shown. A cipher telegraph code is also provided, so that orders may be sent promptly at the least possible expense. Especial attention is called to two important features, as follows: "Our line of skates offered to the trade for 1895 will have Winslow's New Adjusting Plate, for extending and contracting the heel and toe clamps. This is the simplest and most effective contrivance ever invented for adjusting skate clamps. It is simple, light, quick and strong. The steel used in this adjusting plate is our high grade crucible spring steel, tempered and specially rolled for the Samuel Winslow Skate Mfg. Co. We advise all buyers and users of skates to consider this fastening before purchasing skates made with the old fashioned screw attachment. We desire to call special attention to Winslow's Three-Ply Welded Iron and Steel Runner Stock, from which we make the runners of our Nos. 13, 15, 17, 53, 55 and 57 Skates. This stock is made in three layers. The two outside layers are hardened to the highest possible degree. The middle layer is very soft and is the first to wear off. The result is that the outside edges are left sharp and we have a bona-fide shelf-sharpening skate runner."

The Gilbert & Bennett Mfg. Co., New York, Chicago, and Georgetown, Conn., have just published their catalogue No. 133, which gives full description and illustration of their new line of Flower Pot Stands, some samples of which are fully described and illustrated elsewhere in this issue. The stands themselves and all their details are shown by illustrations in the little book referred to. In a note of description the company say: "Every merchant who considers the annoyance and often loss that attends the trade of other wire stands will regard these with satisfaction. They are carried at a low freight rate; will not be damaged in transit; occupy small space; always protected from dust; sales can be made from samples, and in many cases the stand can be delivered to the customer as originally received, who will not object to the slight task of unpacking and connecting the parts at his own home. In every detail, ample strength, beauty and utility of design, attractive and durable finish have been studied and incorporated in each stand to the end that they shall be satisfactory to the ultimate purchaser and practicable and profitable for the merchant to regularly keep in his warerooms."

The Anthony Wayne Mfg. Co., Fort Wayne, Ind., and St. Louis, Mo., who are everywhere known among the leading Washing Machine manufacturers of the country, have issued a neat and attractive catalogue of their lines of Washing Machines, and Self-Measuring Oil Pumps and Tanks and Syphons. Upon the front cover is an illustration of their extensive works at Fort Wayne, while on the back cover is shown their factories at St. Louis. Their products are thoroughly illustrated and described. Among the leading lines shown are the Wayne Combination Washer, Western Star Washer, Anthony Wayne No. 1, No. 2 Anthony Wayne Washer, Wayne American Washer No. 5, Western Self-Measuring Oil Pump, cellar tank, oil tank, etc. In a note the company say: "We have the pleasure of presenting herewith our Annual Catalogue, embracing the different styles of Washing Machines and Self-Measuring Oil Pumps which we manufacture and sell. We shall be pleased to quote net prices on the same to dealers only, upon application, and we believe that it will be to

Digitized by Google

your interest to obtain our price and examine our goods before placing your orders elsewhere."

Sickels, Sweet & Lyon, No. 35 Barclay Street and No. 40 Park Place, New York, wholesale dealers in Hardware, cutlery, farm and garden tools, etc., have issued the fall edition of their 1895 catalogue, No. 10, a supplement to their spring edition, No. 9. The company explain, as heretofore in these regular publications, that "this Catalogue is not intended to represent our full line, but is issued every spring with a Supplement in the fall, more especially to call attention to seasonable goods, our specialties, and lines for which we are New York agents. We solicit, as heretofore, your correspondence for general Hardware, etc. We are also pleased to buy for our customers any goods that can be purchased in this, the greatest market of the country—in order that their purchases may be condensed and shipment of various items made together, thus saving expense and trouble." It is needless to say that the catalogue fully covers everything that can be enumerated under the headings above named, and is one that will find timely use in the hands of any dealer.

"The Architects' Directory" for 1895–'96, containing a list of the architects in the United States and Canada, classified by States and towns, giving the architectural associations to which they belong, has, the publisher states, been prepared with great care to secure accuracy of both name and location. It is published by Wm. T. Comstock, No. 23 Warren Street, New York, bound in red boards, gilt title, 16mo., price $1. In comparing this directory with the last year's issue a great multitude of changes are noticeable. The course of the last two years of dull business has had a marked effect on the profession of architecture. In the West, especially, the change has been great; many towns that had several architects to-day are unrepresented. Lack of business has compelled practitioners to seek other fields or different lines of employment. The list, by the many changes made, shows careful revision and an earnest effort to obtain the utmost accuracy.

Among the advance couriers of the bicycle season of 1896, there comes from the Julius Andrae & Sons Co., Milwaukee, Wis., a handsome little book which the title upon the artistic colored cover fully describes: "Full of Good Things." No other name would have done so well. On an inner page is this further explanation: "Something interesting to read; to while away a pleasant hour; to incidentally learn something about cycling, its pleasures, its healthfulness, its usefulness. The rhythmic motion and the fascination of it to the gentlefolk; teaching beginners to control the bicycle; an academy for that purpose; about Andrae Cycles which have never been known to disappoint." A great many attractive illustrations and some interesting reading matter follow. Then come descriptions of the Andrae Bicycles for 1896. It is a specimen of modern wheel literature that is worth sending for and preserving.

The Maryland Bolt & Nut Co., Baltimore, have issued a catalogue showing their full lines of bolts, nuts and washers of every description. These articles are not only illustrated, but the labels are printed in colors throughout the work, making a very attractive feature. The company say that their facilities for the production of high grade work are exceptional, as their factory is extensive, and fitted throughout with the most modern and improved machinery. They add that they use first-class merchant iron, and that their product will equal any in tensile strength and finish. They invite correspondence, and will take pleasure in quoting prices on their goods.

The Marion Tool Co., Marion, Ohio, have published a catalogue of the goods manufactured by them, among which are shingling hatchets, half hatchets, claw hatchets, boys' handled axes, adze eye nail hammers, farriers' hammers, tack hammers, tinners' snips, etc. The company say: "In presenting this Catalogue, we take pleasure in calling your attention to our several specialties. Our goods are all made of solid tool steel, they have a special temper and are warranted. All handles are first-class second growth hickory. We have by illustrations and descriptions endeavored to make everything plain, but we shall be glad to furnish further information when desired. We are enlarging and improving our plant, and having good shipping facilities, we will be able, in the future, to promptly fill all orders."

Under date of August 15th, the A. Tredway & Sons' Hardware Co., Dubuque, Iowa, have issued their fall circular No. 16, a work of some fifty pages, bound in colored covers, and thoroughly illustrating their large lines of Hardware, blacksmiths' supplies, tinware, cutlery, ammunition, etc. They call special attention to their list of "Wizard" specialties, which are special brands of hand tools manufactured for them only. They guarantee that any article of the "Wizard" brand will be found first-class in finish, quality and desirability of pattern. Almost everything that could be thought of under the above headings is illustrated in their circular.

The Lufkin Rule Co., Saginaw, Mich., are sending the trade a neat and comprehensive catalogue of their Measuring Tapes. These are all illustrated, so that the dealer can see at a glance just what each article is. Sizes and prices are given in full. Among the articles enumerated are their "Reliable" Steel Measuring Tapes, "Reliable" Frame Steel Tapes, Paine's Pattern Steel Tapes, "Rival" Steel Measuring Tapes, Pocket Steel Tapes, Metallic Measuring Tapes, etc. The goods turned out by this house have long since acquired a standard reputation in the market. Send for a copy of the catalogue.

John Stortz & Son, No. 210 Vine Street, Philadelphia, have issued a price list and illustrated catalogue of oyster knives and oysterman's tools. It seems to cover the field entirely. In a note they say: "We have been established over forty years, during which time we have made a specialty of these goods, and besides a knowledge of the requirements of the trade in various sections of the country, we have, by careful attention to every detail and long experience, been able to produce a line of oyster knives unexcelled for their superior quality and style."

The Lockwood-Taylor Hardware Co., Cleveland, Ohio, have issued a very complete catalogue of fifty-seven pages for their cutlery department. It contains illustrations of razors, pocket knives of all descriptions, table knives and forks, carving knives and forks, butcher knives, hunting knives, skinning knives, butchers' steels, scalloped edged knives, bread knives, cheese knives, kitchen knives, putty knives, and a full line of scissors and shears.

"Ten to One They'll Sell" is the catching little headline upon a leaflet sent out by W. C. Heller & Co., of Montclair, N. J. This describes their Heller Mail Boxes, which have become known in all parts of the country, and upon which Hardware dealers who have handled them have had large sales, accompanied by good profits. They also illustrate their Grip Wire Stretcher, which they manufacture.

The Asbury-Paine Mfg. Co., Trenton, N. J., have published a handsome and unique monograph describing and very fully illustrating their Self-Pouring Coffee Pot. The cover contains several artistic illustrations in colors. The little book is very attractive, and gives a great deal of useful information touching this new and successful article.

"Nail Philosophy" is the title of a neat little document sent to the trade by Patterson, Gottfried & Hunter, Nos. 146–150 Centre Street, New York. It contains a reading of character from the finger nails, with incidental suggestions touching the lines of goods carried by the house.

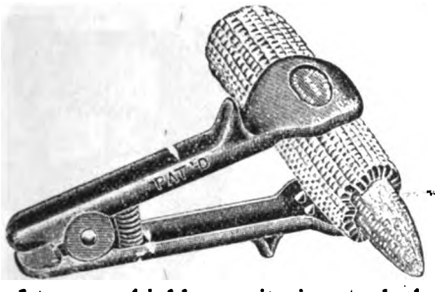
NEW GOODS IN THE MARKET.

If you have anything NEW, let the world know it by illustrating it in these columns.



NO CHARGE WHATEVER is made, direct or indirect, as our interest lies in showing the readers of "HARDWARE" where the LIVE manufacturers and wholesalers are, and what they are doing.

When your NOVELTY or SPECIALTY is ready, send us an Electrotype and descriptive matter, which will appear immediately.

The Hardwaremen everywhere read this department; it is to your interest to make prompt use of it.

Quick and Easy Corn Sheller.

The Star Mfg. Co., Canton, Ohio, are offering their quick and easy Corn Sheller in an improved form, as here shown.

It is referred to as a highly meritorious tool, the result of practical experience necessary for the requirements of a first-class article. It is claimed that it "will shell corn from a flat, or round cob, and, if desired, from the centre for seed. It works on a new principle, so easily that a bushel of corn can be shelled in ten minutes. It will not clog or choke, is light, substantial, well finished, and retails for fifty cents, with discounts to the trade. A more desirable article, or one that sells more readily at this season, and gives better satisfaction, with little outlay, has never been offered the trade." Write the above firm for particulars.

New Carpenters' and Tinners' Snips.

The Herbrand Co., Fremont, Ohio, are placing on the market two new styles of Snips for carpenters' and tinners' use. The blades of the carpenters' snips, Fig. 1, are fastened by a milled tubular rivet, no bolt being used, which

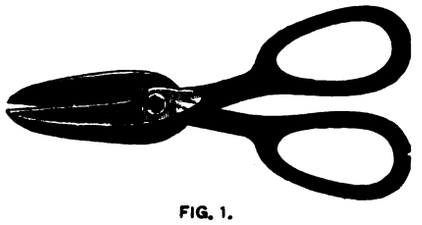


FIG. 1.

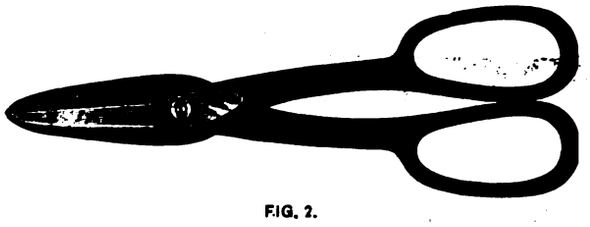
leaves an unobstructed surface on both sides, making them well adapted for cutting around valleys and flashings. In other respects they are like the tinners' snips, but are made in one size only, 7½ inches in length, 2½-inch cut, a convenient size to carry in a hip pocket. The tinners' are made in four sizes, 10, 11, 12 and 14 inches, with 2½, 3, 3½ and 4-inch cut, respectively. They are forged from solid



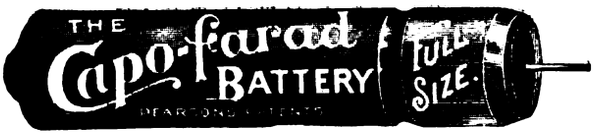


FIG. 2.

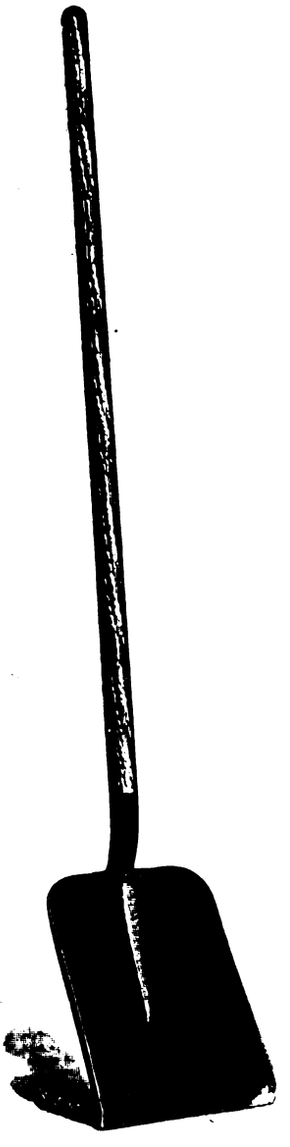
steel, faced full length of blade with cutlery steel. The method of fastening the blades is a more satisfactory one than the old style bolt and rivet, being a combination of sleeve and bolt, but simple and effective and reducing to a minimum the tendency to become loose. The goods are nicely finished and packed in boxes.

The Capo-Farad Battery.



Jas. J. Pearson, No. 27 Thames Street, New York, has recently invented and patented a battery which he states that for extremely small weight and dimensions, high power and longevity, eclipses all previous attempts in this direction. In appearance it is a cylinder of zinc 11-16 inches in diameter and 2¾ inches long. A hand drawn

silver wire protrudes through the hermetic sealing of one end, and is one electrode, the other being any part of its case or shell. It is called the Capo-Farad. One cell has a voltage of 1.20 with an amperage of 2.00. It is further stated that one will ring an ordinary door bell for over one and one-half years, or explode a mine through a detonator at 130 degrees an indefinite number of times, or work an ordinary household medical battery for 100 continuous hours. Two arranged in a tube with a spark coil make a portable gas lighter with an efficiency of 360,000 ignitions. Eight in series light a 1-C. P. incandescent lamp, and each cell weighs one and one-half ounces, and can be mailed under a two-cent stamp. The uses for high power in such extremely compact and ready form are practically universal. Mr. Pearson guarantees his manufactures to each consumer.

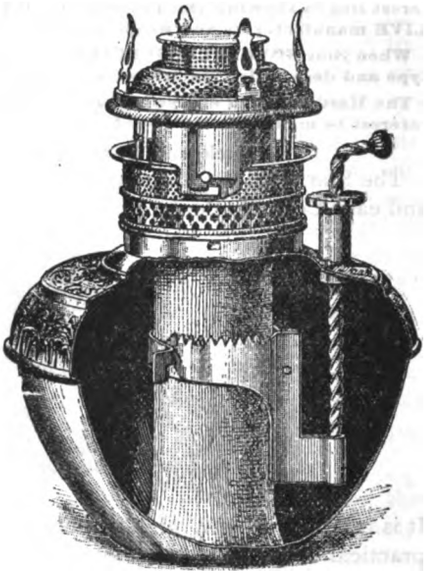
Wyoming Snow Shovels.

Very timely articles at this season of the year may be found in the line of Snow Shovels being successfully placed upon the market by the Wyoming Shovel Works, Wyoming, Pa. A sample of these goods is here shown. The company say: "In presenting our Snow Shovels to the trade, we are confident of supplying a long-felt want. A strong, steel shovel, correct in shape and of comparatively light weight. This Shovel is serviceable not only in removing light snow from smooth sidewalks, but in handling packed snow on rough grounds. Particularly is it adapted to railways. These shovels are made only in one size, and are finished black, unless otherwise ordered." Size: Blades, 11¾ inches wide by 14½ inches long. Total length of Shovel, 5 feet 3 inches. Price, $5 per dozen.

Diamond Wheels for Household Grinding.

The Buffalo Specialty Mfg. Co., Buffalo, N. Y., are introducing a specialty in the form of a Diamond Wheel for household grinding. The company state that the wheel is made of iron, handsomely finished in enamel and gold, and an ornament to the finest machine. The grinding surface is composed of crystal carborundum, such as is used by jewelers and in dentistry, which is put on to the iron surface by a new pro-

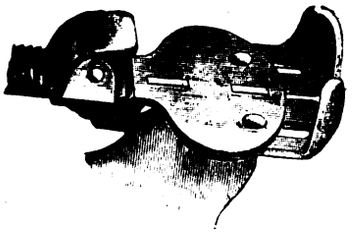
Digitized by Google



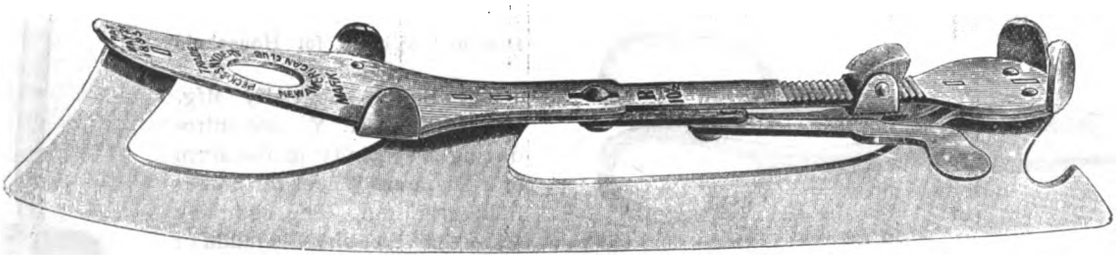
cess exclusively their own, "forming a beautiful, lasting, indestructible grinding surface that will not glaze, as is the case with emery, but cuts rapidly and smoothly, requiring but little pressure, and therefore will not heat and draw the temper of articles ground or polished. These wheels are easily attached to the balance wheel of any sewing machine, without the aid of bolts, nuts or

screws, or the removal of any part of the machine. The three pieces of corrugated rubber on the inside of wheel, as shown in the illustration, fit snugly over the balance wheel of the sewing machine, and being attached in three positions of equal distances, form bearings that are perfectly true, while the friction of the rubber keeps the wheel snugly in position, so that it cannot possibly come off, even if run at lightning speed. The two operations of attaching and detaching the wheel take but one second." The makers point out that the Diamond Wheels will grind scissors, bread knives, carving knives, mincing knives, fruit knives, cake knives, pocket knives, meat knives, cleavers, apple parers, ice shavers, manicure implements, can openers, screwdrivers, hatchets, chisels, jack planes, sickles, meat forks, lawn mowers, skates, needles, pins, cork screws, hat pins, awls, safety pins, darning needles, knitting needles, slate pencils and lead pencils. Orders for this useful device should be addressed to the company or to their Western representative, W. C. Brown, No. 45 La Salle Street, Chicago. Each wheel is neatly packed in an attractive case. Price, 75 cents.

Admiral Lamp.



Holmes, Booth & Haydens, No. 37 Park Place, New York, have brought out the Admiral Lamp as here illustrated. The wick lift has a threaded draw bar with wheel nut, so that a choice of two movements is offered for raising or lowering the wick. It can be accurately adjusted with a positive motion by turning the wheel nut or raised and lowered instantly by means of the draw bar. In rewicking the toothed spring wick holders are forced apart, permitting a new wick to be slipped over the tube. The chimney gallery, in addition to being an ordinary lift gallery for lighting, has a double bayonet catch by which it

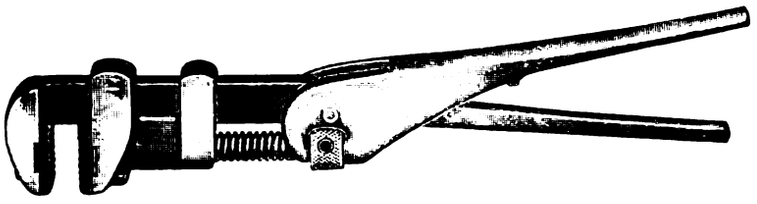


may be entirely lifted off for cleaning. This burner, it is said, is employed in all the manufacturers' lamps of this season's production.

New American Club Skate.

A. G. Spalding & Bros., No. 126 to 130 Nassau Street, New York, have recently brought out Peck & Snyder's New American Club Skate for the season of 1895, as shown in the accompanying illustrations. The leading feature of this skate is an entirely new heel clamp that will accommodate itself to any heel instantly. There is no screwing or adjusting necessary. After placing the skate in contact

with the heel and sole of the shoe, the clamp is pushed over the ratchet until it rests against the forward part of the heel, when bringing the lever back holds both sets of clamps rigidly against heel and sole, so that slipping is said to be impossible. Its extreme simplicity is the characteristic most strongly emphasized by the manufacturers. The skates are offered in five grades, viz.: Nos. 0, 00, 1, 2 and 4, ranging in finish from rolled steel bright to the finest quality highly polished and nickeled.



The Wright Wrench.

The Wright Wrench Co., No. 28 Bellevue Street, Worcester, Mass., are manufacturing a line of wrenches that

Digitized by Google

have been most successfully welcomed by dealers and users. The points which most readily commend themselves may be understood from a glance at the accompanying illustration. The makers especially recommend them for steam

fitters and plumbers. The material is carefully selected and is of the best character, and a great deal of care is taken in their manufacture. The company will be pleased to send detailed description, prices, etc., to all who may be interested.

Sand Trap.

Blumer-Doscher Mfg. Co., No. 315 Greenwich Street, New York, are marketing an improved Sand Trap, as shown in the accompanying illustrations. This contrivance is designed to intercept and retain sand raised with water in driven wells and to prevent injury to valves and other parts of the pump. Fig. 1 is a sectional view of the trap. The circular portion is 6 inches in diameter, outside measurement, and the pipe below to catch the sand is 6½ inches in length. There is a brass deflector plate, with four projections to hold it in position, allowing the water to be raised on all sides, while a discharge lip in the plate on the lower side leads the sand into the trap, the plate being at an angle of 45 degrees. Above the brass plate is a fine brass gauze screen which prevents the sand going above it, the downward stroke of the pump causing the sand to run down the incline into the trap. The gauze screen above the plate is placed between two washers, and when the cap is bolted down is kept rigidly in position. The position of the trap is such that it is easy to remove occasionally for cleaning out. The trap is also recommended by the manufacturers for use in connection with hand or steam pumps.

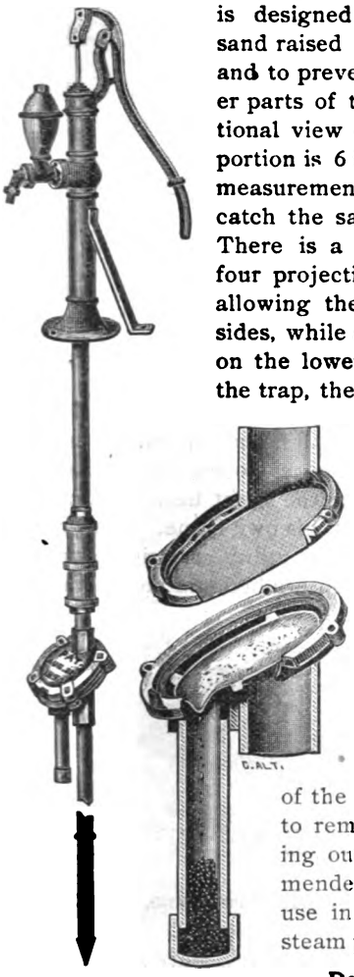


FIG. 2. FIG. 1.

Detonating Burglar Alarm.

John T. Ryan, No. 96 Chambers St., N. Y., is having manufactured the Sure Burglar Alarm, as represented in the accompanying illustrations. Fig. 1 shows the alarm full size. It is made of iron and steel, nickeled, and is charged with a .22 calibre blank cartridge, which is fired by the action of the lever releasing a spring hammer when door or window is opened. When not in use the hammer is locked securely down by an S wire hook. The lever is reversible, so that it may be attached to doors swinging either right or left. When placed on the window

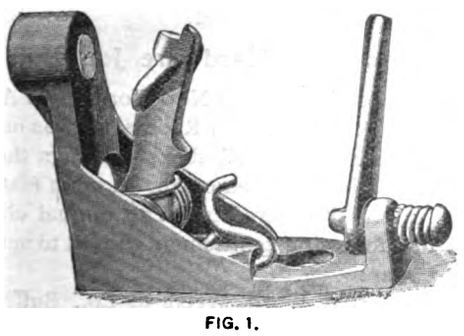

FIG. 1.

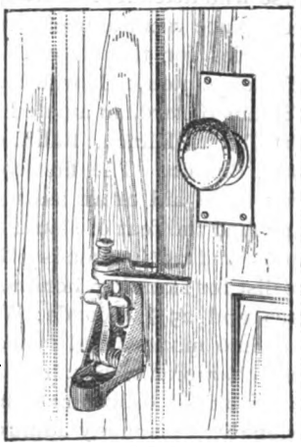

FIG. 2.

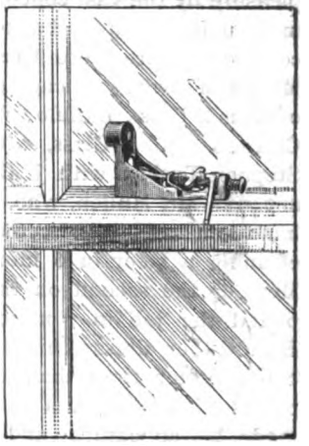

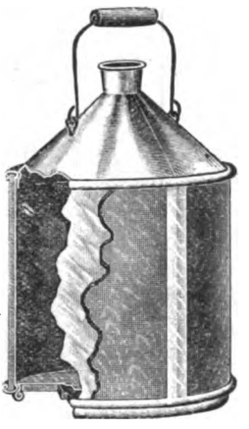

FIG. 3.

sash neither sash can be moved without giving an alarm. The point is made that being small and attractive in appearance, it does not disfigure door or sash, while the explosion of the cartridge not only awakens the household, but deters would-be thieves from going further, knowing their presence has been announced.

Utility Shipping Packages.

The Utility Mfg. Co., Milwaukee, Wis., are manufacturing Wood Jacketed Tin Cans as herewith illustrated. A portion of the covering is broken away so as to show the method of construction. The manufacturers say that although wood jackets are not new, their method of construction is a new departure. The body of the can, both top and bottom, is broadly flanged. The top and bottom are then placed in position and firmly clamped by a band extending around the body. The wood veneer is then placed around the body and in the bottom and the flanges curled over and down upon the veneer, holding it firmly in position, so that it is impossible for it to become broken or loosened in any way. This gives the can great rigidity and strength, makes a very neat and handsome finish and insures great durability. The joints, which are all soldered, are plainly in sight and can be mended if necessary. The cans, though light, are very strong and will stand harder usage than wooden pails, while the tin lining protects the contents.

We have received from the Brooks & Denton Co., New York, publishers of music, a very attractive sheet containing a descriptive waltz song and refrain, entitled "The Golden Rule." It is dedicated by John Queen, the author, to John E. Gaitley, of the Troy Nickel Works, Troy, N. Y. A portrait of a handsome little fellow adorns the title-page, and beneath it are the words: "John E. Gaitley, Jr." This dedication of this most excellent piece of music to a worthy leader among Hardware manufacturers of America, is a compliment to the trade at large.

George T. Sprake, for years buyer for the Hardware department of the Wyeth Hardware & Mfg. Co., St. Joseph, Mo., has tendered his resignation to take effect November 1st. Mr. Sprake will remove to Chicago, having associated himself with the Syndicate Hardware Co.

Incorporated: Waterloo Hedge & Wire Works, Waterloo, Iowa. Capital, $100,000.

Digitized by Google

The Foster Tools Were Winners.

The Buffalo Retail Butchers' Association recently held a big barbecue, which occasion will long be remembered with pleasure by the vast concourse who attended. Perhaps the most unique contest that took place was the beef dressing contest. There were five entries for this event: M. F. Mullen of Swift's Chicago (the champion); George Metzger of Klinck Bros., Buffalo; William Hazard, an amateur from Chicago; John Glass, with Christ. Klinck, Buffalo, and Stephen Tusher, with J. Dold, Buffalo. The first contestant was Mr. Mullen, who, with the aid of an assistant to hand him tools, etc., accomplished the feat of skinning and cleaning a steer in 6 minutes and 25½ seconds; George Metzger the second on the list for skinning honors, completed the job in 7 minutes and 25½ seconds; William Hazard then dressed his steer in 6 minutes and 13 seconds, being better time than the champion's, but he lost on points; John Glass, a slender lad of only nineteen then made his appearance and delighted his many admirers by beating all competitors in 5 minutes and 59 seconds. Mr. Glass used knives, steels, etc., manufactured by Foster Bros., for whom John Chatillon & Sons, Nos. 85 to 93 Cliff Street, New York, are sole agents.

"G. & B." Separable Flower Pot Stands.

The Gilbert & Bennett Mfg. Co., No. 44 Cliff Street, New York, No. 148 Lake Street, Chicago, and Georgetown, Conn., are now putting on the market a line of new Flower

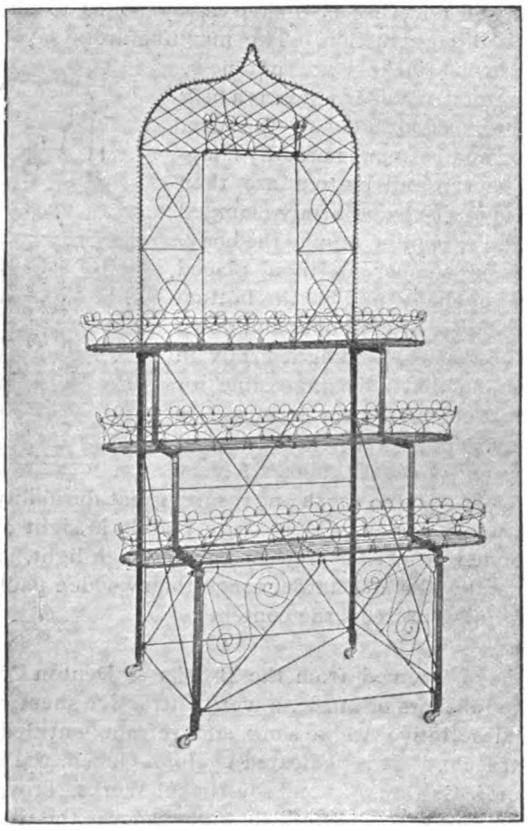

FIG. 1.—"G. & B." NO. 187 SEPARABLE FLOWER POT STAND SET UP.

Pot Stands. The parts are separable, so that the stands can be compactly boxed. They are making several designs, two of which are shown in the accompanying cuts. The frames are constructed of steel, "T" shape, which affords the greatest resistance from all directions, to which the shelves, braces and trellises are attached with clamps. Each stand is shipped in a separate box. It can thus be preserved in good condition, and none of the parts will be mislaid. From the fact that the Stands can be stored in boxes, which affords protection from dust, it is possible to complete them weeks in advance of shipment, giving ample time for the paint to become dry and hard. Every merchant who considers the annoyance and often loss that attends the trade of too many wire stands, will regard these with satisfaction. "They are carried at one-third the freight rate that is charged for stands set up and not

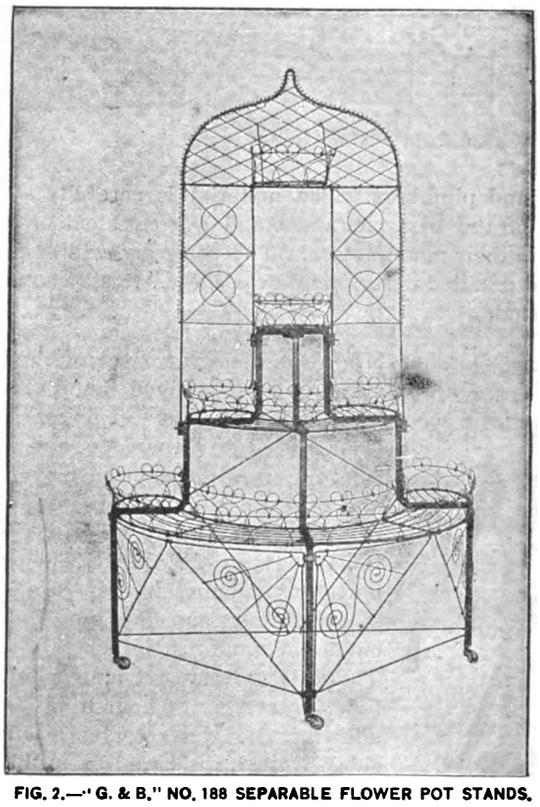

FIG. 2.—"G. & B." NO. 188 SEPARABLE FLOWER POT STANDS.

boxed; will not be damaged in transit; occupy small space; sales can be made from samples, and in many cases the Stand can be delivered to the customer as originally received, who will not object to the slight task of unpacking and connecting the parts at his own home. In every detail, ample strength, beauty and utility of design, attractive and durable finish, have been studied and incorporated in

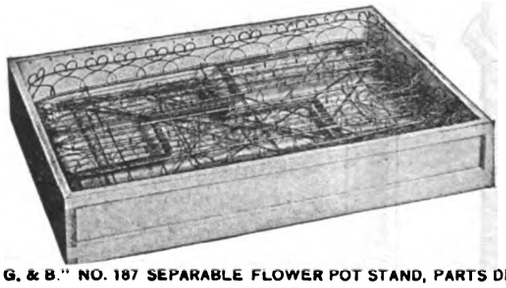

FIG. 3.—"G. & B." NO. 187 SEPARABLE FLOWER POT STAND, PARTS DETACHED AND BOXED.

each Stand to the end that they shall be satisfactory to the ultimate purchaser, and practicable for the merchant to regularly keep in his warerooms and thus supply his customers promptly. The company will be pleased to mail on application a descriptive catalogue, which gives full information."

New York Hardware Jobbers.

The annual meeting of the New York State Association of Hardware Jobbers, held in Rochester, was one more of the many pleasant and profitable gatherings that this important organization have enjoyed. A main feature under discussion was that of credits. The annual election was held, and the following gentlemen chosen to serve during the coming year:

President, Hobart Weed, Weed & Co., Buffalo; Vice-president, F. A. Barker, Barker, Rose & Gray, Elmira; secretary-treasurer, E. J. Weaver, Weaver, Palmer & Richmond, Rochester.

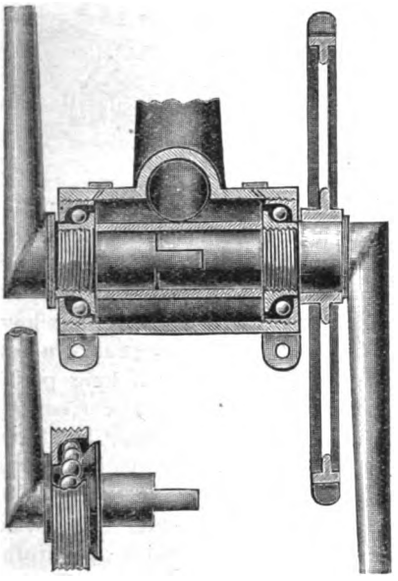
ILLUSTRATED BICYCLE NOVELTIES.

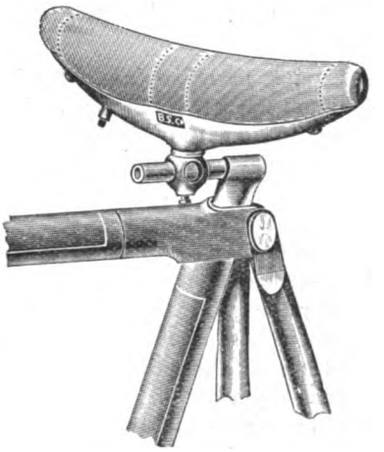
Woodruff's Perfect Ammonia Gun.



The Ammonia Gun shown in the illustration is one of the specialties manufactured by T. L. Woodruff & Co., Bridgeton, N. J. The manufacturers state that it is a perfect instrument in every way. The advantages enumerated for it

are: Positively will not leak, has no spring to press or caps to remove, and will shoot from five to twelve times for fifteen to thirty feet with one loading. It is intended for the use of wheelmen as a protection against dogs.

The Gard Detachable Crank.



William E. Gard, No. 30 Park Place, New York, has invented a bicycle crank which is here illustrated. The Gard Crank consists of a divided shaft (attached to the arm) with outwardly facing bearing cones independently attached to each part of the shaft; and inwardly facing bearing cones which screw into the bottom bracket. By this construction it is only necessary to unscrew the outer cone, and you have removed in a twinkling from either side the crank with balls and bearings attached so that the balls cannot drop out. Some of the advantages put forward for the new Crank are as follows: Anyone can remove the crank with bearings, clean and replace them inside of five minutes without soiling the fingers, or the possibility of losing a ball or any part; the most narrow tread possible is to be attained; the obnoxious crank pin and almost equally vexatious retaining nut entirely abolished; the bearings on either side of bottom

bracket may be removed in a moment without molesting the other side or removing the chain; most simple yet most practical construction; thorough tests prove that strength and rigidity need not be sacrificed; individual variety and beauty of design may be indulged without changing the material advantages of the invention, and lightness and easy running are assured. Mr. Gard has made arrangements with the Southington Cutlery Co,, Southington, Conn., to manufacture and sell his crank, reserving to himself the right to license five concerns who manufacture their wheels complete. The device is patented in England, France, Germany and Belgium, besides the United States.

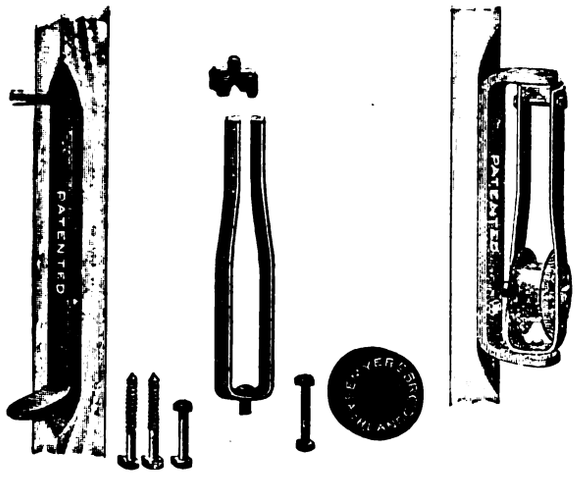
The Bunker Saddle.

The Bunker Saddle Co., Nos. 208 and 210 Lake Street, Chicago, Ill., have lately begun the manufacture of a pneumatic transverse saddle of great merit, which we illustrate herewith. The radical departure in this saddle over all others is that it is used in a transverse position instead of being ridden astride. This feature is highly recommended by physicians, as it precludes any possibility of chafing, weakening of the muscles or other injury to the rider. On account of the perfect freedom of knee action, nothing being interposed between the limbs, there is no friction or deflection of the muscles, and the riders of the Bunker saddle have developed great speed. In construction, the best of materials have been employed. The supporting plate and attachments are of steel, surfaced with copper nickeled.

The body portion is made of ooze calf skin, linen lined and secured between the supporting plate and an interior plate; this interior plate being padded on its inner surfaces, and firmly bolted to the supporting plate. An inflatable rubber case forms the air cushion. This is fitted with an inflating valve of standard size, and made to fit the various styles of tire pumps. The Bunker Saddles are made in several sizes, varying from 11 to 14 ounces, with attachments for fitting the various styles of seat posts. They are adapted for both road and racing purposes, the 11-ounce saddle being for track use and the 14-ounce for the road.

A Boom in Buffing Wheels.

"Business is booming, and we are compelled to run nights until 9 P.M., to keep pace with our orders, and we are adding new hands as fast as we can break them in."



This was the pleasant statement made to a HARDWARE reporter by a member of the firm of Divine Bros., Chadwicks, N. Y., manufacturers of high grade Buffing Wheels. He continued: "I started on an Eastern trip about two weeks ago, and met with such success that I was obliged to come home after visiting about one-half the places intended, as we were swamped with orders until we did not dare to take any more. I struck one of the largest Hardware concerns in the East, was denied admittance to the buyer by an officious clerk, but on seeing him and showing the goods, was handed a 'sample' order for 1400 sections, without asking for it. In fact, F. W. Gesswein, our New York agent, No. 39 John Street, before making the deal to handle our goods, told us that it would be a genuine pleasure to sell such goods as ours, having become well-nigh discouraged with the buffs on the market.

"Our Ad. in HARDWARE was the best investment we ever made in the advertising line," said Mr. Divine in conclusion.

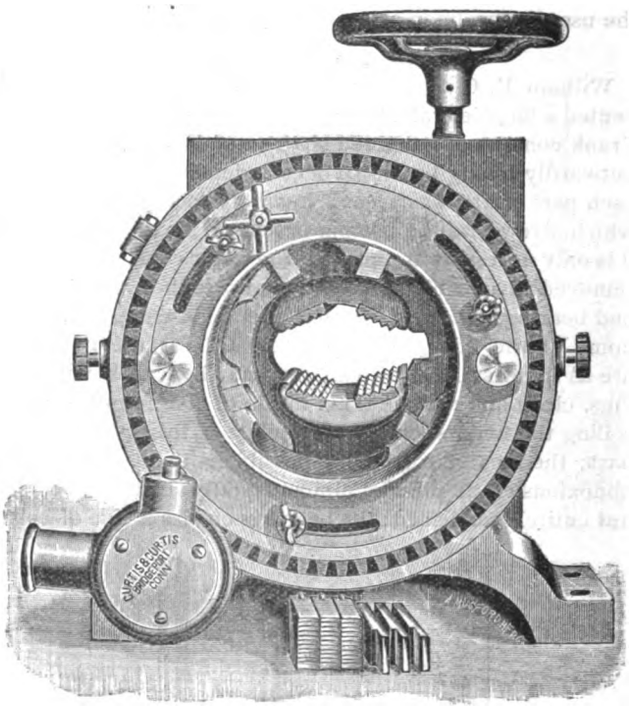
Myers' Patent Farm Gate.

F. E. Myers & Bro., Ashland, Ohio, are placing on the market a new Farm Gate Hanger, which is a special construction, and, as the makers say, "a device that meets a long-felt want." A very good idea as to its parts, etc., may be gained from an examination of the illustrations here shown, and in detailed description the manufacturers

say: "It is the most practical device for hanging and operating a common farm gate known. It is the easiest article to sell and the most satisfactory to buy. The price is so low and the Hanger so simple and perfect in every respect that almost every farmer becomes a purchaser as soon as he sees it. It is designed, as the cut clearly shows, for a style of gate that every farmer has or can make cheaper and easier than any other. The cuts show how quickly and easily the gate can be hung and raised to clear deep snow or other obstructions when desired. It is double pivoted; supports a gate perpendicularly, and is so strong and simple it cannot get out of order. The weight of the gate hangs on the centre and at its strongest point. The Hanger is made of steel and is fastened near the centre of the post with two lag bolts and does not project or have weak points. It is put together with bolts; adjustable for any length or weight of gate and adapted for any State or farming community. It can be sold cheaper than any other and throughout the entire season at a profit regardless of what others do, as it is fully protected by letters patent." They further explain that "all the material required to



erect a Myers Patent Farm Gate" is as follows: One Myers Patent Hanger, 5 boards 14 feet long, 6 boards 4 feet 8 inches, 2 posts. A note sent to F. E. Myers & Bro., Ashland, Ohio, will bring all needed facts as to prices, etc., to enable any dealer to handle these goods to his own profit and the satisfaction of his customers.

The management of the Pennsylvania Bolt & Nut Works, Lebanon, Pa., have notified the employes in the screwdriving department that their wages have been increased ten cents per thousand bolts, which is equivalent to a ten per cent. advance.

Improvement in the Forbes Patent Die-Stocks.

Probably there is no tool or machine better or more favorably known to all users of wrought iron pipe, than the Forbes Patent Die Stocks, manufactured by Curtis & Curtis, Bridgeport, Conn., for thirteen years. "When these machines were placed on the market in 1882," it is said, "they were a radical departure from anything then in use, and they had a long and hard battle to fight in order to win recognition, but their merits were at last appreciated by the trade generally, until now they have become the standard tool for cutting and threading pipe." But "good" was not enough for this firm, who have kept at work making improvements from time to time as experience has shown it possible. These improvements have often been at great expense, but they always have been accomplished without advancing the price of the machine to the trade. "There has always been, however, one disadvantage to this style of machine which until now has resisted every effort to correct it. The chief support for the die-carrying gear is derived from a bearing made between the outside of the gear teeth and the inside of the shell. On to this bearing dripped the oil laden with chips and grit from the pipe, which

caused a grinding operation which soon results in the gear becoming loose in the shell. The gear thus being allowed to tip slightly, a drunken thread is the result. When this state of affairs occurs, as it is pretty sure to do sooner or later with machines of this style, repairs have been impossible except by supplying a new gear or a new shell, which makes it very expensive. For a long period the makers have been looking for some way to correct this great objection to this class of machines, and at last have discovered a method which by its very simplicity makes one wonder why it has not been thought of before, but as they have been able to cover it with patents, it must be put down as one of those simple things which constitute the best kind of inventions. They have discovered that by having a long narrow slot in the top of the shell, with a lug on each side, connected by a screw, that they were able to draw the shell together sufficiently to take up any wear that the gear might make. Even a very loose gear can be made very tight and a good even fit maintained at all times, ensuring perfect threads." We show herewith a cut of their No. 2 Hand Machine, range, 2½ to 4 inches, showing the slot and lugs on the top.

HARDWARE is printed for men now on earth;

BICYCLE PROPHECIES FOR 1896.

OVERMAN WHEEL CO.

EDITOR HARDWARE: While there is no immediate prospect of too many good bicycles being made, it is very sure that the crop of rubbish will far exceed the demand.

Most bicycles are made to sell, not to ride. Many little makers are buying the pieces and sticking them together, and calling them bicycles.

Good bicycles can be built only with good facilities and capital, and long experience. Hardware dealers can get themselves into trouble faster than they can get out of it by selling such stuff to riders, who invariably expect them to perform as well as the best work.

When a Hardware dealer wishes to undertake the bicycle business as a side issue, he should fortify himself by obtaining the agency for the best bicycles, one which will make friends for him instead of lose friends.

Hardware dealers will appreciate the difference between crucible steel and machinery steel. Our appreciation of this difference is one of the many reasons for our success.

We were the first American makers of the present universal type of safety bicycles, and have therefore had a longer experience with this machine and know what its needs are. A. H. OVERMAN, President.

Chicopee Falls, Mass., September 27th, 1895.

EAGLE BICYCLE MFG. CO.

EDITOR HARDWARE: Your favor received. Replying would say, that a large proportion of our machines have been marketed to the Hardware trade of the United States. We have found that Hardware dealers who take the matter up with the right spirit and endeavor to become thoroughly posted regarding the details of the business before entering it largely, make the very best of agents. Some Hardware dealers who have been disappointed in their bicycle business are themselves to blame. Many of them have endeavored to branch out largely into this line of trade without first getting thoroughly conversant with the details of the business. Under these circumstances they have been subjected to a great deal of annoyance by not being properly fitted to take care of their customers. On the other hand, many of the most successful dealers in bicycles in the United States are Hardwaremen who have taken up the business thoroughly and consistently.

Yours truly,

THE EAGLE BICYCLE MFG. CO.

C. S. DIKEMAN, Secretary.

Torrington, Conn., September 28th, 1895.

W. H. WILHELM & CO.

HARDWARE: Your favor received. In regard to how many bicycles will be manufactured in 1896 will say, we do not know. We figure ours at 20,000 to 25,000. In regard to prices would say, prices will be higher, In regard to the industry being overdone would say, we do not think it will be overdone. Yours truly,

Hamburg, Pa., September 24th, 1895. W. H. WILHELM & CO.

MONARCH CYCLE MFG. CO.

EDITOR HARDWARE: Replying to your recent favor with reference to bicycle business would say that the probable production of bicycles in America for 1896 will be 700,000 or 800,000.

From 450,000 to 500,000 were manufactured in 1895.

Probably 20 per cent. of the bicycle business is handled through merchants who deal in Hardware.

There will probably be no change in list for standard high grade machines next season.

We do not feel that there will be any over production from the fact that the increase in demand will probably be more than increase in product, in view of the fact that manufacturers will not be able to obtain a sufficient amount of material to increase the product over 1895 in excess of about 35 per cent. or 40 per cent.

The output for 1896 would probably exceed 1,000,000 bicycles if it were possible for all manufacturers to obtain the necessary material. Yours truly,

MONARCH CYCLE MFG. CO.

L. M. Richardson, Ass't Manager.

Chicago, Ill., September 25th, 1895.

GRAND RAPIDS CYCLE CO.

EDITOR HARDWARE: Replying to your favor of September 16th., as to how many bicycles we think will be manufactured for the season of 1896. If it was possible to get the raw material to manufacture the stock, and possible for the manufacturers of bicycles to get the special bicycle machinery required for large outputs, a conservative estimate would be 1,000,000 wheels, but the writer is of the opinion, and this opinion is founded on the very best of evidence, that raw material will be so scarce, and the demand for it so great, the prices so high, that many makers will cut down their estimated output several thousand wheels, and that the actual increased output over 1895 will not reach a maximum number of 750,000 wheels. It is almost impossible to get any kind of machinery and get a promise of delivery before next spring. Some manufacturers of machinery will not accept any orders at any price for delivery before February 1st. Some of the manufacturers of parts began refusing to accept any more orders sixty days ago. All this indicates the desire for a very large increase in supply, but will be limited owing to the conditions and circumstances.

You ask how many wheels were manufactured in 1895, A very conservative estimate of the number of wheels made in 1895 is from 400.000 to 450,000. We have no accurate means of estimating the number of wheels marketed by the Hardware trade during the past year. Perhaps 25 per cent of our output has been handled by the Hardware trade.

Relative to prices for next year, the list price will, probably, remain the same. At least we can see no tendency on the part of any manufacturer to reduce his list prices. The net prices in the case of extremely low grade "jobbers' wheels" there is an upward tendency, and we believe a number of manufacturers of this class of goods have already sold their output at a slight advance over last season. The manufacturers of extremely fine, high priced goods may possibly shave their net prices a trifle if they have to, but under the existing circumstances, we doubt if it will be necessary for those who can afford it to make any lower prices, because they will not have to do so.

You wish to know if we think there is any danger of the bicycle industry being overdone. There is, and the time is not very far distant, when manufacturing of bicycles will be extremely dangerous for people to invest their money in. The trade is in the condition of a town that has been boomed to death, and sooner or later the bottom will fall out of this boom. We do not mean by this that the demand will be any less, but the supply will increase so much more rapidly than the demand, and the competition among makers will be so sharp as to prevent any possible chance of making it a profitable business for the manufacturer. Of course, the more this condition of affairs continues, the more there is in it for the dealer.

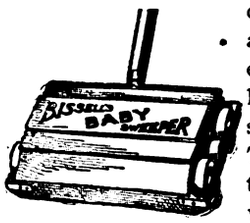
No time in the history of the trade has there been the opportunity for the Hardware and bicycle dealers to make the money there is at the present time. Many of them could have made a good deal more money than they have, but they are not satisfied to get a good profit on an article which is so hard to get and easy to sell, but seem to think they

Digitized by Google

should sell it at dry goods profits. This will never do in the bicycle business. A dealer should realize at least 30 per cent. on every wheel he sells. He will find even at this profit at the end of the year a good portion of it has been eaten up in various ways he did not figure on. The manufacturer has met with all of these extravagant expenses, and for this reason in many cases realizes the impossibility of manufacturing and selling a wheel at an extremely low price, and realizing a legitimate profit on the same.

The bright, far seeing Hardware dealer will buy his bicycles direct from the maker, and handle them under the maker's name, even if he is obliged to pay a slight advance over the jobbers' prices on an unknown product, manufactured possibly by a maker who has never had any experience in the business, as makers who have had experience do not have to sell their wheels to jobbers under other names than their own. The main object in selling wheels without the name of the maker is to avoid the guarantee, and this is just the point that Hardware dealers should look to, and take carefui pains that he gets goods direct from the maker, or at least with the manufacturers' name on them.

Trusting this information is what you want, we are,



Yours very truly,

GRAND RAPIDS CYCLE CO.

Grand Rapids, Mich., September 18th, 1895.

Bissell's "Child's" Carpet Sweeper.

The Bissell Carpet Sweeper Co., Grand Rapids, Mich., are manufacturing a novelty for holiday sale, in form of a Carpet Sweeper called the "Child's," illustration of which is here given. The manufacturers say: "This is unquestionably the prettiest, most durable, most useful toy carpet sweeper ever put on the market. They are little beauties and are just as good sweepers as they are good lookers. They contain our famous broom action, making them sweep, and sweep well. The 'Baby' Bissell is a toy that every parent will want—will want because it contains to the fullest possible extent the four points always looked for but seldom found in a child's gift, namely, usefulness and durability, beauty and cheapness." Price, $8 per dozen. Retail for $1 each.

The Wesson-Nivison Mfg. Co., Cortland, N. Y., are preparing for a busy season in the way of bicycle manufacture. They kindly informed a representative of HARDWARE upon a recent visit that all their machinery was of the latest and most improved kind. They are making a new tubular hub of their own invention—something light, and which they refer to "equally as durable as any in use." They are prepared to furnish this to other makers of bicycles. It is patented. They are making the "Loyal" wheel which lists at $100. They use large tubing for the frame, tubular hub, and a new device for holding the handle-bar, doing away with the clip and bolt: also have a new style of seat-post fastener, making it easier to adjust. They are offering other attractive features for the season of 1896.

E. Bissell, Son & Co., No. 12 Murray Street and No. 15 Park Place, New York, announce for Tuesday, Wednesday and Thursday, October 15th, 16th and 17th, a large combination and unreserved sale of Granite Enameled Iron Ware, Peerless Enameled Ware, Blue and White and Crystal Ware, by order of the St. Louis Stamping Co. and the Lalance & Grosjean Mfg. Co. Upon page 40 of this issue are all the details of this great and attractive sale.

A company for the manufacture of a self-sealing oil can has been organized at Toledo, Ohio, by Louis O. and Ala H. Brown. The invention is their own.

Review of the Markets.

Hardware: The conditions governing the trade are about the same as last writing. Prices have been advanced on several lines of goods, but no large or startling advances need be looked for, unless the increased traffic, caused by the transportation of the enormous crops, reported in some parts of the country, induces the railroads to purchase rails and other supplies that they have done without during the years of the depression. It may be expected that all goods, into the construction of which Copper enters, will be dearer, as the price of Copper has advanced in all about 30 per cent. Jobbers generally are reaping benefits from the advances, and in some cases where they have accumulated stocks in anticipation of advances, they are enabled to cut prices, and sell below the manufacturer and still make a profit. The trade in Builders' Hardware in New York is especially good, and it may be said that there is more business of this character in sight than there has been for some time past. Steel Billets have gone about as high as is safe, in view of foreign competition. A great many jobbers complain that collections are far from satisfactory.

Nails: From the present condition of the market no further advances are looked for this month, although it is rather dangerous to predict anything in reference to Nails. The demand is not nearly as large as it has been, and fewer Nails will be manufactured this month than any month thus far in the year. The output of Nails is, however, so well regulated by the association, that there is a ready sale for the quantity manufactured. The policy of the association is to allow only the manufacture of such a quantity of Nails as the market requires. The Nail Association has been criticized for putting up the price of Nails, but the prices for October, 1895, are not so very far in advance of the prices for September, 1891.

Wire Nails: Prices remain unchanged and are as follows: Carload lots or mixed cars, $2.25 per keg, base, f.o.b., Pittsburg; less than carload lots, $2.35 per keg, base, f.o.b., Pittsburg. To jobbers taking from one mill within one calendar month 1000 kegs and over, 5 cents per keg rebate will be made. On contracts direct shipments of less than car lots of 24,000 pounds of Nails an extra 5 cents per 100 pounds will be charged. Wire Nails in carload lots on dock in New York are quoted at $2.40, and small lots from store are held at $2.50.

Cut Nails: Consumption seems to have been somewhat checked by the recent advances. Prices remain the same. We quote as follows: Carload lots or over, $2, base, Pittsburg delivery; less than carload lots, $2.05, base, Pittsburg delivery. To jobbers taking from one mill within one calendar month 500 kegs or over, 2½ cents rebate per keg is allowed, and on 1000 kegs 5 cents rebate per keg is made. For half kegs 10 cents extra will be charged. New York quotations are as follows: Carload lots on dock, $2.15; small lots on dock, $2.26, and small lots out of store, $2.30.

Nuts and Bolts: The National Association of Bolt & Nut manufacturers held a meeting in Cleveland on September 25th and decided to make an advance of from 5½ to 7 per cent. The advance, though slight, has been made necessary by the recent advance in iron and will take immediate effect.

The Russell & Erwin Mfg. Co., Nos. 43 to 47 Chambers Street, New York, have recently issued a revised discount sheet under date of August 15th. In spite of the date it embraces all of the changes made up to date on the large line of goods that the company offer to the trade. It will be seen that all the advances that have been made are laid before the trade in this manner. The company say: "On account of the unusual liability now existing to sudden fluctuations in the cost of materials and labor, all prices are subject to change without notice."

Powder: E. I. Du Pont Nemours & Co. announce a re-

Digitized by Google

vised price list of Gun Powder, taking effect October 1st. A discount of 10 per cent. is allowed on rifle and sporting powders in lots of 1000 pounds and over, one sale, one delivery and to one consignee. Any less quantity, net. Blasting, mining and shipping, net. Two per cent. cash discount is allowed on all bills paid within ten days.

The Hazard Powder Co,, Nos. 44 to 48 Cedar Street, New York, make the following announcement, under date of October 1st: "Please notice: We hereby withdraw the temporary prices of 4th ult. made on our kegs, half kegs and quarter kegs of Kentucky Rifle Powder, and now return to the old list."

Putty: Prices are the same, the quotations being $1.40@ $2.25 for goods of the better quality, according to style of package and quantity.

Linseed Oil: The following quotations are made by the Dean Linseed Oil Co.: Raw, 44 cents per gallon; boiled, 47 cents per gallon; Calcutta raw, 48 cents per gallon.

White Lead, dry or in oil, and Red Lead and Litharge in kegs: Prices are governed by the National Lead Co.'s list and are as follows: In lots of less than 500 pounds, 6 cents net; in lots of 500 pounds and over, 5½ cents; Red Lead and Litharge in barrels and half barrels, ¼ cent per pound less than price in kegs.

Clapp & Co., bankers and brokers, New York, in their weekly letter, say: "Nothing is any stronger than its weakest part. We shall know the strength of our currency system when it has been thus tested. The locking up of legal tenders in banks and treasury may bring about the desirable test. Silver certificates when presented at the United States sub-treasury should be redeemed in gold. Any refusal would be liable to bring about another object lesson in American finance. The good faith of the nation is pledged to redemption of all the Government's demand paper in gold. The country is on the road to further inflation, based on good crops and prices, and evidence that this is the unalterable policy. Straws: The Prussian 4 per cent. consuls, or a debt of $900,000,000, or $53 per capita, is to be refunded at 3 per cent. The United States net interest bearing debt at present is less than $10 per capita. It is estimated that all the cotton consumed in the world could be raised in the State of Texas. European statisticians estimate this country's wealth greater than that of any other. English investors have 360 million of defaulted securities of South American countries, 272 million being Argentine, provincial and municipal loans. The Rothschilds, who carry 2420 millions securities of various countries, are reported saying American investments are the best in the world. The Bank of England discount rate has continued 2 per cent. for nearly two years. Their reserve is 60.45 per cent. against 70.96 a year ago. England's mercantile marine aggregates a tonnage of 9,585,000 tons; Germany, 1,485,000. Poor's Manual estimates the tonnage mileage in 1894 was 82 billion miles; in 1882 it was 39 billion miles. That the average rate for carrying one ton one mile then was 1.236 cents, and last year it was but .851 cents, or 31 per cent. decrease."

THE DAVENPORT TRADE.

The Sylvan Steel Co., referred to in one of our letters published in HARDWARE a year ago, and who finally commenced operations about December 15, 1894, report that they have made a handsome profit the first year, or rather the first three quarters of their first year, and feel so much encouraged that they have decided to enlarge their works, and will, by January 1st, employ not less than five hundred workmen.

Work has been commenced on the government bridge, and the Phœnix Bridge Co., who have the contract, will no doubt push the work to completion at the earliest possible moment, and we hope to see it finished before the close of 1896.

A year ago Wire Nails were selling at $1.25 per keg; to-day they are bringing $3 to $3.10. Farmers, a year ago, received 51 cents per bushel for corn; to-day it brings 30 cents.

If you will use your pencil a moment you will notice that only one year ago two and a half bushels of corn would buy a keg of nails. In agriculture in Iowa "Corn is King;" in Hardware, Wire Nails are the most staple articles; now your same pencil will show you why trade is dull, but it will be a more difficult task to explain to your readers in the West why it is just, through combinations, associations or conspiracies, or by whatever name you choose to call them, to change the relative values of staples to such an extent in twelve months.

Linseed Oil declined until 36 cents for raw was reached; an advance in seed, together with a speculative demand, has sent the price up again three cents, and the market is very firm at that figure with further advances in prospect.

We have a new list and higher prices on augers and auger bits.

Sheet iron and goods manufactured from sheet iron are scarce, causing great inconvenience to small buyers of these seasonable articles, who buy only as they want, from week to week. Carriage bolts have again advanced and stamped tinware has followed suit.

The mercury dropped with a chilling thud one day last week thirty degrees in fifteen minutes, and life is again worth living. The annual political campaign is on, and the stump orator goeth about through the land, and the sound of his voice is heard in every town and hamlet thereof, occupying much valuable time of the good people who otherwise could be more profitably employed in buying or selling Hardware. SICKELS, PRESTON & NUTTING CO.

THE ST. LOUIS TRADE.

The volume of business for September did not come up to the expectations of the jobbers in the Western cities. This can be accounted for by the large business done during the month of August by all Western houses. The buyers of Hardware think the advances in staple goods have been too rapid, and consequently are selecting only such goods as they are compelled to have to keep stock complete, being fully assured of having their wants supplied through their regular source when in need. The staple crops in the West are immense, but the value of the farmer's production realizes him very small returns. It takes many bushels of corn to pay for one keg of nails at the prices now ruling. From the standpoint of the jobber, we think the manufacturers of all the products of iron have raised their prices quite enough, and they should be held where they are for some time and not keep up monthly or weekly advances. A. F. SHAPLEIGH HARDWARE CO.

THE CLEVELAND TRADE.

During the past two weeks the volume of trade has not been as satisfactory as it should be. This would seem to indicate that the stocks in the hands of retail dealers which had become very much depleted have been increased to a point where they do not feel the necessity of making them any larger, and that the demand from their customers has not been sufficient to warrant further addition.

The high price of Iron and Steel tends to check building operations, and prevents the carrying out of some plans that had been laid.

The sharp advance in steel makes a very considerable difference in the cost of building, and naturally causes those who are building with the idea of investment to hesitate before so doing. Notwithstanding this apparent lack of consumption prices are well maintained, and we feel that perhaps the conditions that we have just described are only local, as we know that the crops in the territory tributary to this city have not been so phenomenal as has been the case in other sections of the country.

Seasonable goods are commencing to move in somewhat more satisfactory quantities, and as the weather grows

Digitized by Google

cooler we have no doubt that the general volume of business will be increased.

Collections are satisfactory and the general outlook of business is fully as good as it was a year ago.

McINTOSH-HUNTINGTON CO.

THE PITTSBURG TRADE.

An excellent object lesson of the products and the needs of Pittsburg is presented in our river harbor at present. There are large boats and barges lying there containing over thirty million bushels of coal (about 1,200,000 tons) awaiting a rise in the river to enable them to reach their market in the cities along the lower Ohio and Mississippi rivers. The annual run of river coal approaches one hundred million bushels, but on account of the low stage of water in the Ohio for months, it cannot be used and the coal accumulates. Our need is a lock and dam improvement of the river by the government. This would be of inestimable advantage to millions of people in the Ohio and Mississippi Valleys, and primarily to Pittsburg.

We are also agitating for a deep water canal to Lake Erie. This has been thoroughly examined by competent engineers and pronounced entirely practical. If it can be accomplished, the shipment of coal and iron ore will make an immense traffic now only partly done by three lines of railroads.

The largest consumers of Iron this season have been the constructors of large city buildings. Immense tonnage of structural steel has gone into these new class buildings in all our large cities. It is a puzzle to some people where all the Iron has gone this year, but when we consider the quantities used for building, for street car rails and the growing general demand of the country, we can see that the present active condition of the Iron market is likely to continue. Next year the railroads are bound to be larger buyers, so that we look for good times in Iron and Steel for at least a year to come.

The first rush among Hardware manufacturers has about spent itself, and they will now look at a jobber and talk prices. Orders are being booked for Fence Wire as far ahead as February 1st.

Our coal and coke workers have arranged their wage scale for a term ahead, the men securing a fair advance. This will insure steady working in these industries for some time to come.

The window glass trade, a very large Pittsburg product, is in good condition, factories all well employed, and prices firmly held at the recent advance.

LOGAN, GREGG & CO.

THE ROCHESTER TRADE.

We wish we might report a more satisfactory condition of trade in this territory. The very light fruit crop which prevails in our territory has a tendency to make retailers feel blue, and as a rule, they are buying on the hand-to-mouth principle. The advance prices are being maintained with but few exceptions. Customers are buying very cautiously and collections are not satisfactory. Truly the much talked of boom, if it has struck us at all, has struck us very light. Local retail trade is very statisfactory.

WEAVER, PALMER & RICHMOND.

THE CHARLESTON TRADE.—HARDWARE: PAST AND PRESENT.

In the not very distant past, but sufficiently long to be beyond the memory of a majority of dealers, the city of Charleston supplied the wants of the entire State of South Carolina, fully one-half each of North Carolina and Georgia, all of Florida and as a market was not unknown in Tennessee and Alabama. The advantage of geographic position established, foreign connections, experienced and thoroughly trained merchants, ample capital, and an unquestioned reputation for fair dealing, attracted dealers from all parts of the Southern States, and made the Hardware business one of the most important and lucrative of many that engaged the attention of the commercial element of the city. By far the greater portion of goods then sold were of foreign manufacture, and the names of European makers were as familiar then to the trade as the most celebrated manufacturers in America are now.

From causes too well known to be mentioned now, a complete and radical change took place, not only in Hardware but in all branches of business, and the ancient city realized the complete isolation that had occurred, cutting her off from the largest portion of her commercial territory, and that she no longer controlled the trade that had aided so much in establishing her commercial importance, and added so materially to her wealth.

Merchants now had to be content with what trade could be obtained in the State alone, and were unsuccessful in getting even one-half of that. This loss was so serious that numbers of merchants discontinued business, and their places remain unfilled. Those who decided to remain worked alike with energy and faith to retain the rapidly diminishing trade, but did not entertain the then chimerical hope of seeking the old or any new territory outside of the limits of the States.

The change of markets was, however, not as great as the difference in the class of goods offered. Americans not only copied but vastly improved on almost every article offered, and a preference for the new over the old was quickly given, and foreign goods, save in a few lines, were seldom seen. In the manufacture of Hardware alone, if no other examples were taken, the genius of the American is prominent, and we can readily pardon the inferiority of many productions, and accept for durability, beauty of design and artistic finish. For years the trade was hardly more than a struggle, but as all things come to those who wait, opportunities were given to solicit trade beyond the State lines, and were quickly taken. Representatives, with well assorted sample cases, were sent "abroad," and were successful from the start, and have secured permanent customers that look to this city for a large proportion of what they need in this line.

It required courage, buoyant spirits and unconquerable confidence in the future to conduct a Hardware business for some years past, and while the expectation of profits was a feeble hope the escape of loss was cause for congratulation.

So much for the past. The present is cheering and the future full of hope. The long expected and oft deferred hope of a steady and a rising market has come at last, and with the assurance of no sudden change has been hailed as a summons to gather all energy and expend it in putting Charleston where she properly belongs—the front rank of South Atlantic cities, and a Hardware market inferior to none. Up to present writing these efforts have been successful, and the volume of business done far in excess of years formerly regarded as reasonably good.

How long the benefit of present improved conditions will be enjoyed by jobbers is a question that cannot now be answered, and if suggested quickly dismissed as being too uncertain to be discussed. Judicious action on the part of manufacturers will prolong the pleasant present, but ill-advised advances, and unusual effort to increase production, will be regarded with disfavor alike by jobbers and consumers, and invite outsiders to come in even if for a short time, and endeavor to have a share of the seeming large profits. Such a course will soon destroy the present satisfactory conditions, and result in disastrous declines as the depressed condition of all branches of trade for several years found few prepared, and the strongest suffered the most; now may not the present, with increasing demand and enhanced values, be fully as disastrous, and wreck many who survived the slow depletion of the years gone by?

We will not anticipate trouble, however, but accept the present with grateful appreciation, and having, long ere the present advances were made, placed orders alike for present and future wants, hold ourselves in readiness to supply the

Digitized by Google

wants of all our customers, and look forward to a large and reasonably profitable business for the year to come.

MARSHALL, WESCOAT & CO.

THE BOSTON TRADE.

That the month of September was not up to expectations is conceded by the trade generally throughout New England, but when we consider the handsome gains made during the months of July and August, and the freedom shown in making purchases at that time, the reason is easily accounted for. The stock in the hands of the retail trade has been in such condition as to easily meet the demands of the consumer, and we must look for increased consumption before large orders are placed.

October has started with an improvement in bright, crisp weather, and with such seasonable conditions we hope to mark an improvement over the month just closed.

There seems to linger in the minds of many, a certain amount of suspicion as regards the recent advances, and the size of orders indicates that customers are buying only in such quantities as their immediate demands require. Were the conditions of trade such as to justify further advances, there is no doubt but that the manufacturers would take advantage of the fact and withdraw some of the present ruling quotations, but until there is a greater demand among the consumers most manufacturers will hesitate before making any advance beyond that which is legitimate.

Collections are not what they should be at this season.

FRYE, PHIPPS & CO.

THE PHILADELPHIA TRADE.

October opens with a rather better feeling, and to-day we are enjoying a rain which is more than welcome, as the country is literally burnt up by the drought. The losses in the agricultural section were severe and often very heavy, and since the first of July there has apparently been no rain whatever, and the crops have suffered greatly in consequence, while the agricultural products are lower in price than for many years.

While this may be the case in the agricultural district the outlook elsewhere is much better. Coal is bringing a better price, and reports from the coal section show a good business. Iron and coke are maintained at high prices and business is brighter there. Cotton holds its high figure, and orders from the South are noticeably larger and more satisfactory in consequence.

Hardware prices throughout are well maintained, and higher prices are promised in many lines. As we have repeatedly said, outside of a dozen items the advances in Hardware have been more moderate and conservative, and further advances are almost imperative. The advances in the last few days have been on Cast Steel Bits, Cast Butts, Bright Wire Goods, Vises, Sad Irons and many other small goods, showing that Hardware is now being affected by the advances in price of material.

Collections are still slow, but the immense increase in the money paid out weekly for wages is bound to affect this before long, and a fair volume of business may be expected for the balance of the year, and possibly a larger business in the spring.

BIDDLE HARDWARE CO.

THE BALTIMORE TRADE.

It is pleasant to report a continuance of the same steady demand that has characterized the business of the past month. Higher prices seem to act as an incentive, and orders are being placed freely for late fall goods. In view of the coming elections, some slight decrease in sales may be expected, but the interruption will be but temporary. Campaign oratory has never been recognized as a business tonic.

Prices rule higher, and the recent advances bear every evidence of being made from legitimate causes. Trace Chains for example! Did you ever weigh a pair of Trace Chains, figure the cost of the raw material, adding a nominal sum for workman's wages and see what was left the manufacturer for his profit? Very little—to say nothing of the interest due him on capital invested. Such an advance is legitimate and welcome accordingly. On the other hand, note the advances made by the Bolt makers since February 14th, 1895, hardly eight months ago. The price of Common Carriage Bolts has advanced 40 per cent. It is true the raw material has advanced about the same per centage—*but the raw material only forms about one-third of the cost*, the other two-thirds being made up of wages, interest on plant, etc. Had the Bolt makers advanced wages 40 per cent. then, in that case, we might understand the justice of such high prices; but pools are full of mystery, some deep and some shallow—all muddy. The substitution of machine methods for individual effort is something always to be deplored.

TABB & JENKINS HARDWARE CO.

THE BUFFALO TRADE.

Since our last letter there is no material change in the market. New advances have been made, and these have been slight. The advances in Raw Material would justify all changes that have taken place, and from the present outlook we do not apprehend much variation in the near future. There appears to be more conservatism on the part of all than has been manifest in some little time.

We are glad to see this condition, as we believe this policy the wisest to pursue. Caution at this time is especially desirable, that there may be no fear of reaction.

We are glad to report, however, that there seems to be a demand for better goods. This is particularly interesting, for the reason that the market has been flooded so long with cheap goods that the trade have become quiite dissatisfied, and the dealer who now enjoys the benefits of this change has reason to congratulate himself, as his customers will be decidedly better pleased with their purchases and will make desirable patrons in the future. WEED & CO.

THE VARNISH AND COACH COLOR TRADE.

There has been considerable activity of late in the Varnish and Coach Color markets. The prospect for the fall season seems to be very encouraging, and at no time since the panic of 1893 has there been so generally a feeling of confidence and hope for the near future.

In the matter of orders and new business, the improvement is very decided already, and we think there is little doubt of its continuance for some weeks.

In the matter of collections there is, if anything, a still greater improvement which has extended over several weeks in the past. At no time, for many months, if not years, have collections been so easy and prompt. Certainly we have every reason to feel encouraged in our lines of business.

No. 45 Broadway, New York. EDWARD SMITH & CO.

THE GRAPHITE TRADE.

All our catalogues announce us the "oldest house in the Graphite trade." This means nearly seventy years' manipulation of this precious product, which has forced its way into the manufactures, arts, sciences and sports of the world, from the giant metal industries to the lubricating of bicycle chains, and pot-leading of yacht bottoms in international contests. With Graphite prepared for special work at $7 per pound and in all the range of prices down to a few cents per pound, we can to-day study the pulsation of business in the statistics of our order books. Just now the pulsation is that of great activity and encouraging strength.

September ends with marked increase of sales in all the products, Crucible sales being the largest in any September in the history of this company. Lubricating Graphite comes next, with noticeable orders from railroads, for use

Digitized by Google

on engines, for pistons, cylinders, valve seats of air brakes, etc.

Pencil orders are simply overwhelming, and are now being taken for January delivery. Graphite Paint orders are steady, with substantial sales in the aggregate of about twenty-five per cent. over September, 1894.

One noticeable feature of the healthfulness of the times, and peculiarity of the Graphite business, is the number of applications received for peculiar devices. So many persons seem to be in pursuit of chemical, metallic, electrical, or mechanical combinations, and so many naturally base success upon the special properties of Graphite.

To sum up, we firmly believe that this fall and winter will be characterized by good business and larger individual orders from the trade. Joseph Dixon Crucible Co.

The Penn Hardware Co., Reading, Pa., will erect an additional foundry on their property at the foot of Spruce Street, which will give employment to thirty additional moulders and about fifty additional finishers. The dimensions will be 70x140 feet.

The Jos. Dixon Crucible Co., Jersey City, N. J., in their calendar card for October, show a handsome chrysanthemum, with this quotation from Bishop Coxe: "Flowers are words which even a babe may understand."

Situation Wanted.

POSITION wanted in store or manufacturing concern, city or country; twelve years' experience in Hardware; capable of managing or buying, or as salesman; or of taking charge of correspondence and office work. Best of references. Address W. H. B., P. O. Box 2718, New York City.

Side Line Wanted

GOOD selling specialties wanted to handle in western New England. F. E. Wheeler, No. 476 Main Street, Springfield, Mass.

E. BISSELL SON & CO.,

BICYCLE TRADE RECORD.

Bicycle manufacturers and dealers, the country over, are requested to contribute to this page. News of new stores, changes, improvements, etc., will be gladly received, and promptly published.

New Companies, Stores, Etc.

Beaver Falls, Pa.—The Morado Bicycle Co. has been incorporated with a capital stock of $25,000.

Belvidere, Ill.—Big Thunder Mfg. Co. has been incorporated with A. S. Coxe, president; T. L. Manley, vice-president, and H. J. Coxe, secretary, to manufacture the Coxe Keyless Bicycle Lock and other bicycle sundries. Capital stock, $2,500.

Bowling Green, Ky.—Kellogg & Co., Hardware, bicycles, etc., have opened new store.

Bridgeport, Conn.—Premier Cycle Co., has been incorporated by Llewellyn H. Johnson, Henry C. Douglass, William F. Case and Clifford S. Rutan, of Newark, N. J., to manufacture bicycles, tricycles, etc. Capital stock $55,000. The sum of $20,945.77 has been paid in cash, and $28,861.73 in property, consisting of bicycles, tricycles, machinery, tools and other equipments.

Camden, N. J.—The Columbia Tube Co. has been incorporated by Edward E. Coleman, Charles D. Cramp and W. J. Haines, all of Philadelphia. Capital stock, $10,000 of which $1000 has been paid in.

Chicago, Ill.—Eldorado Cycle Co. has been incorporated by Benjamin F. Norris, William McAlister and Thomas E. Fraher to manufacture and deal in bicycles. Capital stock, $50,000.

Cleveland, Ohio.—The Gemini Cycle Co. has been incorporated by Halbert J. Burdick, John C. Kortz, Clyde C. Burdick, J. O. Mansfield and H. B. Chapman, to manufacture and deal in bicycles. Capital stock, $25,000,

Columbus, Ind.—The Williams Mfg. Co. has been incorporated with a capital stock of $25,000 to manufacture and deal in bicycles.

Defiance, Ohio.—The Defiance Bicycle Co., has been incorporated by Wilmer T. Clark, O. D. Severidge, H. P. Miller, John Spangle, D. F. Southworth, A. H. Wood, John W. Childs, D. F. Enos, S. J. Wheeler, and Wm. J. Wheeler. Capital stock $50,000.

Dolgeville, N. Y.—Karl Fink, and others, are reported organizing a company, to manufacture bicycles.

Elgin, Ill.—The Elgin Sewing Machine & Bicycle Co. has been incorporated with a capital stock of $200,000. This enterprise succeeds the Diamond Sewing Machine Mfg. Co.

Elmwood Place, Ohio.—The Anderson & Harris Carriage Co. will go into the manufacture of bicycles, and contemplate turning out between 10,000 and 15,000 bicycles during the next season.

Grand Rapids, Mich.—Berkey & Gay, furniture manufacturers, announce their intention of adding the manufacture of bicycles, and are preparing to put in machinery for this purpose.

Grand Rapids, Mich.—Grand Rapids Bicycle Co. incorporated by Willis J. Perkins, C. W. George, Eberhardt, Joseph W. Brown and others. Capital stock, $10,000.

Jacksonville, Fla.—Kingsley McCullam has opened a bicycle exchange at No. 319 Main Street.

Kittery, Me.—The Achorn & Dearborn Mfg. Co. has been organized to manufacture and deal in bicycles, etc. Capital stock, $100,000.

Little Falls, N. Y.—Snyder & Fisher are preparing to erect a new factory building for the manufacture of bicycles.

Lockport, N. Y.—Charles Whitcomb and other capitalists have erected a building on Locust Street, and will put in a large plant, this autumn, for a bicycle factory.

Minneapolis, Minn.—The Bicycle Keyless Lock Co., has been incorporated by J. A. Folsom, W. A. Chowan and Chas. L. Wright. Capital stock $25,000.

Nashville, Tenn.—Steps are being taken looking to the establishment of a bicycle factory.

Newburg, N. Y.—George Meyer is organizing a company to commence the manufacture of bicycles.

Newburgh, N. Y.—The Newburgh Cycle Co. has been incorporated by A. M. and George Meyer of Newburgh, and others of New York City and Hartford, Conn. Capital stock, $100,000. This is the same company that was reported as being organized by George Meyer a few weeks ago.

New Haven, Conn.—The Southington Cutlery Co. will take up the manufacture of bicycle parts, and the establishment of this enterprise may be followed by the location of a bicycle factory.

New Orleans, La.—The Southern Cycle Co., Limited, incorporated by Robert W. Abbott, E. M. Graham, Charles E. Fenner and others, to establish a factory for manufacturing bicycles. Capital stock, $50,000.

Northampton, Mass.—C. L. Houghton, W. I. Fox of Whately, and John Woodruff, of Westfield, are organizing a company to manufacture an improved bicycle, the invention of Mr. Houghton. The wheel has a double tube frame, parabolic in shape, and the advantages claimed are that it is stronger and lighter than the diamond shaped frame. The only grazed joint where any weight comes is where the frame is joined to the head. A clamp to which the horizontal saddle post is fastened is joined to the upper part of the curved frame and is adjustable.

Omaha, Neb.—Steps are being taken looking to the organization of two separate companies for the manufacture of bicycles.

Paterson, N. J.—The Webster Mfg. Co. has been incorporated by Alexander L. Kinkead, Paterson, N. J.; William W. Fitzhugh and Josiah L. Webster, New York City, to manufacture and deal in bicycles, etc. Capital stock, $10,000.

Peru, Ind.—The Shirk Mfg. Co., of Chicago, is preparing to locate a bicycle factory in this place.

Sherburne, Minn.—D. Thomas, Hardware, bicycles, etc., is opening new store.

St. Louis, Mo.—The A. F. Shapleigh Hardware Co. appointed St. Louis agents for new wooden bicycle saddle manufactured by the Brown Saddle Co. of Denver, Col.

Stowe, Vt.—H. E. Shaw, Hardware, bicycles, etc., has commenced business. Propositions from manufacturers of bicycles and bicycle sundries solicited.

Waterville, Me.—J. J. Lane and others are organizing a company to manufacture a bicycle lantern, patented February 5 last. Mr. Lane is now in New York City interesting capitalists in the new company.

Zanesville, Ohio.—The Zanesville Cycle Co. has been incorporated with a capital stock of $5,000.

Changes and Removals.

Centreville, S. D.—Ely & Higenbotham, Hardware, bicycles, etc., partnership dissolved, M. Higenbotham continuing the business. Propositions received from manufacturers of bicycle sundries.

Hartford, Conn.—The American Cycle Co., Wheeler & Beach, proprietors, dissolution of co-partnership reported, E. L. Wheeler succeeding to the business, and the same will be continued under his name.

Indianapolis, Ind.—E. Aker, bicycles, reported to have gone out of business.

Lyndhurst, N. J.—McKee & Harrington, bicycle manufacturers, have moved their plant to New York City, and are now located at Nos. 173 to 179 Grand Street.

Ontario, Cal.—Philo Jones, bicycles, reported sold out to Williams Bros. & Co.

Pawtucket, R. I.—Cokely, Monroe & Co., bicycles, reported succeeded by Monroe & Williams.

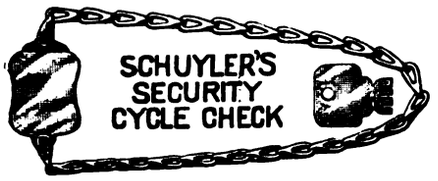
Waco, Texas.—Woodworth & Mann, bicycles, reported to have been succeeded by A. O. Woodworth.

New Goods and Improvements.

Canton, Ohio.—Dueber Bicycle Works, excavations have been commenced on new factory, the building for which will be 100x30 feet. If the success of the business is assured, the company will immediately erect more commodious buildings.

Kenosha, Wis.—The Stirling Cycle Co. is making preparations to increase its facilities for working a double turn, and have placed a contract for the installation of a complete lighting plant, including 600 incandescent and 25 arc lights.

Reading, Pa.—The Relay Mfg. Co. is building a new bicycle factory which will be four times the size of the present one, and will be equipped with special new machinery. They intend using a visible ball-bearing in their 1896 wheel, and will continue to use the patented rear adjusting fork which they have been using during the past two seasons.



Saginaw, Mich.—The M. L. Marr Cycle Co. which was recently reorganized, is preparing to add to its capacity by the erection of an additional factory building two stories high, 36x61 feet, and will equip it with special new machinery.

San Francisco, Cal.—Charles E. Broad, bicycles, contemplates enlarging his present quarters, and will establish a riding academy under the management of F. S. Jacks.

SCHUYLER'S SECURITY CYCLE CHECK.

Handsomely nickeled, light and strong, the traveler's safeguard, a popular lock at a popular price. For simplicity, convenience and neatness of design, the "SECURITY" has no equal. Can be carried in the vest pocket. Key fastens in lock when not in use. Once used by the traveler it becomes indispensable. and is used by bicyclists the world over, When you want to go into the smoker, get off the train for lunch, talk to a friend on the platform, in the waiting-room, at the depot, at the theatre, lock your overcoat, satchel and umbrella to the arm of the seat. It not only secures your packages, but reserves your seat. Each lock packed in a neat paper box—one dozen in a carton. Sample by mail for 50 cents. If your Jobber does not handle our goods, write direct to us; remember we pay the freight.

FOR SALE!

A LARGE MANUFACTURING PLANT.

Lately used as a Bicycle works. Large part of shafting and pulleys already in position, so that machinery could be attached and operations begun at once. Capacity, 15,000 Wheels per annum. This property, with water-power, is well adapted to many kinds of manufacturing purposes, and will be sold cheap. For further information, address

JAS. DICKSON, 98 4th Ave, Pittsburgh, Pa.

The Leidecker Tool Co., Marietta, Ohio, are making some important improvements in increasing their capacity for work. The largest hammer that was ever brought to that city was purchased by them a short time ago. The hammer, together with the machinery belonging to it, weighs 41,150 pounds, while the hammer has a dropping power of 2500 pounds. A large blower was received, and has the capacity for running fourteen fires, while the others heretofore used were only capable of running nine.

"Service" is the title of a little illustrated leaflet sent out by the Troy Nickel Works, Troy, N. Y. It is illustrated in a unique manner, and a very attractive presentation of the Troy Damper, made by this company.

The Springfield (Mo.) Stove Works have closed down indefinitely on account of the rise in the price of iron. One hundred men are thrown out of work. Work may not be resumed for several months.

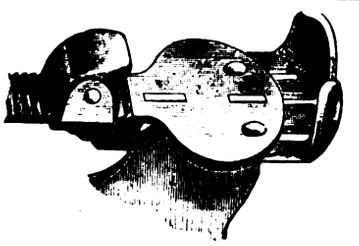
PECK & SNYDER'S NEW AMERICAN CLUB SKATE.



Peck & Snyder's NEW AMERICAN CLUB SKATE for 1895 has revolutionized the art of skate making. New American Club represents an entirely new heel clamp that will fit any heel instantaneously. The old method of clamping to the heel is entirely done away with. It cannot slip, is stronger, acts instantaneously, no screwing or adjusting necessary, saves time, and is without question the most perfect heel clamp ever invented.

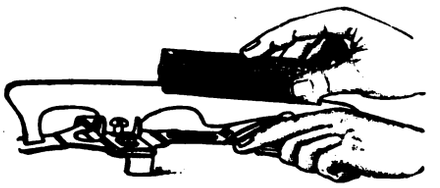
MADE IN FIVE GRADES.

Peck & Snyder's New American Club Skate is the most perfect skate ever constructed. It has simplicity of adjustment, solid foot plates, solid heel clamps, and will fit any heel.

The Clasps Cannot Slip. Sure Grip. Thumb Screws and Sets entirely disregarded. It is Light, Handsome, and Twice as Strong as the old club skate.

HERE'S THE NEW CLAMP.

Ask your jobber to show you samples of the **"New American Club."** If he doesn't carry them, send direct to us for samples and prices. Handsomely illustrated catalogue of this skate mailed on application. Address



A. G. SPALDING & BROS.,

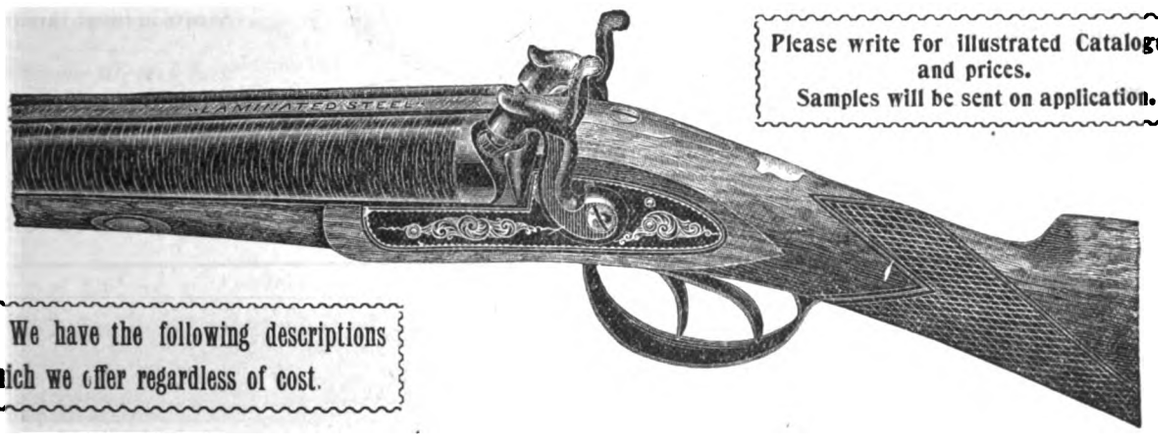
BEST AND CHEAPEST

STONE WATER FILTER

ON THE MARKET.

Tripoli Stone Block System.

Set up ready for use. There are two crocks, each of four gallons capacity—an upper one holding the Filter Block, and the lower one, which can be used as a water cooler if desired. This Block is four inches in diameter by the same in height, and is hollowed out on inside. This fits on a metal tube, which fastens by means of a nut to bottom of Filter Jar. Block can be lifted off tube, cleaned and replaced in two minutes, and with no trouble at all. Water passes from outside of block, through the walls, into the hollow chamber, and from thence, by the means of the Drip Tube, into the lower receptacle.



The Finest Piece of Salt Glazed Stoneware Ever Offered the Public.

ONE REASON WHY

Our business has grown out of all proportion to any other manufacturer of

CUTLERY IN THE U. S.

Is that while our goods are unsurpassed in finish and general appearance our special aim has been to adapt them to the purpose for which they are to be used.

In the matter of Carvers, your customer wants a Knife to cut with as well as to look at. All our Carver blades are made from carefully tested Butcher Knife Steel. They take and hold a fine cutting edge.

We also make Table Knives, Butcher Knives, Shoe Knives in great variety. All fully Warranted.

Just What Every Manufacturer Wants!

The Reference Book

OF THE

Hardware and Kindred Trades of the United States and Canada.

THE Book contains, in the most condensed and convenient form possible, the Names and Ratings of all firms in the following Trades in the United States and Canada:

Hardware Dealers.
Dealers in Sporting Goods, Bicycles, Firearms, &c.
Agricultural Implement Dealers.
Stove Dealers.

Sent (Postpaid) on Receipt of

TWO DOLLARS.

CERTAIN marks are printed after each name, showing the line or lines of goods handled.

The work is complete, condensed and convenient, and will be found especially desirable in sending circulars, on account of the street numbers. The ratings enable the user to select names of any specified rating or over that may be desired.

In cities the lists are classified—Hardware dealers all in one condensed list, Stove dealers in another, etc. In most cases, in the Hardware list, are specified the special kind of Hardware handled, as Shelf Hardware, Cutlery, etc.

TO purchase a retail Hardware store with a moderate sized stock, having a good location in a live, growing town. Must have a good trade, and doing a good business. Address JOHN R. SWARTZ, Hughesville, Pa.

Agencies for Hardware Specialties Wanted.

AN old-established firm of advertising agents and contractors in the city of London, England, doing business with the leading advertisers of the United Kingdom, are open to accept sole agencies for the United Kingdom for embossed steel or enamelled iron goods, which are suitable for large advertisers, or any novelty in the advertising line for inside or outdoor exhibition. Apply by letter to C. A. H., Room 25, Times Building, New York.

EXPERIENCED cutlery and Hardware salesman, about to locate in San Francisco, wishes to correspond with manufacturers in those lines, with view to representing them on the Pacific Slope. Address Rhoads, care HARDWARE, No. 143 Chambers Street, New York.

Export Agency Wanted.

GENTLEMAN of wide experience and undoubted integrity will shortly remove to Germany, and desires to represent American manufacturers abroad. Propositions may be addressed to "Export," care W. H. H. Hull & Co., Tribune Building, New York.

Business Opportunity.

WANTED—An active, energetic young man who can command from $5000 to $8000 capital to enter into a co-partnership with an old established company. He will be wanted to take care of the finances of the company, and attend to the office business. This is an unequaled chance, and to the right man will present an opportunity that will be very valuable. Address XX, care HARDWARE, No. 143 Chambers Street, New York City.

Patent for Sale.

FOR SALE: One-half or whole of United States and Canada patents, recently allowed on the only Adjustable Ratchet Monkey Wrench now made. Demand great. A big winner. Address Owner, No. 231 S. Lincoln Street, Chicago, Ill.

For Sale.

FOR SALE—In one of the best manufacturing towns in Ohio, a stock of Shelf and Builders Hardware, Paints, Oils, and Agricultural Implements; stock will invoice $17,000 to $19,000; clean and in good shape. Store does a business of $40,000 per annum. Apply to T. B. Rayl Co., Detroit, Mich.

FOR SALE in Philadelphia, Pa., the Lease, Goodwill and Fixtures of the old established House Furnishing and 5 and 10 cent store at No. 127 North Eighth Street. This is cream of location; and if you are looking for such a store this is one of the few opportunities. Address E. Frey, No. 127 North Eighth Street, Philadelphia, Pa.

A FOUR-HORSE Power Gas Engine, in good running order; now in use by us at our stores. Edward Darby & Sons, 233 Arch Street, Philadelphia, Pa.

For Sale or Rent.

A NEW, large manufacturing plant, hitherto used in manufacturing reapers and mowers, but well adapted to other uses; thoroughly equipped wtth machinery, tools and appliances of best modern make, all ready to steam up and run; at St. Louis Park, just outside of Minneapolis, Minn., with street car connections; the property being situated alongside of the Minneapolis & St. Louis, and Chicago, Milwaukee & St. Paul railroads with switch connections. For particulars address Geo. C. Squires, St. Paul, Minn.; C. F. Forster, 638 Rookery, Chicago, Ill., or John Little, Xenia, Ohio.

To Rent.

TO rent at New Rochelle, N. Y., a store in the best business part of town. A good opportunity for a live man. Addrees H. E. Colwell, agent; or E. Lambden, Jr., owner.

Attention! Hardware Travelers!

HARDWARE and other traveling salesmen who wish to increase their incomes, will be placed in a position to do so by sending their name and address to the HARDWARE Publishing Co., No. 143 Chambers Street New York.

J. C. McCARTY & CO.,
JOHN H. GRAHAM & CO. } New York Agents.

WE PAY THE FREIGHT.

Instead of trying to crowd our goods upon an unwilling market the past two years, we have been working for better processes—to make **better goods for less money,** and now "we have got there with both feet." Our **pails are larger** than other makes, yet **cost no more.** Made of **strong fiber, wound,** and **steel bound,** they don't split open, nor chip off at edges. They have a **chime** you can **catch on** to, and a truss bottom that don't warp, loosen or leak.

All "Standard" Pails, Slop Jars, Spittoons, Wash Basins, etc., are **water-proofed** and **indurated throughout** by our newly applied process, and are **absolutely unsoakable.**

An **Ebony enamel,** hard and smooth, gives "Standard" ware an **attractive** appearance, and a **durable** finish. **Scores of families** in every county will use it largely if it can be got "at the store." **Do you want their trade?** Lots of 100 lbs. or more, delivered f. o. b. cars, at their depot, to all responsible dealers.

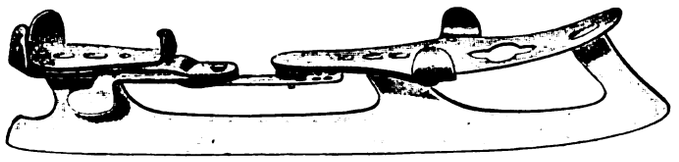
are undoubtedly the best. They retain their handsome finish and the heads never come off. They will match any interior finish, as they are made in all woods used for that purpose. The

BARDSLEY CHECKING HINGE

closes the door with a soft, gentle action. Catalogue on application.



J. BARDSLEY,

149 Baxter St., NEW YORK.

A Mistaken Notion.

It is a mistaken notion that a fine store in an eligible location, surrounded by attractive signs, is a superior advertisement; for the experience of the most enterprising merchants is that it pays better to spend less in rent and more on advertising.

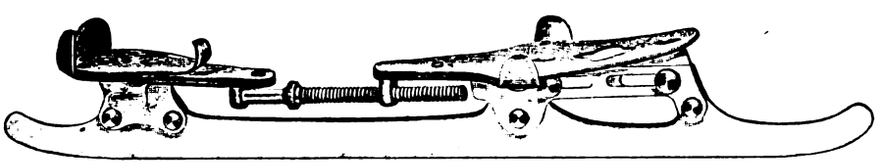
Worcester, Mass., October 1st, 1895.



TO ICE SKATE BUYERS:

We have a great success in our new adjustment for Ice Skates. Jobbers and retailers have recognized the merit of our goods, and our sales have been very large.

Traveling representatives of a competing ice skate manufacturer have recently been guilty of a systematic effort to sell their ice skates by willfully misrepresenting our new adjustment. So great has been their distress that they have tampered with our patent adjustment in such a way as to impair the working of the skate. Under these conditions they have shown our goods for the purpose of selling their own.

We have a well tried and carefully constructed ice skate adjustment, which marks an advance in skate making, and we guarantee our stock.

44 Cliff Street, NEW YORK.
148 Lake Street, CHICAGO.
Factories: GEORGETOWN, CONN. CHICAGO, ILL.
ESTABLISHED 1818.

THE OLDEST AND LEADING MANUFACTURERS OF GALVANIZED WIRE GOODS IN AMERICA.

"Pennsylvania" Fruit Picker

This Cut almost speaks for itself—the device being so much like the human hand, shows at once the utility of the article.

PATENTED.

AS A FRUIT PICKER IT HAS NO SUPERIOR.

It is made of Heavy Galvanized Wire, and Easily Adjusted to a Pole. It has been sold for several years, and the demand (as it is becoming known) is steadily increasing. The difficulty of detaching fruit and securing it unbruised is apparent to everyone so engaged. This overcomes the difficulty, and saves the finest fruit which commands the highest prices.

THE LOW PRICE AT WHICH IT IS SOLD

Brings it within the reach of those who have but little fruit to gather as well as those who have large quantities. **Price, per doz., $6.00. Liberal discount to dealers.** It will gather Apples, Peaches, Pears, &c.

—MANUFACTURED BY—

Pennsylvania Wire Works,
EDWARD DARBY & SONS,

233 & 235 ARCH STREET, PHILADELPHIA, PA.

IMPROVED
Labor-Saving
CARPENTERS' TOOLS.

STANLEY

MAGNOLIA METAL
IN USE BY
EIGHT LEADING
GOVERNMENTS.

Magnolia Metal Co.,
OWNERS AND SOLE
MANUFACTURERS,
74 Cortlandt Street,
New York.

London Office: 75 Queen Victoria St.
Chicago Office: Traders Building.

CORNELL UNIVERSITY.
ITHACA, N. Y., August 10, 1895.

To whom it may concern: I would respectfully state that I have used Magnolia Metal with satisfaction for bearings where other metals have given a great deal of trouble. I have employed the metal in crank-pin boxes on the Experimental Engine at Sibley College, and in the bearings of water wheels which were under considerable pressure.

We have made some tests to determine accurately the friction reducing qualities and durability of this metal. On account of an accident to our machine these tests are not all completed, and a full report cannot be given at the present time.

Sufficient has been done, however, to indicate the superior quality in every respect. I may say that I fully believe the metal has most excellent quality in every respect for the purposes and uses claimed. I am sir, truly yours, R. C. CARPENTER.

(Professor of Experimental Engineering, Sibley College, Cornell University, Member Society Mechanical Engineers, &c., &c., &c.)

ORANGE SPORTING POWDER, MANUFACTURED BY LAFLIN & RAND POWDER CO.

ORANGE RIFLE EXTRA, ORANGE SPECIAL, ORANGE DUCKING, ORANGE LIGHTNING.

The attention of TRAP AND FIELD SHOOTERS, RIFLEMEN AND DEALERS IN GUNPOWDER, is called to the new ORANGE SPORTING POWDER, patented April 17th, 1888, and branded **ORANGE RIFLE EXTRA.**

This Powder is quick and strong, and burns with such perfect combustion that the only residum left in the barrel after shooting is a dark oily substance easily removed While this Powder is not exactly SMOKELESS, it gives only a light bluish smoke, which is almost instantly dissipated, and interferes but little with the shooting of the second barrel, taking the place of the so called smokeless powders in this respect.

This brand of powder sells at the same price as any other brand of Rifle Powder and is superior to any made. No person who shoots can afford not to give it a trial, as after once trying it he will never use any other Powder when he can obtain the ORANGE EXTRA. Weight and quality guaranteed

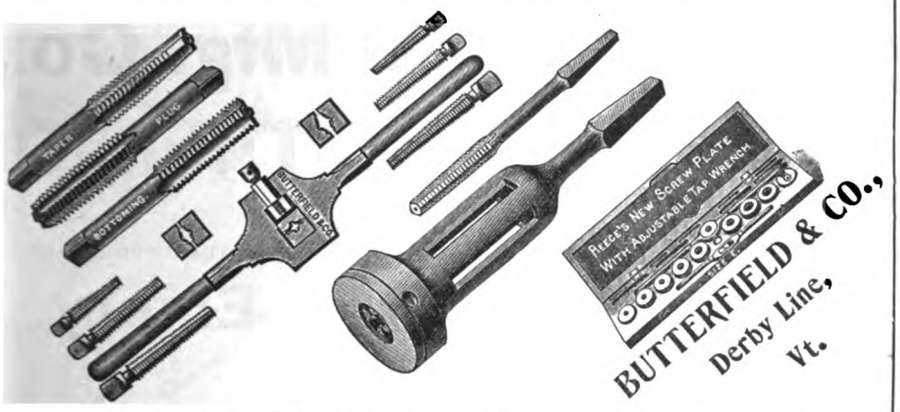
The PUTNAM Hot-Forged and Hammer-Pointed Horse NAILS

Are made in Sizes and Styles as below:

TURF NAILS, Nos. 1 to 5.
FRENCH HEADS, for punched shoes without creases, Nos. 3 to 7.
REGULAR HEADS, Nos. 5 to 14.
CITY HEADS, for shallow creased shoes, Nos. 5 to 9.
COUNTER HEADS, or FROST NAILS, Nos. 5 to 9.

Prices of these styles are the same as for Regular Heads of the same size.



The **only** Horseshoe nails in the world made precisely the same as the old-fashioned, hand process, being exclusively **Hot Forged and Hammer-Pointed.** This **hammering** (not pressing, rolling or shearing) while the metal is at welding heat blends all the particles into a compact, firm nail that outwears all others and will **Never Split, Sliver or Break.** *They are not sheared but have smooth edges clear to the point.*

The attempts of other manufacturers, in their advertising, to identify their product with the Putnam Nail leads us to state that the PUTNAM NAIL is made SOLELY by us in the ONLY RATIONAL WAY a GOOD horsenail can be produced.

Nickel-plated Mascot Ring for 10 Cents in Stamps or Silver.

The AMERICAN WICK is made on scientific principles. The gum inherent in the natural cotton is taken out, and no expense is spared to produce a wick that will give THE GREATEST ILLUMINATION.

THE
AMERICAN WICK
Made by the
WICK DEPARTMENT
Of the STANDARD OIL CO. of NEW YORK.

Oil drawn up through the AMERICAN WICK burns with a large, clear, white light and the flame does not drop off in size as it does when a poor wick is used. When the cotton is clogged with its natural dust and gum the full illuminating power of the oil is not obtained and the complaint is heard that the light DROPS.

THE ORIGINAL IS THE BEST.
ROYAL CENTRAL DRAFT LAMP.

This Lamp has no Superior in the known world.

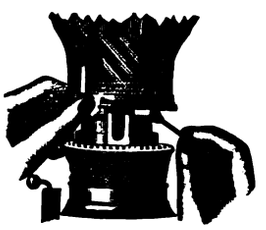
Gives the Largest Light for Wick Exposure of any Lamp made.

ROYAL LAMP.—No. 1013.

Chimney Lift and Wick Raising Device the best and easiest of adjustment. There are many imitations of these improvements, but the **ROYAL** is still the best.

The Royal Chimney. Lift will stay in position while lighting the lamp without support from the hands. This no other lift device will do.

The Wick Raising Device of the Royal Lamp is unquestionably the best, and has the approval of our largest competitors by their practical adoption of it.



The Wick can be adjusted more accurately and more easily than by any other device.

Workmanship, Style and Finish are unsurpassed. Made in all finishes of Stand, Table and Banquet Lamp. No better lamp for the dealer to handle.

The Plume & Atwood M'f'g Co.

29 Murray St., New York 199 Lake St, Chicago, Ill.

The

B & H
LAMPS.

—Easy to Light—

—As Gas.—

For they are made with the PATENT LIFT ATTACHMENT, as shown above, by the use of which the Lamp can be lighted without removing chimney or shade

Lift the Ring that holds the Chimney, apply the match, and let the Ring drop back to place.

—"The B & H"—

Is the only Lamp made with DOUBLE CENTRE DRAUGHT.

This feature produces Perfect Combustion, the result being the Brightest and Best Light. They are made in the Largest variety of styles and Handsomest Finishes

We also Manufacture a Complete line of *Bronze and Brass Art Metal Goods,*

Gas and Electric Light Fixtures, Fenders, Andirons, Fire Sets, Etc.

Table Bells and Tape Measures.

A Business Man in Politics.

Thomas F. Keating has been nominated for the important office of Register of New York. As he is a Democrat upon a Republican-Democratic fusion ticket, and as he is first of all a business man, and received the nomination because he was a business man, we can see no reason why a journal representing the important branch of trade of which he has for so many years been a part, should refrain from speaking of his business standing, and of the qualifications he possesses for a proper administration of this important financial office.

We have always urged business men to take a part in politics and in the holding of public office. Without discussing in any way the merits of the parties which have carried out this idea in the nomination of Mr. Keating, and with no reference whatever to the party or parties by which he shall be opposed, we feel impelled to the declaration that this nomination is one of essential fitness. It certainly is one that reflects credit upon the Hardware trade of the country, to which Mr. Keating has given a faithful service for a quarter of a century and more.

Mr. Keating has shown his ability in the direction of financial management, in his labors as assistant treasurer and city manager of the Yale & Towne Mfg. Co., and as treasurer of the New York Hardware Club. The qualities that have made him successful in these important positions of trust, would be of eminent use in the public service; and those who best know Mr, Keating, are the most certain that he would conduct the office in a business-like manner and in the sole interests of the community.

It is refreshing to hear a business man talk straight to the point, as does Mr. Keating in answer to a question as to his views upon the administration of the Register's office. "If I should be elected Register," says he, "I would conduct the office in the interest of the public precisely along the lines on which I conduct this office in the interest of the company who have made me their manager in this city. I would put the Register's office exactly on the basis upon which this private business stands. I employ men here solely for their competency, and if any of them should turn out to be of bad character, I should regard him as incompetent and discharge him. Before employing an applicant I find out whether he is competent in character as well as in mere mental capacity. Then I exact of each each employee punctilious attendance, a full day's work, and absolute fidelity to the interests of the company; and I endeavor to compensate each according to his value. It is unnecessary to say that there are no superfluous employees here—just so many as the needs of the business absolutely require.

"If you will transfer these ideas and methods to the Register's office, you will understand just how I should propose to conduct it in the event of being elected. Absentees, mental incompetents, moral incompetents, the unfaithful and the superfluous would have to go, and only those would remain or come in whom I should be willing to employ in my private business, and only so many as the work of the office really necessitated.

"I should probably resign my position as manager of the company's office here. I have not as yet felt it necessary to decide that question absolutely; but I can scarcely see how I could retain my position and give to the office of Register the time and attention I think it requires. If it does not require about all the time and attention a man can reasonably be expected to give to his principal occupation, then I should say the city had been overpaying its Registers."

We like talk of that character, when we know that it means more than talk. In this case, the nominee means just what he says, and has the character and executive ability to carry his intentions into action.

A Rush for Wheels.

Elsewhere in this issue we present a further installment of letters from leading bicycle manufacturers of the country, as to the probable output of wheels for 1895 and 1896, and upon other questions of interest to the Hardware and bicycle trade. Some reflections may be found therein that will bear considering. The general tenor of these letters is about the same as those discussed in our last preceding issue, the output of the coming year being estimated anywhere from seven hundred and fifty thousand, to one million. These figures may not look large upon paper, but when we come to reflect upon what they mean, they become

Digitized by Google

of wide and far-reaching importance. Few industries there are that have so mightily developed within a brief period. The American people have taken to the wheel as they have never to anything before; and yet, when one full million, or even two million, ride at once, it leaves sixty-five or more million who yet go afoot or in baby-carriages. This is a mighty army of possible recruits to call upon, and perhaps the manufacturers are not only not yet overdoing the business, but may confront a deficit of wheels at the end of the coming year. When the American people move in any given direction, they go it with a rush.

In Memory of William H. Williams.

At the last regular meeting of the New England Hardware Dealers' Association, held in Boston, October 9th, it was unanimously voted "that a committee be appointed to draft a suitable expression of sorrow and esteem that this Association bears toward the late William H. Williams, of New York, our business associate and President of the New York Hardware Club. That it be placed upon the records and a copy be sent to his family and to the Club of which he was the President."

The committee appointed by President Janvrin, of Boston, was as follows: D. Fletcher Barber, of Boston; John H. Robbins, of Boston; Charles E. Adams, of Lowell.

The following resolution was drawn up by the committee and passed:

We, the members of the New England Hardware Dealers' Association, desire to place upon record our sincere regret at the sad news of the death of Mr. William Hilton Williams, of New York (for many years President of the Hardware Club of New York.)

As an Association we well remember his ready acceptance of our invitation to be present at our meeting of February 14, 1894, his pleasing and eloquent address, and the cordiality with which he, as President of the Hardware Club of New York, invited the members of our Association to partake of its hospitality in the metropolis.

The removal of such a man from our midst is not only a great loss to our own line of business, but will be deeply felt by all who knew him. He was a man faithful to duty in every walk of life to which he was called, and the influence and example of his character will long be remembered.

While we are deeply sensible of the loss we have sustained, we remember with gratitude the many years of faithful service which were granted him. The memory of Mr. Williams will long be faithfully cherished by many to whom he had endeared himself by his manly and amiable characteristics. We commend those to whom this affliction comes as a crushing blow, to Him who inspired the great apostle to write: "And now we see through a glass darkly, but then face to face," knowing that in the great eternal we shall have these seeming mysteries explained.

Resolved, That this resolution be placed upon the records of the Association, and that the secretary be instructed to forward copies to the family of Mr. Williams and to the Hardware Club of New York. Respectfully,

Committee: D. Fletcher Barber,
John H. Robbins,
Charles E. Adams.

Misdirected Energy and Dumb-Waiters.

The Storm Mfg. Co., Newark, N. J., indulge in a little illustrative pleasantry upon a leaflet just issued, as follows: "Colonel Mulberry Sellers used to tell a story about a lot of charitably inclined women who were anxious to do some good among the heathen. Some of the enthusiastic ones hustled around and located a job lot of red flannel underwear, and another a lot of heavy overcoats, which they proceeded to 'buy up' for the benefit of the heathen. So the overcoats and the underwear were packed up and sent to the heathen in Central Africa. Of course the heathen didn't know anything about such things, but for all that they put them right on and began a seven days' promenade, when the intense heat melted the heathen right down, and, so the colonel says: 'All over Africa there are great big heavy ulsters, lined with red flannel underwear, standing up stiff in the sun, with nothing to tell the tale of the heathen but a little grease spot.' The chances are that this story isn't strictly true, but it serves very well to illustrate the uselessness of misdirected energy, and there is more misdirected energy in making Elevators and Dumb-Waiters than anything else we know of. The intention may be all right, but the 'know how' is lacking. We are experts and specialists in elevators and dumb-waiters, and when you want anything in this line, be sure to write us before you decide."

Busy in Baltimore.

Clendenin Brothers, No. 111 South Gay Street, Baltimore, Md., inform a Hardware representative that every one of their departments is not only running full time, but are working four hours overtime three nights per week. They have been thus working since September 1st, and the volume of orders then entered is equally as much to-day, thus showing a favorable demand for their goods. Their departments are being added to all the while, and they have the prospect of this full work until at least the end of January. The goods are not being bought by the trade for any purpose of speculation, but are orders that are actually required.

In their Nail and Tack department where they make Brass and Copper Corrugated Shoe Nails, Cobblers' Nails, Channel Nails, Copper Tacks and Copper Nails, Zinc Tacks and Zinc Nails, and Finishing and Fine Nails, etc., they are now taking up Shoe Tacks. In their Rivet department where they make a full line of Copper Belt Rivets and Burs, they are now taking up Norway Iron Rivets. In their Soldering Copper department, they are now taking up Forged Copper Bars for electrical purposes, and have been very successful in this line.

Two Lucky Coincidences.

As every one knows, Hulbert Bros. & Co. use the White Star as the emblem of their Majestic bicycle. By chance entirely, the first lot of '96 tubing arrived on Saturday last on the White Star liner *Majestic*. While the firm is not inclined to be superstitious, they cannot help but feel that the circumstance is a good omen for their '96 line; both the White Star steamer *Majestic* and their bicycle being built to last and for safe, solid comfort.

Again, the same mail brought them two letters, one from a racing man who had just won a race, complimenting them on the ease of motion possible on their Mesinger saddle. The other letter contained an order for one of the saddles from the man who was beaten. Hulbert Bros. & Co. consider the last letter the better compliment.

Hardware Club.

The following gentlemen have been unanimously elected to the New York Hardware Club since our last report:

Joseph Fettretch, Times Building.
Robert F. Fitz, No. 253 Broadway.
Joseph H. Hoadley, No. 253 Broadway.
Clarence W. Hungerford; W. Ames & Co., Jersey City, N. J.
Samuel F. Randolph; Commonwealth Rubber Co.
Edward P. Reichhelm; American Gas Furnace Co.
Richard Smith, Jr., No. 195 Broadway.

Sargent & Co. have issued a price card of their wood bottom and iron planes. On the reverse side of the card are the list prices with columns left blank for writing in the cost and selling prices if desired. This makes a handy article to hang up in the store for reference.

What Some Words Mean.

EDITOR HARDWARE: Here are some definitions of familiar terms that may interest the trade:

Spike: From spica, an ear of corn, a point, a pike.

Tack: Take various forms in many languages; but all from the same root "stag" or "stak," to thrust, to tackle, attack. The kindred words are take, tackle, tag, etc.

Saw: It cuts with a toothed edge, and comes from the Aryan root, "Sak," to cut; later from the Latin "secare,' to cut; saw, sickle, scythe, from same root.

Brad: A thin long nail; from Anglo-Saxon "brord," a spike, a spire, a blade of grass; and is closely related to "brist," of which bristle is the diminutive.

Razor: A shaver. It razes, cuts down, levels, smooths.

Sledge: A hammer, from "schlagel," a mallet; so a sledge hammer is a hammer-hammer.

Axle: Shoulder.

Whiffletree: From "whiffle," to veer about, as a whiff, or puff of wind; and "tree," which is but another word for timber.

Swingletree: From "swing," a swingle tree, or "swinging timber."

Singletree: Is but a corruption of "swingletree," and from the use of this corrupt form came the name "double-tree," the timber to which the swinging tree is attached.

As to "Paid cash right on the nail," in times long since past there was in the midst of the Limerick, Ireland, Exchange a standard set up, and upon it was a copper disk upon which earnest money for all stock exchange bargains was paid. This upright and copper plate was called the "nail." In Bristol, England, there were four of these "nails" set up in front of the place of exchange. Other places there were, but these will suffice.

Yours respectfully, J. R. NUTTING.

Davenport, Iowa, October 10, 1895.

The World Awheel.

There is an excellent and reliable trade journal called HARDWARE, and it has solicited the opinions of the leading bicycle manufacturers of the country as to the number of bicycles manufactured in America during 1895, and the probable output for 1896. The responses, which are from the leading manufacturers of the country, place the output for 1895 anywhere from 400,000 to 750,000, and that of 1896 from 600,000 to 1,000,000. A fair average of these opinions would bring the prophecy for 1896 to near 750,000 wheels. The general opinion is that prices will remain about the same as they are now.—*Buffalo Commercial.*

The organ of the Hardware trade, HARDWARE, has solicited the opinions of the leading bicycle manufacturers of the country as to the number of bicycles manufactured in America during 1895, and the probable output for 1896. The responses, which are from the leading manufacturers of the country, place the output for 1895 anywhere from 400,000 to 750,000; and that of 1896 from 600,000 to 1,000,000.—*Crawfordsville (Ind.) Journal.*

HARDWARE has solicited the opinions of the leading bicycle manufacturers of the country as to the number of bicycles manufactured in America during 1895, and the probable output for 1896. The responses, which are from the leading manufacturers of the country, place the output for 1895 anywhere from 400,000 to 750,000, and that of 1896 from 600,000 to 1,000,000.

On with the sport,
Let the wheel reign unconfined!
Nor winter's rigors, nor snow, nor wind
Shall check its wild cavort!

And now here comes a man out of the wild and woolly West who says we may ride our wheels all winter if we wish. Yea, not only this, but ride faster than ever, if we will. This is a matter that will cut considerable ice with many devotees of the wheeling during the coming winter months. The bicycle has always heretofore been considered erratic and drunken enough in its movements to more than satisfy most riders, and particularly new beginners; but this man audaciously proposes to give it a skate.—*Cortland (N. Y.) Standard.*

Those who are waiting to get their "wheels" next year will be interested in the statement of HARDWARE that prices will be about the same as this year. Inquiries from manufacturers put the output of bicycles during 1895 anywhere from 400,000 to 750,000, which is a very wide margin. HARDWARE estimates the production next year at 750,000 machines, although some claim the number may go as high as 1,000,000.—*Paterson (N. J.) Guardian.*

HARDWARE has inquired from leading bicycle manufacturers about the number of bicycles made in America this year, and the probable output for next. The former number is set anywhere from 400,000 to 750,000, and the latter from 600,000 to 1,000,000. These figures seem to justify the belief that there are a million persons in America who ride bicycles.—*Meriden (Conn.) Record.*

HARDWARE, a trade journal, estimates the bicycle output of this country for 1895 at about half a million and the output for 1896 at three quarters of a million. At $100 apiece this represents a great deal of money.—*Minneapolis (Minn.) Tribune.*

Some of the leading makers have estimated the output of wheels for this year and what it will be in '96. HARDWARE publishes the letters, and a study of the figures will be interesting. . . . It will be seen that there is a great discrepancy in the figures offered, but, as it must be remembered that it is simply an estimate, the figures given for the '95 business are remarkably consistent. They all seem to agree that the output for '95 will be about 400,000, as two out of the six firms give that number, and estimating that number for this season, and remembering that since that time from ten to twenty new firms have entered the field, each with a capacity of from 2500 to 25,000, together with the fact that in '95 there was hardly a firm that was able to supply the unprecedented demand, then a trebled output over that of '95 will not be too much to expect, which, estimating the '95 output at not less than 400,000, gives us a '96 supply of 1,200,000.—*The Wheelman.*

Elevator Inspection.

HARDWARE calls attention in a recent number to the need of action by the Legislature to insure greater safety on the electric elevators so much in use in the tall buildings of cities. Each elevator in a modern New York "sky-scraper" travels many miles a day. Even when the safety appliances work, after a sudden and unintended descent through several stories, the effect is rather severe on the well being of the passengers. A man may be ever so cool in the presence of such danger, yet the experience is one which may be injurious to him in a physical sense. It is one which no woman should be called upon to undergo. To be sure, there are guarantee companies which regularly inspect the elevators for which they assume responsibility. The law should provide that such inspection should be systematic and general. It will not do to wait until some awful accident draws popular attention to the subject. As the number of these elevators increases there is danger that constructors and those maintaining them will become careless, and the lives of thousands will be more subject than now to deadly perils, if the inspection is neglected.—*Elmira (N. Y.) News.*

The Belding Mfg. Co., of New York, Chicago, and Belding, Mich., have changed their name to the Belding-Hall Mfg. Co. This consolidates the Belding Mfg. Co. and Hall Bros.' Mfg. Co., making a capital stock company of $200,000, with $15,000 surplus.

Jones' Folding Plant Stands.

A very attractive and salable line of goods being manufactured with no small degree of success by M. D. Jones & Co., No. 368 Washington Street, Boston, is shown in the two sample illustrations accompanying this. These are the Jones' Folding Plant Stands, patented October 1, 1895. In

FIG. 1.

Fig. 1 we show the No. 20 Folding Plant Stand, with wire trays; and in Fig. 2 the Two Shelf Wood Plant Stand, folded. These goods are described as most compact, durable and strong, with prices that make them an object to any Hardwareman. In further description the makers say: "They pack closer than any other Plant Stand for shipment. The ends are made of flat steel and have porcelain casters. The steel and wire work is finished in green and bronze. The construction of the shelves or trays is such that there is more room for the pots and foliage than any other Plant Stand that takes up the same amount of room on the floor. Can be opened or folded in a few seconds' time by simply spreading the Plant Stand apart at the bottom and dropping the cross bars into their places.

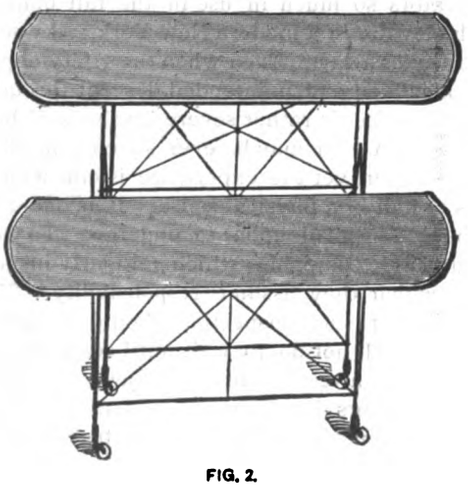

FIG. 2.

Trays are in position and Plant Stand ready for use. To fold it, lift up the cross bars and close the stand together closely and it is folded. The motion of spreading apart the Plant Stand opens the trays to position. The motion of closing it together folds it compactly. Wood shelves are finished imitation of cherry." They also manufacture a patent folding and adjustable Show Window or Bottle Stand that folds in the same manner as the patent Folding Plant Stands, and in addition the shelves can be adjusted to any degree of angle, independently of the folding of the stand; are useful in grocery, drug, liquor stores and other kinds of business; and can be made to order with flat shelves to show Hardware, or any other kinds of goods requiring display. The company will be pleased to send their illustrated descriptions of these goods, or of their lines of wire plant stands, hanging baskets, trellises, flower pot brackets, shelf brackets, iron garden vases, settees, chairs, bouquet holders, wrought iron folding tables for piazzas, etc., etc.

The Iver Johnson Cycle.

EDITOR HARDWARE: After thoroughly looking over the cycle business for this year, we have decided to market the cycles manufactured by us, under our own name and solicit the trade direct as manufacturers.

It is hardly necessary to say that we are one of the oldest cycle manufacturers of this country; we established in 1871 in the manufacture of firearms, and took up cycle building in 1887, when we made the Springfield Roadster, which cycle we continued to build during the days of the old high ordinary. With the advent of Safety Cycles we started to build the Lovell Diamond Cycles; these we have made up to the present time.

The cycle we will build for 1896 will contain all the leading features of the cycles of our 1895 pattern, together with many improvements we have added for 1896. The cycle will be known as the Iver Johnson Cycle, and we solicit patronage for this wheel; as our name as manufacturers of firearms and cycles guarantee, it will bear the stamp "Highest Grade." It will be backed in mechanical construction, material, quality and finish, by our reputation and experience of twenty-five years in the manufacturing, the last nine years spent in wheel construction. This is not a new cycle, but an old established one that has borne our name as manufacturers upon the name plate since 1890; to this we have added 1896 improvements and the new name, Iver Johnson Cycle.

Yours very truly,

IVER JOHNSON'S ARMS & CYCLE WORKS.

Fitchburg, Mass., October 18, 1895.

Cleveland Twist Drill Co.

The Cleveland Twist Drill Co., Cleveland, Ohio, make the following announcement: We take pleasure in announcing to our customers and the trade in general that letters patent have been issued to us on our grip socket, under date of October 15, 1895. We have defended our right to this patent against the most persistent efforts of another party, who set up an interference, claiming priority of invention, and threatening our customers and ourselves with infringement suits. We have received judgments in our favor in every court of appeal, and the final issuing of the patent to us settles the question of our right to manufacture and sell these grip sockets without let or hindrance, and we stand ready, regardless of expense, to defend our rights to the fullest extent of the law.

The Hardware firm of Dinsmore & Potter, Fairfield, Neb., desire to notify the trade that, though in the death of W. W. Dinsmore of the firm a great loss has been sustained, there will be no change in the firm, as Mrs. Dinsmore owns the interest of the deceased.

The monthly meeting and dinner of the New England Iron & Hardware Association took place in Boston, at the Brunswick Hotel, on the evening of October 15th. There were about forty of the members present. The president of the Association, A. M. Wiley, occupied the chair. Rev. A. A. Berle and T. James Fernley, of Philadelphia, were present as guests.

CONFESSIONS OF AN UNSUCCESSFUL CLERK.—X.

In this old Nineteenth district of Ohio, in those days, a nomination upon the Republican ticket meant an election, and accordingly when the crisp October days came around, and the voters had expressed themselves at the polls, Simon House was declared the sheriff-elect.

There may have been men in that county who were happier than my partner just then, and even some larger in their minds, but we of Branch were disposed to doubt it.

The event was one that involved the sympathetic congratulations of the whole town. Even the Democrats who had voted against him were glad that a neighbor had been honored, and it was with the best of feelings that Sam Burns drawled out, from his seat behind the stove, "Darn your hide, Sim, it goes agin the grain to take in a Republican, but I'm glad you got it."

"All right, Sam," was the slow remark. "When you come down to jail for hog stealing, I'll remember that."

We sold more sugar and tobacco during the next week than in a month before, and the flow of butter and eggs upon us was steady and copious. "It pays, Hank, it pays," said Simon each night, as we figured up our receipts. "There's nothing in the world that succeeds like getting thar. It's coming our way. But don't let us lose our heads. Business, my boy, and politics afterwards."

How much better it would have been for Simon and myself had we stuck to that.

Of course we had a serenade. The hint was given me to have the great-elect at home on a certain night, and I had no trouble in doing so. A yoke of oxen could not have pulled him away.

The preparations for the event went on for a week under Simon's Roman nose, and every child in Branch knew all about it; but to him it was a serene, safe and unguessed secret. He saw two barrels of cider go into his cellar, and never asked a question; his wife and mine fried doughnuts by the hundred and made mince pies by the dozen, but not a scent thereof was betrayed to his nostrils; he heard the village brass band practicing each night for a week, and not once complained of a headache; and on the final day, when the village boys were hauling empty barrels and boxes from the store loft, with which to prepare a bonfire on the village green, he kept to the orchard and never cast an eye toward their work.

He was so happy in his crafty innocence that I would not have undeceived him for anything in the world.

Toward evening of the great day, I said to him in a casual way: "Don't fail to be at home to-night, Sim. Uncle Horace and Aunt Sabrina said they would be up to see you about their apples."

"That so? I had thought of driving over to the Creek, but of course—"

"Better put it off."

"Well, I'll see."

After supper he appeared in his oldest coat and boots, and by his entire get-up suggested one who had no dream of standing in the glare of the great public eye. He lounged about the store with a pipe in his mouth, but towards dark disappeared into the house.

At half-past seven, the heap of wood upon the commons burst into a sudden blaze, and made the little town as light as day. In ten minutes every boy in the neighborhood was on the scene. A blare of sudden music filled the air, and up from the tavern stable came our band in full uniform, followed by a great line of men and Squire Savage at their head. By the time they reached the gate the House yard was filled with women.

The procession halted at the front door and the band played "Hail to the Chief," with all the "go" that neighborly patriotism could put into it. There were calls of "House! House!" and in a moment Simon appeared from the darkened recess within, with a look of wondering amaze upon his face. He was greeted with a cheer, and when it ended and the band had blown itself breathless, Squire Savage stepped to the front and made a warm and manly speech, congratulating the sheriff-elect, and telling him that the goodwill of the neighbors went with him.

As Simon had forgotten to shut his mouth when he came out, and held it open all through the speech, his appearance was not expressive, but the hearty earnestness with which he made his response was atonement.

"I am rather short of words just now," he said. "I have lived here a great many years, and have tried to do right by you all, but a man in business makes a great many enemies, especially if he buys butter and cheese. I didn't know how you felt toward me, but this settles it. You might have given me notice, and I would have had Hank here get up one of his highfalutin' speeches and fire it off for me, but you've got to take what I have. Suppose, instead of words, you walk into the house and see if we can find anything of a more substantial kind. I thank you all for this call, and if the boys need anything more for the bonfire, why there's the woodpile!"

Then they poured into the house, and all the women of the neighborhood passed around pie, and doughnuts, and apples and cider, while the men ate and drank and joked Simon about boarding with him in jail, and then went out on the fence and depleted a box of our best cigars. It was a hearty, honest and warm-hearted send-off, and the goodwill that prompted it, sent my partner into his official career with a home-blessing that made a new glow down in his big official heart.

When he had gone to Grange, in the winter season, increased labor and responsibility fell upon me as the sole manager of the store. He was where he could assist in the buying, but all the selling was in my hands, with the assistance of a country boy who had been called in to take my old position of clerk.

This boy, who was near sixteen years of age, looked twelve when at play, and about twenty-five when seriously engaged in upholding the dignity of the establishment. His salary was small, but he made it up by a little enterprise of his own, that had been carried on some weeks before I learned of its wide-spread commercial ramifications.

In some way Reuben—his mother was romantic, and his full name was Reuben Stableford Nightengoomshell Joseph Hazledine—had made a bargain with a furrier in Grange to supply him with cat skins at twenty cents each. By that mystic sympathy that is the very essence of boyhood, Reuben had got word to all the urchins of three townships, that cat skins delivered at our barn were good for ten cents each; and great was the slaughter in all that land. About twice each day some little rascal with a covered basket on his arm, or a closed box in a cart, would pass the store, stroll down the lane to the barn, and sit there and whistle until "Rube" could make an errand in his direction. It was a part of his policy that the cats should be delivered to him alive, as I believe he took more pleasure in the killing and flaying than in the accumulation of profit. There was a terrible increase of rats in our neighborhood for the next two years. I have mentioned these trivial facts simply to illustrate the extent of help upon which I had to depend in running the store.

I can honestly say that no young man ever worked harder or with more sincere energy than I did then. My

Digitized by Google

whole soul was in the business; the money my father had loaned was at stake; the love and courage shining in the eyes of my wife were like the blessing of some fair saint that must be earned to be held secure; and before long a little stranger lay in a wicker nest at home—and its faint cry was the loudest call of all.

This labor was kept up without vacation or ill-luck for near five years. Simon completed his second term, and came home with a most excellent official record. Reuben developed into an efficient clerk, with a salary sufficient to make outside speculations unnecessary. I paid my father every cent of the money he had loaned me; and had a one-fourth interest in the business, which had grown somewhat, and gave promise of better things in the future.

Condition of Returning Emigrants.

As is well known, large numbers of persons who emigrated to the United States in former years are now returning to Europe in search of employment. They are people who have saved at least enough to pay the cost of the trip, and therefore belong, for the most part, to the better class of immigrants. Not infrequently, families that have become American citizens, with children who were, perhaps, born in the United States, arrive in Switzerland, for instance, after expending their entire resources for the trip. They are impelled to take this serious step by the same hope of improving their material condition that once led them to seek a home in the new world. So far as that part of Europe is concerned, these hopes are generally far from being realized, for there is hardly employment enough for persons already settled here.

The chief branches of business in the centres of Basle and Neuchatel—ribbon-weaving, watchmaking, and the manufacture of colors and chemicals—are not enjoying a period of especial prosperity, and are by no means in need of an increased number of operatives. The building trades and day labor are more than amply supplied by the resident working people and by the large number of Italians whose services are sometimes employed to the exclusion of the natives of the country on account of the extremely low wages with which they content themselves. The consequence is that the returned emigrants often find themselves in a state of complete destitution soon after their arrival. While seeking in vain for employment, they have parted not only with their money, but also with all the clothing and effects they can spare. American citizens and others in this unfortunate situation often apply for assistance to return to the United States, having the impression that there are Government funds available for that purpose. "If I could only get back home I should be all right. I could earn something at least, but here I shall starve," is the expression which, with many variations of form, is now constantly heard. Some of these people, to be sure, are not especially deserving, and have no claim to assistance as American citizens. But there are enough of the latter, who are at the same time honest and industrious men, to make the matter one of serious consequence. The resources they sacrifice for the trip to Europe, and while looking for work here could be better used in awaiting a complete revival of business at home, even in cases where it is impossible to find employment at reduced wages, for here business is duller and wages lower than in the United States, so that, even where a returned emigrant finds work, it will take him a long time to earn enough to go back to the United States, should he ever desire to do so.

Basle, November 17, 1894. GEORGE GIFFORD.

The Gillette Clipping Machine Co., No. 201 East Twenty-third Street, New York, have made arrangements by which J. H. Fenton & Co., No. 153 Michigan Avenue, Chicago, have become their Western agents, and all matters in that section, if sent to them, will receive immediate attention.

A Gentle Drummer.

Mrs. R. E. Ludlow has been representing Baldwin, Son & Co., hollow-ware makers, Stourport, England, three years, and also the Darlaston Galvanized Iron Co., and the Enamelled Hollow-ware Co., Kirrweiler, and has several times been appointed to arbitrate for her firms on business disputes. Her late husband was the senior partner in the firm of Ludlow Bros., Birmingham, manufacturers of general galvanized ware. Mr. Ludlow was extraordinarily well known, and most highly respected, and on the occasion of his death hundreds of sympathetic letters from customers were received by his widow. Mrs. Ludlow soon afterwards decided to take up the representation of two or three firms on the journeys formerly covered by her late husband. She had accompanied her husband on more than one occasion for pleasure only, of course, and so she was not an entire stranger. "I found my new avocation rather difficult at first; ironmongers, you know, have the reputation of being rather conservative; but I didn't intend to get disheartened," said Mrs. Ludlow, with a very determined little shake of the head. One thing especially gained her much esteem, she never looked for any order for mere sympathy—sympathy is not business, you know, and all that Mrs. Ludlow wanted was to be considered simply as a commercial traveler, and for her goods to be taken entirely on their merits. Mrs. Ludlow says she finds for the most part a frank and friendly recognition accorded to her by other commercial travelers. She declares them to be a most gentlemanly body of men, who treat her with every respect and consideration. Mrs. Ludlow has ten journeys, covering the country below Derby and the Eastern counties right away to Penzance, and visits her customers three times each year. She starts away on Monday mornings, and as a rule manages to return to her home on Friday evenings. It is very hard work, but the constant change of scene is very pleasant. Still, Mrs. Ludlow would not recommend it to ladies generally, even as she would not from choice do it herself. She studied the trade journals, and made herself thoroughly acquainted with the trade and its movements. She has very decided opinions as to the ethics of commercial traveling, and as her business is to call upon ironmongers she would not on any account call upon drapers or other outside competitors. She considers that ironmongers as a rule are quite as up-to-date and as enterprising as the drapers. Mrs. Ludlow has only met two other lady travelers, one of whom represents a manufacturer of perambulators, and the other does in lace lamp shades, so that it would not appear that the ladies have invaded the commercial travelers' territory in very formidable numbers.

Among recent telephone improvements is an attachment for neutralizing the disagreeable sounds produced in the telephone by induction, and enabling the hearer to concentrate himself on the conversation he is listening to undisturbed by surrounding noises. A cushion of soft gum rubber is fitted into a metal rim that clamps over the end of the telephone receiver. This cushion is adjusted so as to give exactly the right distance between the diaphragm and the ear-drum, and is said to improve the hearing of telephone talk fully fifty per cent. As the cushion is large enough to entirely close the ear, the advantage of a sound-proof booth is practically secured.

The Berlin Iron Bridge Co., East Berlin, Conn., have just completed for the town of Hadley, N. Y., a bridge 300 feet long and 16 feet wide. The same company have also lately completed a new storeroom for the Hartford Rubber Works, a new car house for the Norwalk Tramway Co., at South Norwalk, Conn., and also a new generator house for the Burlington Gas Light Co., Burlington, Vt. They report work as very brisk in all departments.

NOTES TAKEN BY THE WAY.

The store of W. O. Baker, Westerville, Ohio, was recently entered by burglars. Cutlery, revolvers and glass-cutting diamonds were taken, to the extent of $100.

Burrows & Goodwin, Lewis Centre, Ohio, report a good and increasing trade. They are an enterprising firm, and mean to increase the stock and business. Send them your catalogues.

Who, that has ever met clever Charlie Cussins, of Cussins & Fearn, Columbus, Ohio, can forget the genial, big-hearted man and not go away feeling that something has been left behind? It's only a part of one's heart that has been left to the boy who makes all men his friends. May their business, now reported double that of '94, be double the present business, in '96.

Among the attractive new stores that I have discovered by the way, is that of W. W. Gillivan, No. 1173 West Broad Street, Columbus, Ohio.

There is no truth in the rumor that "Pete" Hibbard, of the Hibbard Hardware Co., Athens, Ohio, will forsake the Hardware business to enter the field as a tonsorial artist. While he has fully demonstrated that he is an adept at hair cutting, his ability in that line hardly equals that as a "fish story" teller. However, he always allows some one else to catch the fish, being content to relate the exact size and weight.

P. M. Teegarden & Co., Canal Winchester, Ohio, carry a full and complete line of Hardware, house-furnishing goods, stoves, ranges, etc., and report business very much better than in 1894, and steadily improving. Mr. Teegarden will spend a couple of weeks in the mountains of West Virginia deer hunting.

While spending a half-hour with the genial "Will" Vorhes, of W. M. Vorhes & Bro., Lee P. O., Ohio, dealers in Hardware and furniture, I learned something that may be of value to readers of HARDWARE. Will has been bothered by the breaking of his large lamp chimneys, and discovered that by placing a piece of wire cloth over the top, simply cutting it large enough to cover top and letting it rest on the chimney, the breaking was avoided; in fact, has not had one broken since trying it. Hardwaremen using large lamps would do well to give it a trial.

E. D. Warren, Nelsonville, Ohio, has one of the prettiest stores seen in a day's travel. He carries a full line of Hardware, house-furnishing goods, stoves, ranges, paints, oils and glass. He reports trade very good, and especially so in the tin and slate roofing business. His store was destroyed by fire in February, and he opened in March in his present location. He had just returned from Piqua, Ohio, where he spent a couple of days as the guest of the Favorite Stove & Range Co.

While in Middleport, Ohio, I ran against jolly W. R. Johnson, Bindley Hardware Co.'s river salesman, and it is a pleasure I hope to soon have again. W. R. will dispel the "blues" quicker and more effectually than anything I know of. He reports trade good, and getting better.

H. J. Vanden & Co., Gallipolis, Ohio, are one of the oldest Hardware houses in the Ohio valley. This house was established in 1840 by James Vanden, and has met with the best of success. Mr. Vanden is now in his eighty-first year, but still hale and hearty and able to pay his daily visit to the store. May his years be many more.

Arthur Edwards, Point Pleasant, W. Va., is a Hardwareman with his whole soul in the business. He carries a complete line of everything usually found in a Hardware store, and is enjoying the trade he deserves. He is a genial and clever gentleman, and enjoys many friends.

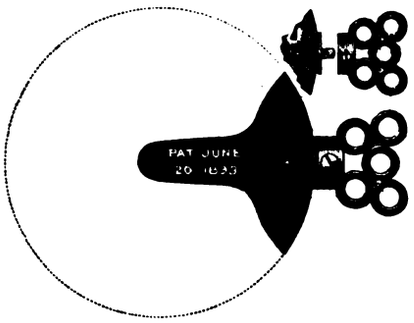
Those "hustlers," Roberts & Cross, Racine, Ohio, have one of the neatest, prettiest and best stocked Hardware stores in southern Ohio, and are having a trade their enterprise deserves. They have put in shelf drawers, displaying a sample of everything, and the effect is something to be admired. We congratulate them upon their good trade and pretty store, and wish them a prosperous year.

A burglary has occurred in the store of Logan & Higgins, Lexington, Ky. Arms and ammunition taken, and the loss small.

The trade in Ohio is something to puzzle one. While the prevailing sentiment is that business is a decided improvement over last year, there are a few complaints just the other way. The continued drouth through this season has had much to do with this, and the fact that farmers have had nothing to sell has kept trade down. The corn crop now coming in has brightened trade considerably, and all are now cheerful and expectant of a good fall trade.

Builders' materials and shelf ware have not figured very largely in the year's business until recently, but is now counting up. The universal verdict on stoves, ranges, house-furnishing goods and agricultural implements, is that the sale has been more than for the past two years. The sale of "bikes" in this section has been enormous, with a prospect of continuation.

There is a growing desire manifested among Hardwaremen the country over to "get out of the rut," and in consequence the "fin de siecle" Hardware store rivals in appearance, convenience and neatness the heretofore invincible drug and dry goods stores. This is commendable, and is a pleasing feature; in fact, one that affords those interested in the Hardware business much satisfaction, and promises much for the future. The dingy, inconvenient and unsightly Hardware store with its jumble of this, that and the other, unsightly and inconvenient holes and corners for reception of a veritable "hash," its dusty and dirty appearance, once considered a necessary evil of the business, will soon be a thing of the past, and in its place will be the store arranged with a view to economy of space, convenience, order and pleasing effect. Heretofore it was a case of hunt, fish, and finally "I don't know whether we have it or not." Soon it will be, "Yes, sir; how will this answer?" The saving in time in the new method of displaying goods is quite an item, to say nothing of saving of wear and tear on patience and temper of both salesman and customer. Not one in ten customers in a Hardware store can tell exactly what he wishes. The display drawers overcome it, and he sees just what he wants. There is also being shown a disposition to place all bulky goods in warehouses, and there have been a large number erected this year. In fact, Hardwaremen realize that it is just as necessary for them to properly display their goods, and do so neatly, nicely and to best advantage, as it is for the dry goods merchant. Now, as the reform has been started, let all try to give it a boost along.

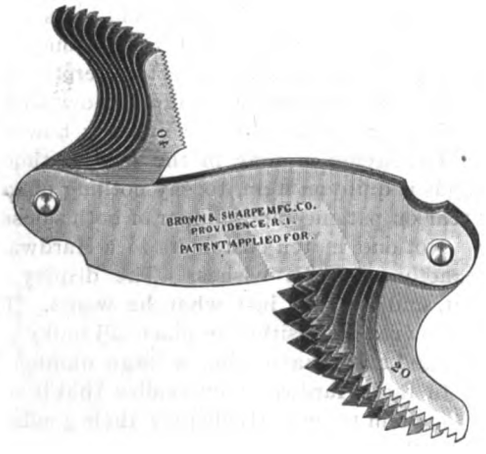


I would like to suggest that a little more attention accorded the display of a Hardware store will more than recompense for the additional time and trouble. A nicely dressed window will attract more attention than a dozen display cards marked "Was 50 cents; reduced to 49 cents." Apropos of windows, H. W. Tonner, Steubenville, Ohio, is an expert in window dressing, and makes it a point to change them often and have them rightly done. The writer stood for an hour just outside and listened to laudatory comments on the same, and was more than convinced that time and money spent in making your windows attractive was indeed well spent. I will say he displayed cutlery in one window and tools in the other, and an at-

Digitized by Google

tractive display it was. A little ingenuity, time and expense will make your windows pretty and cause people to stop, look and finally come in. Think on it, and if you agree with me, act on it. "CARO."

Columbia Damper Clip.



George T. Moe & Co., Philadelphia, Pa., are offering to the public the Columbia Damper Clip here shown. The manufacturers say "that the Columbia is the best clip on the market, being simpler in construction than any other, with nothing about it that can get out of order." The

handle is in one piece and will not go on more than one way, thus doing away with the danger of putting the damper together wrong. The set screw works on a slot inclined to the damper proper, by this means, tightening the set screw regulates the pressure on the pipe, so that the damper will stay in whatever position it is set. If the pipe is worn, a turn of the set screw is all that is required to make the damper tight again. The sheet is made from the thinnest metal up to ¼-inch thick.

New Screw Pitch Gauge.

The Brown & Sharpe Mfg. Co., Providence, R. I., are placing on the market the new No. 20 Screw Pitch Gauge here shown. It has twenty pitches, and in describing it the makers say: "This Screw Pitch Gauge will measure the threads of nuts as well as of screws, and contains the pitches 9, 10, 11, 12, 13, 14, 15, 16, 18, 20, on one end, and 22, 24, 26, 28, 30, 32, 34, 36, 38 and 40, on the other end.

The arrangement of gauges hinged on each end of the case enables any desired number to be quickly placed in position for use. Special attention is invited to two points, which add to the value of the Gauge: the fact that the 10 smaller pitches are on blades made narrower than the 10 larger ones, so that they may have a wider range of use in measuring the threads of nuts; and also that the gauge numbers are stamped on the outside of the frame, as well as on each blade, allowing the user to determine the position of a desired number at a glance."

F. W. Smith, president of the Smith & Egge Mfg. Co., Bridgeport, Conn., has gone abroad in the interests of the extensive and busy company of which he is the official eahd.

Henis Press and Masher.

One of the attractive features of the Food and Health Exposition, now open in Madison Square Garden, is the display of William Vogel & Bros., Brooklyn. Their booth is decorated in maroon and silver, and one of their main attractions is a Henis Fruit and Vegetable Press and Potato Masher, an illustration of which is here shown. Its actual operation is shown by a demonstrator to large numbers of visitors. The operation is thus described: "Take your boiled potato, put it in the press, jacket, eyes, and all—the press takes 'em off, and at the rate of only one stroke per potato. A dish, new in looks, sweet in flavor, a marvel of lightness and a revelation of the goodness of potatoes, is the result. Your potatoes need never be soggy, nor your turnips or squash stringy or watery. Is it necessary to go through the whole long list of vegetables? Has not your mind already added trick after trick to the vegetable chapter? And grapes too. Throw away your strainer and colander, line your Henis Press with cheese cloth or other light material, and bid good-bye to all your fears of swallowing the seeds or pits, and the resulting dreadful surgical operations. Jellies, jams, and juices are quickly and easily turned out without waste, and better results are obtained from less work than any woman ever knew before. Boil your apples, pears, and quinces whole, and let the press separate the stems, seeds and skins from the fruit." A note addressed to Vogel & Bros., Brooklyn, N. Y., will bring further detailed information concerning this useful little machine.

A dispatch from Chicago says: Two young clerks in the employ of Hibbard, Spencer, Bartlett & Co., the wholesale Hardware merchants, were caught stealing. Mr. Hibbard told them they could choose between jail and wearing cards with the words "I am a thief" printed in large letters. They chose the placard punishment. Mr. Hibbard hung the two placards around the necks of the two young men and took them all over the establishment, so that every employee in the large building might witness the disgrace into which his thieving fellow-workmen had fallen. After this Mr. Hibbard called a large colored man in the employ of the firm and stood him between the two young men at the exit, where every man and woman in the store would see them when passing out at six o'clock. They were then discharged.

Meier, Heldt & Rosenfeld, proprietors of the "Humboldt," general merchandise, Nos. 743 to 747 West North Avenue, Chicago, are in the market for general Hardware, and would be pleased to receive catalogues from the trade. Mr. Rosenfeld, who has charge of the Hardware department, is well known to the trade in Chicago, and although yet a young man, is what is named in the language of Chicago "a hustler." They have put up a plant at an expense of over $70,000, and are in a locality for large and excellent trade.

It is announced that the co-partnership heretofore existing under the firm name of Linsley, Root & Co., New Haven, Conn., has been dissolved by mutual consent. Frank J. Linsley and Robert C. Lightbourn formed a partnership to continue the business under the firm name of Linsley & Lightbourn.

Standard Fibre Ware Co., Mankato, Minn.: We like your paper as an advertising medium, and think it one of our best Hardware papers to make known to dealers what manufacturers are making.

Digitized by Google

HONESTY IN SMALL THINGS.

Mr. Merchant, I ask you this personal and pointed question: Do you feel it your duty to inculcate such lessons of honesty into the minds of your clerks as you should?

There were many good things in the old-time relationship of master and apprentice. In many ways it was much nearer that of father and son than is the situation between employer and clerk to-day. We ought to get back to the old spirit and feel that we are responsible to society, to the young man, and to our better selves in the way in which we do our duty by our clerks.

Here are boys and young men looking to us for their standards of a business life. It is our duty to give them a chart so clear and so true that it shall guide them safely through the sea of temptation to the port of honor.

We cannot too constantly glorify honesty. It is the basis of all trade, no matter the line or the volume; equally with the corner grocer, the princely retailer, the jobber and the banker. It is the foundation stone of the only edifice of personal character that is worth having. It is a reputation of far greater value in the markets than is the possession of riches. The poor man with this reputation for honesty can secure that which is denied to the rich man who has it not.

But looking over the business world and the relations between modern merchants and their clerks, it seems to be taken for granted that the employer has no concern regarding his clerks, except to see that they perform the labor for which they are paid. He fancies that his abilities are so great, and known by them to be so, that they would not dare steal so much as a nail from him. That some clerks do steal from their employers he is well aware, but his confidence in himself is so great he passes this by, saying that those clerks could not have hoodwinked him in any such manner. We are all very kind in our judgments of ourselves.

There is but one way to train a clerk in the ways of honesty in which he should go; this is by giving him precept upon precept; by setting him a good example, and by no means least, by never relaxing proper watchfulness over him.

The French have a saying that

"Opportunity makes the thief."

That this is true, every man of experience will bear witness. The men who go wrong are very largely the most trusted ones; the ones who know that their figures will not be checked back, nor their balances verified. The confidence placed in them becomes carelessness; they see this, and the tempter whispers that it would be both safe and easy for them to help themselves, and they finally fall.

The boy who comes into your store should be taught, and taught so that it will impress itself upon his mind as a matter of the greatest importance, that what is yours is not his, and that you expect him to be as scrupulously honest about a trifle as you do with the cash in the drawer.

I once talked with a man who had served a term in prison for embezzlement; he said that the first step in his downfall was the stamp drawer. The clerks in that store, as in many, if not in most stores, helped themselves to stamps from this drawer for their private letters, using the firm's stationery also. What more natural than that they should take a few more stamps if they were ordering some trifle by mail? Having made this start and seeing no trouble therefrom, how easy it was to take a larger amount when a more expensive article was wanted! The step from the dollar's worth of stamps to the dollar itself was not a very long one, and then to larger amounts, followed at length by discovery and prison! This was the man's story, and it set me to thinking.

One would suppose that one such example as this would be a life-lesson to all clerks, but it is not, and it makes very small impression upon those who hear it. A gentleman was giving me the details of his experience with a dishonest bookkeeper whom he sent to prison. Of course, it was the one topic of conversation in his store, a large concern in one of the leading cities in the United States, yet within a few weeks of this trial he discovered a young man in the retail department stealing from them, by entering his cash sales as less than they were and pocketing the difference! If clerks are to be deterred from dishonest practices by the punishment of those detected in crime, here was a place where the rule should have done its work, but the truth is that every dishonest clerk imagines that his scheme is absolutely safe and never can be discovered.

A man who has a large mail business was speaking regretfully of the fact that so large a part of his remittances came in the form of postage stamps. I asked him why he accepted them.

"For two reasons," he said; "in very small places they are all that can conveniently be obtained to send for small amounts; the other reason is, a very large part of the postage stamps I receive come from clerks in business houses. Where do they get them? I fancy a large share of them come out of the stamp drawers in the stores where they are employed, and if I refused to accept them I would lose just that much trade."

The boy who helps himself to a stamp will very soon present his pocket with a knife, and then with something of greater value. If a comrade to whom he happens to show the knife wants it so much that he buys it then and there, your clerk has accidentally been shown an easy way of turning your goods into cash for his own benefit, and he may not stop with this one transaction.

In a majority of small retail stores the cash received from sales is dropped into the drawer and no minute of any kind made of the transaction. Every clerk knows that there is slight, if any, chance of his being detected if he pockets all or part of the proceeds of a sale that he makes when others around him are busy. The opportunity is so inviting that he cannot resist it, and the downward course is started. But if a jury of business men were to pass upon all the circumstances of the case they would be compelled to place the greater share of the blame upon the employer because of his unbusiness-like methods, or rather lack of method.

The cases of dishonesty upon the part of clerks that are made known to the world are but a small part of those that are discovered by their employers. Frequently the dishonest act is punished only by the discharge of the one caught in it, and the world is better because this is so. Not everyone so discovered is beyond the hope of redemption. Many men occupying positions of trust to-day were caught doing wrong in their youth, were given another chance, and proved themselves worthy of trust.

I pass almost daily a man who is filling a responsible position honestly and well, who was, ten years ago, caught stealing from his employers. The circumstances were carefully considered and he was told that he would be given another chance. His pay had been small. He had a wife and baby. He wanted to do more for them than his wages justified, and he fell. But when he faced the possible disgrace, the prison, the awful gulf yawning before him, he fell on his knees and pleaded so piteously for another trial that it was given to him. I think the recording angel felt happy as this was written down to the credit of the men who showed such mercy. He secured another situation.

Digitized by Google

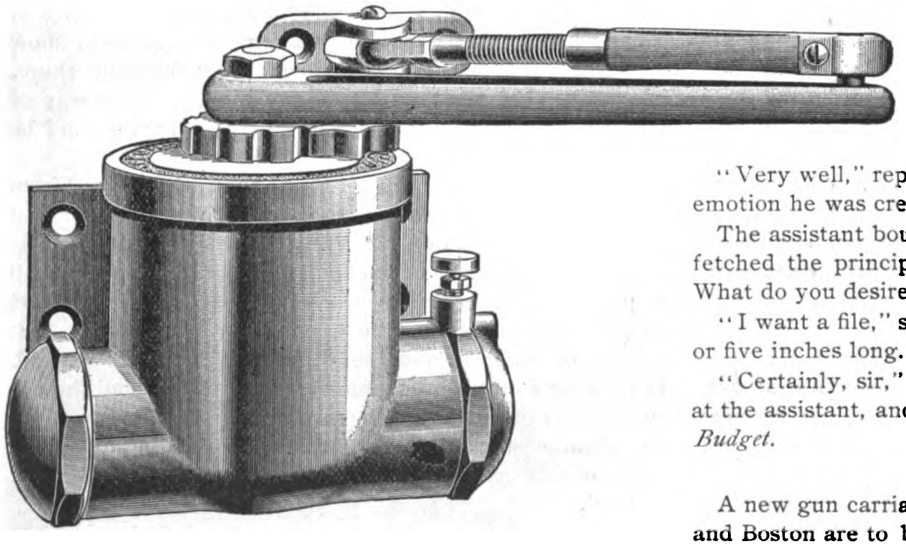
He has done his work well, and knowing all the circumstances, I would not hesitate to trust him fully to-day.

We need to keep constantly in mind the remark of the Widow Bedott: "We are all poor critters."

It does not become us who have so many sins on our own heads to judge with too great severity those who lapse from the straight line of honesty. Especially do we need to ask ourselves how much were we to blame in it all? Did we open the way for the crime? Did we make it easy to accomplish?

The Saviour of all mankind told us to ask God daily to "Lead us not into temptation."

It is a wise prayer. But do we lead others into temptation by placing stumbling-blocks in their path; by refusing to take ordinary precautions to preserve their honesty? Is every transaction in the store one that will bear the full light of publicity? Do we pat our clerks upon the back when they overreach a customer? If we do these things we are leading them into a pitfall and wronging them as well as wronging ourselves. If they fall they should not bear the punishment alone.



Yes, that is a good prayer for both merchants and clerks:

"Lead us not into temptation."

An Old Merchant.

Blount Door Check and Spring.

The Yale & Towne Mfg. Co., Stamford, Conn., have by recent arrangement become the sole selling agents of the Blount Door Check and Spring, which is herewith illustrated. The operating mechanism consists of an actuating spring and a controlling cylinder and piston, with automatic valve. Suitable brackets and arms are provided for

attachment to the door and its frame. It contains two opposing powers, namely: the Spring, which operates to close the door, exerting its greatest power when the door is nearly closed, and the Check, which, by the cushioning of the piston on the liquid in the cylinder, controlled by an automatic valve, regulates the closing of the door, so that as it nears the jamb it almost comes to a stand-still, and then quietly but positively closes by the operation of the spring.

The company say "that the parts of the device are so organized that the greater the force exerted to close the door the greater the resistance which will be offered by the checking device, thus enabling it, under all conditions of pressure from hand or draft, perfectly to control the closing of the door."

It is constructed in six sizes, for use on all sorts of doors, from the lightest to the heaviest, and the prices range from $3 to $10. It is furnished in a variety of finishes, including gold bronze, silver bronze, brass, bronze, nickel, copper, oxidyzed silver, or in solid brass or bronze if desired. The company (in referring to the pamphlet descriptive of the Check) which they are distributing say, "in presenting articles of this kind we have adopted a new method, which consists in illustrating not only the external appearance and internal construction of the device, but also its appearance and method of application under a variety of actual and typical conditions of use."

The pamphlet contains illustrations showing the Check in operation in the Postal Telegraph Building, New York; on a Pennsylvania Railroad ferryboat, and at other places of like character.

Sothern's Little Joke.

The following little story is told by Mrs. John Wood. She and *Lord Dundreary* were playing at Birmingham, when they accidently met in the neighborhood of New Street, shook hands and bade each other good morning.

"Would you mind going in here with me?" he said. "I want to make a little purchase;" and they entered an ironmonger's shop.

He went up to the counter and said: "I want Macaulay's 'History of England.'"

The assistant replied: "We don't sell books, sir; this is an ironmonger's shop."

"Well, I'm not particular," said Sothern, pretending to be deaf. "I don't care whether its bound in calf or russia."

"But this is not a bookseller's," shouted the assistant.

"All right," said Sothern; "wrap it up neatly and send it to my hotel. Put it up nicely; it's a present I wish to make a relative."

"We don't keep it," shouted the assistant, red in the face.

"Do it up as if it were for your own mother; I don't want anything better than that," said Sothern; "and I'd like to write my name on the fly-leaf."

"Sir," bawled the assistant at the top of his voice, "can't you see that we don't sell books?"

"Very well," replied Sothern, quite undisturbed at the emotion he was creating. "I will wait for it."

The assistant bounced to the other end of the shop and fetched the principal, who asked loudly, "What is it, sir? What do you desire?"

"I want a file," said Sothern, quietly, "a plain file, four or five inches long."

"Certainly, sir," said the principal, with a withering look at the assistant, and produced the article needed.—*London Budget.*

A new gun carriage, with which the forts of New York and Boston are to be equipped, has been invented by Colonel Buffington of the Rock Island Arsenal, and promises to be quite an improvement over the carriages formerly used. In this invention the gun is mounted on the upper arms of two long arms or levers, which are themselves mounted on a pivot joining them near their middle joint, while from their lower joint is hung a counterpoise which is but a small per cent. heavier than the gun. The recoil of the gun when it is fired overcomes this preponderance in weight and it is thrown back into the fort out of sight of the enemy, where it can be reloaded with safety. By mechanical means the gun is first thrown nearly straight back till the muzzle is clear of the port hole, and then it descends as the counterpoise rises. The gun is held down in this position by a clutch until reloaded, when it is easily released and again put in position for firing. These carriages have been constructed for guns as large as a twelve-inch, and a ten-inch gun has been fired as rapidly as ten shots in eleven minutes and forty-two seconds. One officer and eleven men are required to operate each gun.—*Davenport (Iowa) Times.*

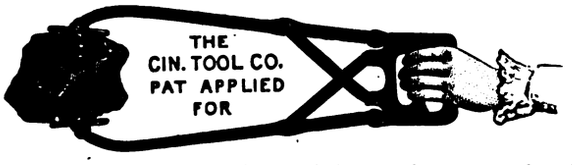
NEW GOODS IN THE MARKET.

If you have anything NEW, let the world know it by illustrating it in these columns.



NO CHARGE WHATEVER is made, direct or indirect, as our interest lies in showing the readers of "HARDWARE" where the LIVE manufacturers and wholesalers are, and what they are doing.

When your NOVELTY or SPECIALTY is ready, send us an Electrotype and descriptive matter, which will appear immediately.

The Hardwaremen everywhere read this department; it is to your interest to make prompt use of it.

Perfection Coal Tongs.

The Cincinnati Tool Co., Cincinnati, Ohio, are offering the Coal Tongs herewith illustrated. The action of lifting

the coal closes the jaws, the weight coming upon the slide. The heavier the lump the easier it can be handled. It is stated that a child can use them with ease, and there are no springs to get out of order. The total length of the tongs is 15 inches, and they open to a width of 9 inches. They are furnished nickeled and japanned.

The Boss Sign Printer.

Weaver, Palmer & Richmond, Nos. 31 to 35 E. Main Street, Rochester, N. Y., are introducing to the trade the Sign Printing Outfit herewith illustrated. Each set consists

Best

of full alphabet of capitals, lower case letters, figures, dollar and cent mark, points, complete set of ornaments, pair of ink pads, large metal tube of ink, rule that will not slip while in use, and nickel-plated sliding spacer. Each letter is plainly marked on the top so the required one can

be picked out at a glance, and the whole set is inclosed in a neatly finished wood case. The words "Best" in the illustration show the exact size of the letter. The price of the set is $4.00.

Self-Pouring Tea and Coffee Pots.

The Asbury-Paine Mfg. Co., Wayne Junction, Philadelphia, Pa., are putting on the market a line of Self-Pouring Tea and Coffee Pots. Fig. 1 is a sectional view of a teapot. The spout extends downward over the front of the pot to the bottom, forming a passageway the entrance to which is protected by a strainer which fits completely over

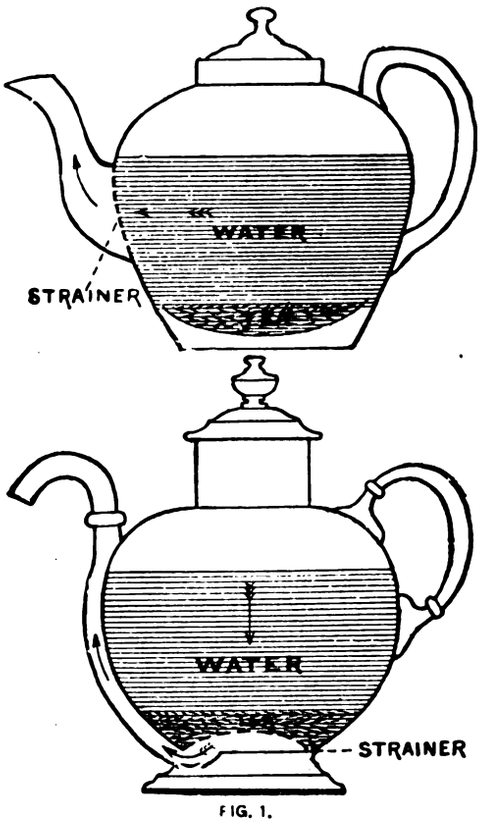


FIG. 1.

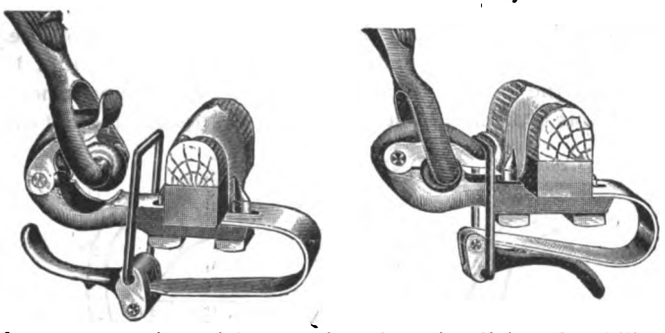
the bottom of the pot. The cover or lid is attached to a hollow cylinder which slides within the neck of the pot, but is tight enough to prevent an escape of air. The ornamental knob on the lid has a small air hole communicating with the cylinder. When the lid is drawn up air enters the pot by way of the air hole and when the cylinder is depressed pouring is effected. Advantages claimed for the pots are that pouring from the bottom, beneath the tea leaves or coffee, every drop of liquor has to pass through the matter, and a better and more uniform beverage results; that the pot has not to be lifted from the table, and



that the pouring action being instantly stopped there is no drip, and the danger of soiling a tablecloth avoided. The pots are made of sheet steel, tinned and nickel-plated, also in German silver and white metal, with quadruple silverplate. The finer goods are made in handsome designs, such as are followed by leading manufacturers of silverware, with extended spouts.

Digitized by Google

Bradley's Shaft Coupling.

C. C. Bradley, Jr., P. O. Box 12, Syracuse, N. Y., is placing on the market the Shaft Coupling shown herewith. The illustrations represent the coupling both open and closed. The features recommended by the manu-

facturer are: its quickness of action, simplicity, du ability and its non-rattling qualities. It is further stated that there are no nuts, bolts, screws or rubbers, and a wrench is not needed to adjust it. Also it saves space in a stable, as the shafts can be removed from the vehicle, thus giving increased floor space.

No-Germ Filters.

The Victor Mfg. Co., Saginaw, E. S., Mich., are offering to the trade the Water Filters shown here. The illustrations represent the filters one-half the full size. Fig. 1 is intended for use on a faucet with a ¾ inch hose pipe thread. Fig. 2 is for use on a plain faucet. The filtering medium used in these filters is Tripoli natural stone. The manufacturers say that "the filter is neat in appearance and the construction first-class." The water passes through the filtering stone B and is delivered filtered into center of stone D and at outlet G. All impurities are deposited on the surface of the stone, from which they can readily be removed by brushing. E is a cap that is cemented on to bottom of stone and screwed to bottom of filter F, with the outlet screw nut G, a pure rubber washer being placed between E and F, preventing unfiltered water passing from

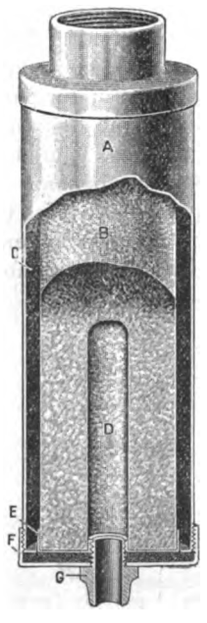


FIG. 1.

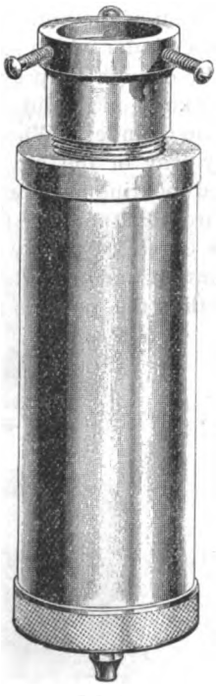

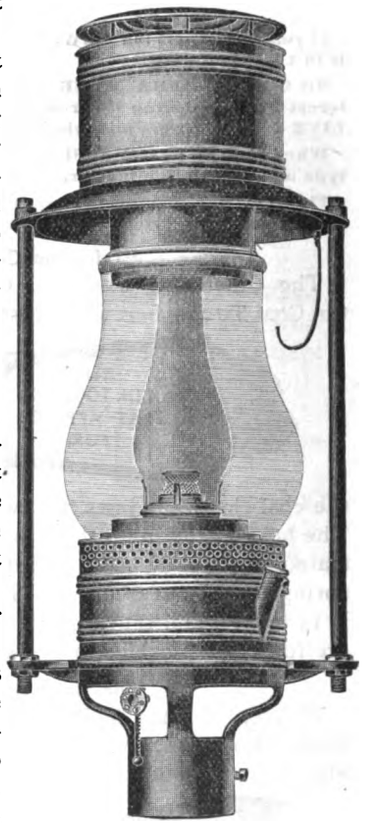

FIG. 2.

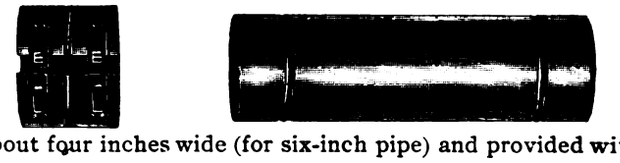
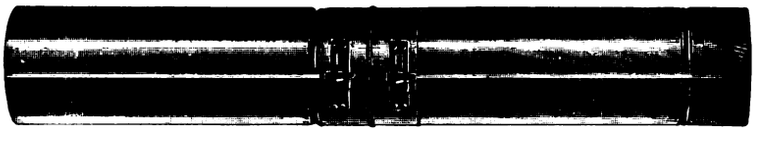
the filter, and also making a tight joint between outside shell A and bottom F. It is further stated that the arrangement for removing the stone for cleaning is very simple. This natural filtering medium is unlike any other stone. It does not absorb and receive into its pores the filth it extracts. Impurities never penetrate, but lie on the surface of the stone, which should be cleansed, when necessary, with the brush provided, and afterwards rinsed. This removes an imperceptible amount of the surface of the stone, presenting a fresh filtering surface to the water. After long use the stone will be found internally as pure and white as when originally mined. The wearing away of the stone is the important feature of its success. The stone will last at least one year and often much longer, varying according to condition of the water supply. They are furnished in brass, highly polished and nickel-plated, and no parts of glass or other weak material to break by pressure or falling.



Miller's No 53 Street Lamp.



Edward Miller & Co., Meriden, Conn., are offering to the trade the Street Lamp illustrated here. The frame is of black iron with lamp and top in green. It is fitted with a socket 3¼ inches, inside diameter, for use on post or bracket. The fount holds two quarts of oil, enough to keep the lamp lighted twelve or fifteen hours, according to the height of the flame. The burner is of the centre draught pattern. The lamp is said to give a steady white light, the flame being regulated by turning the button under the fount.

Improved Pipe Joint Cover.

James Woodside, Hawarden, Iowa, has patented a Pipe Joint Cover which will be placed on the market as soon as arrangements with the manufacturers can be consumated. The joint cover consists of a narrow band of sheet iron

about four inches wide (for six-inch pipe) and provided with clips and binding keys to draw the band tight and hold it firmly together. The band has also a head or groove extending circumferentially around the center which is to fit over the beads on the common pipe, as the bands work on old style as well as especially made pipe, and also to fit over the lips or burrs on the ends of sections of especially made pipe when said special pipe is used. The special pipe sections are made the same size at both ends and do not slip one into the other as does the old style pipe, but the ends of the section butt up together and meet in the groove of

the band. The inventor says, "pipe put together with these bands will last much longer than the old method pipe, besides being always straight and absolutely solid and secure, and is positively gas and smoke tight and no fear need be entertained about the pipe falling down or coming apart and smoking the walls or spoiling the carpets with soot and dirt, as frequently happens with the old style pipe." No wires are needed, it is claimed, in putting up this new pipe as it is practically all one piece from stove to chimney, the elbows being connected in the same manner as the pipe.

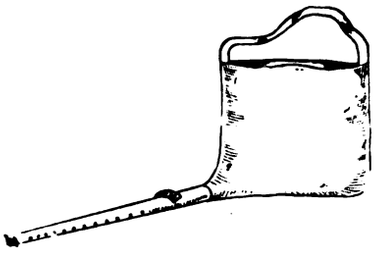
The "Tracy" Oil Filter.

The Phœnix Automatic Filter Co., of Racine, Wis., have brought out the "Tracy" Filter, illustration of which appears here. The makers say "that this Filter is built on an entirely new system. The filtering discs used in it translate the partly filtered oil from the storage chamber to the accumulator on the same principle as the oil passes from the reservoir of a lamp to the flame, the operation being analogous to distillation. The oil is therefore restored to its former condition, and the filter is also practically self-cleaning and is automatic in its regulation. The materials used in its construction are not affected by the action of ammonia, and the large storage capacity gives abundance of space for the perfect operation of the liquids." To operate the Filter pour in sufficient water, preferably soft water, to fill the casing to the height of the water mark on the casing back of the water gauge. Then pour in the oil to be filtered through the funnel at the top of the casing. The oil descends into the distributing chamber at the base of the filter, where the flow of the liquid is temporarily checked, precipitation taking place; it then passes through openings in the sides of the distributing chamber, giving it a rapid rotary motion in passing through the water, and in ascending to the surface of the water by specific gravity, the dirt and acid is partly thrown off from the oil by centrifugal force, and it then accumulates in the storage chamber, where further precipitation takes place; the lighter particles of the impurities constantly ascending in the direction of the overflow, and the heavier particles settling downward through the water in the direction of the wash cock. The oil gradually passes through the clarifying discs into the accumulator until it is filled; and as clean oil is drawn for use, the accumulator is constantly refilled by further clarification from the storage chamber.

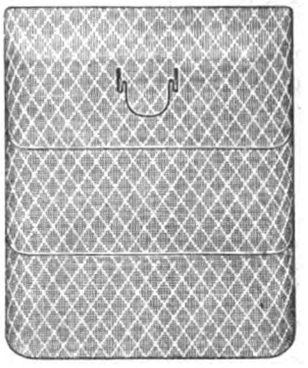


Improved Rat Killer.

J. R. Schuyler & Co., Bloomsburg, Pa., are introducing an improved Rat Killer as herewith shown. The features of the trap are its simplicity in setting, as by pulling up the spring it snaps in place ready for use; also that animals are not obliged to step on wood or iron when nibbling the bait. The light, skeleton-like appearance of the trap is referred to as assuring the animals of no danger, and the trap being made entirely of metal, it is stated, retains no odor of the killed ones. The trap folds up as in Fig. 2, and can be carried in the customer's pocket, and boxes nicely for shelf goods.

The O. K. Grass Seeder.

The Saginaw Hardware Co., Saginaw, Mich., are marketing a Grass Seeder as shown herewith. It consists of a bag to hold the seed, to be hung in front of the operator, to which is secured a tin tube 30 inches long. The seeder is provided with a dial gauge to enable the operator to sow accurately any number of quarts to the acre. At the end of the tube are teeth to distribute the seed as it comes from the seeder while along the tube are small holes for the seed to come through as it forces its way along the tube. The manufacturers say "that the seeder spreads the seeds a great distance, that it will sow perfectly wherever a man or horse can walk, and that it will sow a large number of acres per day."



Dow's Coil Door Spring.

The Dow Wire Works, Louisville, Ky., are placing upon the market the Coiled Door Spring here shown. It is intended for screen doors, and it is referred to as "far superior to a spring hinge, as when it gets weak it can be readjusted, while the spring hinge is nearly always used up in one season, or less." It is made of the best grade of spring steel wire and nicely japanned, and put up one dozen in a box with the necessary eyes to attach it. Prices and catalogues can be had by addressing as above.

Dow's Wire Spark Guards.

The Spark Guard here shown is one of a large line successfully made by the Dow Wire Works Co., Louisville, Ky. These are of various kinds and sizes, the details and prices of which will be furnished upon application. Their No. 5 is ⅞-inch diamond mesh, tinned wire, crimped; their No. 2 is 1¼-inch diamond mesh, coppered wire, crimped; their No. 4, ⅞-inch diamond mesh, tinned wire, crimped. These run in sizes from 16 to 24-inch. They are referred to as necessary to every grate, as there is no danger of children falling into the fire or ladies dresses burning when these guards are used. They also make a lined Spark Guard, either square top or round top. These are made without hooks, and are intended to set down on the hearth. They are make either tinned or coppered, as desired. The company also manufacture Wire Nursery Fenders which are set on the hearth and used before open fire-places and grates to keep children and ladies' dresses from the fire. Their catalogue of wire goods will be sent upon application.

The Chicago *Record* says: "There is a fair prospect that the early days of October will witness the resumption of business by the Hardware house of the Woodrough & Hanchett Co., Nos. 38 and 40 Lake Street, in the hands of a receiver since August 3rd. Arrangements for settlement have been made with all but two or three creditors."

The aluminum works at Lockwood's bridge, Eastchester, N. Y., which have $40,000 worth of machinery, are turning out daily three tons of aluminum.

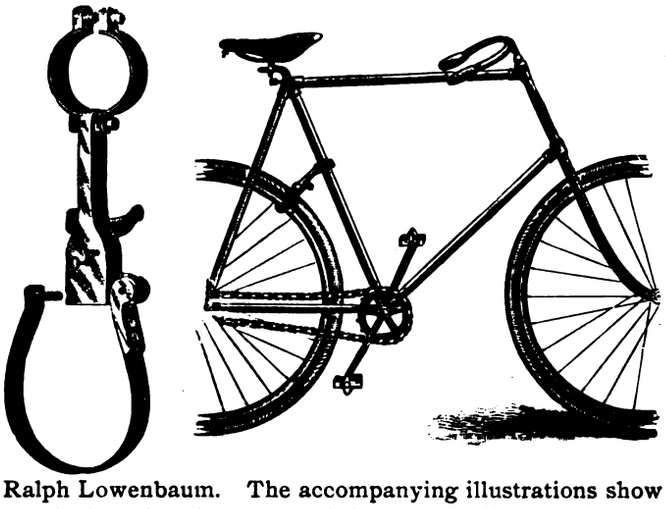
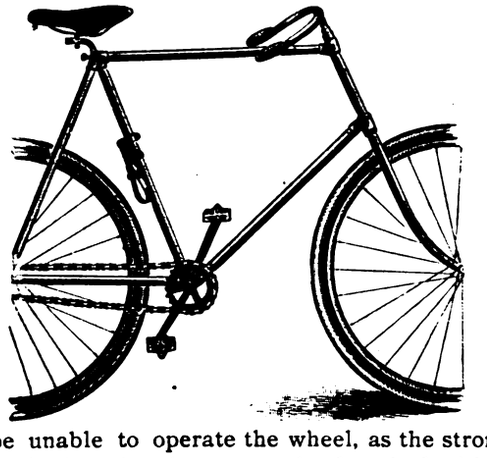
ILLUSTRATED BICYCLE NOVELTIES.



MANUFACTURERS and DEALERS are invited to make FREQUENT USE of these columns.

Anything NEW in BICYCLES or BICYCLE NOVELTIES should be sent us immediately. NO CHARGE, direct or indirect, is made, as our interest lies in SHOWING THE HARDWAREMAN what is going on in THE BICYCLING WORLD.



When your NOVELTY is ready, send us an Electrotype and descriptive matter, which will appear immediately.

The Ralph Cycle Lock.

The Ralph Cycle Lock Co., Nos. 801 and 802 Western Union Building, Chicago, Ill., are manufacturing and marketing the Ralph Cycle Lock, invented and patented by

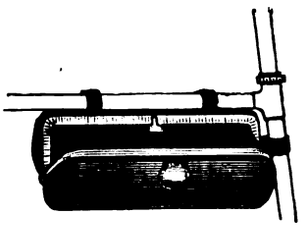
Ralph Lowenbaum. The accompanying illustrations show the lock reduced to one-third of the full size; also the method of locking and how the lock is attached to the wheel. The manufacturers say that "the special advantages of this lock is that it is at all times attached to the frame, thus obviating the necessity of carrying the lock in the pocket, where it is apt to be forgotten, or else become a burden." The lock is manufactured of aluminum, except the band for clasping the tire, which is made of strong steel spring. The key is only used for unlocking, as the lock fastens with a spring. The weight of the lock is but two ounces, and being of aluminum it does not tarnish. The lock can be either bolted or riveted to the bicycle frame, as desired. It will be observed that even if an intending thief should have time to unbolt the lock from the frame, he

would be unable to operate the wheel, as the strong steel spring encircling the tire cannot be detached without unlocking it or destroying the wheel. The locks are put up in neat boxes and are sold at a price that enables their being retailed at 75 cents.

Champion Tool Bags.

The Champion Mfg. Co., No. 424 Broome Street, New York, are placing on the market the Tool Bags for bicycles as here shown. The Gusset Bag, illustrated in Fig. 1, is made gusset shaped at the ends, similar in construction to the ends of a satchel or handbag. The advantages of the gusset bag claimed by the manufacturers are as follows: That it makes the bag air-tight, excluding dust and protects the tools from rusting, and that the shape of the gusset

FIG 1.



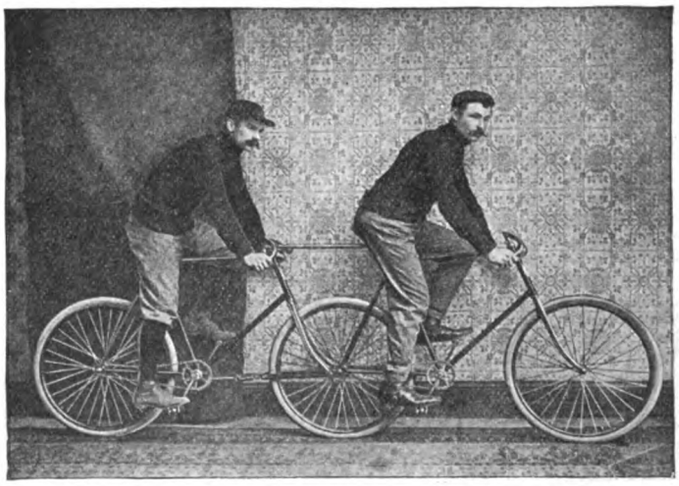


FIG. 2.

widens the lower part of the bag, forming a natural berth for the tools, preventing them shaking and rattling. The bag is furnished in black, colors and alligator, 2½ and 3 inches deep. The Frame Bag, Fig. 2, is seamless, and is provided with a japanned metal frame, to which straps for attaching it to the bicycle frame are fastened. A turnkey working in one part of the frame passes through an opening in another part of the frame and serves as a means for locking the bag. It is pointed out that the bag opens easily without touching the straps or buckles, and that it permits of easy access to the tools. The bag is made only in black, 2½ inches deep.

A Three-Wheeled Tandem.

M. Jakobson, No. 185 E. 79th Street, New York, has patented and is manufacturing a Three-Wheeled Tandem, representation of which appears here. Mr. Jakobson's invention is simply an attachment by which two persons desiring to take a spin together can readily make a tandem by joining their wheels. The front wheel of the rear bicycle is removed and its forks are attached to the hub of the rear wheel of the front bicycle. A steel rod makes a connection also on the level of the saddle. The rear section is equipped with a steering apparatus, thereby enabling the rear rider to assist the forward rider in making a short turn when required. The maker says, "by one of the attach-

ments you have the advantage of riding singly or in tandem as may be desired, and should an accident befall the wheel by replacing the forward wheel in the rear section of your tandem you have again a complete bicycle until the injured parts are repaired."

The Pathlight Cycle Lamp.

The Place & Terry Mfg. Co., No. 215 Centre Street, New York, are introducing the Pathlight Bicycle Lamp, illustra-

Digitized by Google

tions of which appear here. In Fig. 1 the lamp is shown ready to be mounted on a wheel. It has a round body with a large double convex photo-lens in front, and a small round ruby signal light on each side. For convenience in filling, the oil filler is on the outside. The lamp is designed

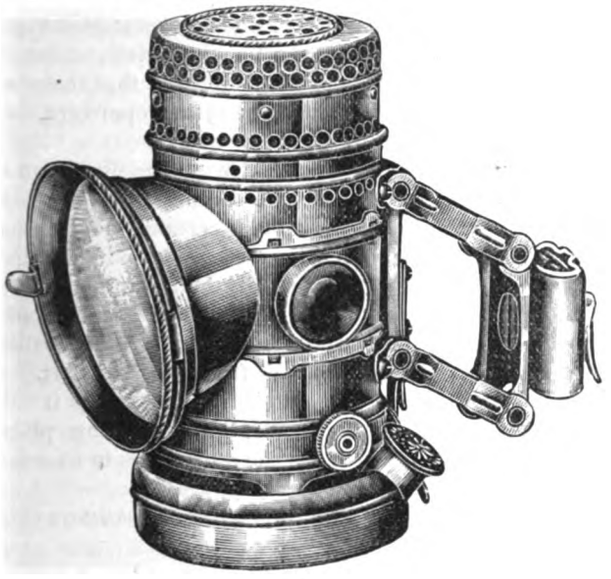

FIG. 1.

for burning kerosene only, although lard or any heavy oil may be used. In Fig. 2 a longitudinal sectional view is given showing the construction of the lamp. The top, as well as the oil reservoir (or fount), may be disconnected from the lamp body. The top is fastened to the body by a three-way bayonet lock, while the fount is held in place by a spring catch and pin. The burner is permanently fixed to the oil fount and is provided with oil "catchers" to prevent leakage or drip in case the lamp is heavily jolted or overturned. Around the burner is a ring holder or gallery, which is fastened to the fount by three legs to prevent the heat from passing down into the fount. Within this ring is a disk which has two circles of small openings which admit the air to the lamp body (below the burner) in horizontal jets, which serve to keep the lower part of the lamp cool, besides supplying the flame with air. The lower part

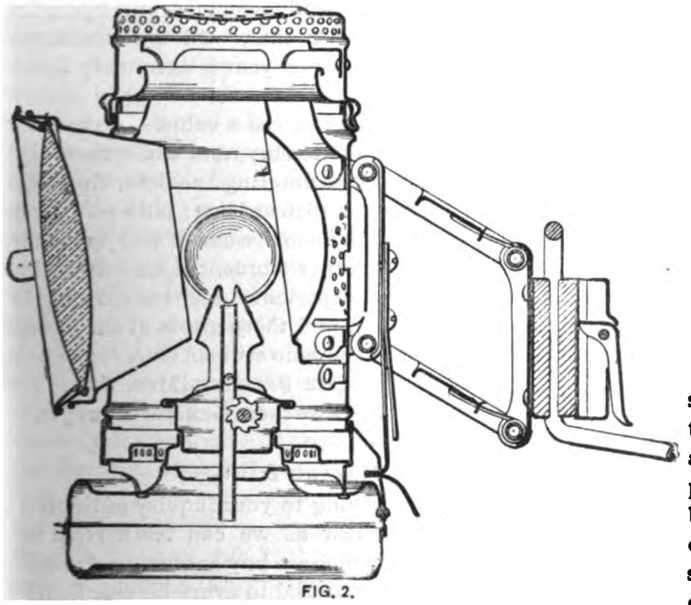

FIG. 2.

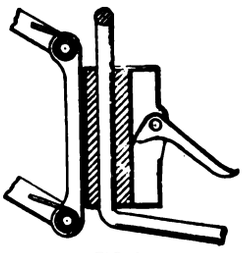
of this gallery ring is in form of a skirt to protect the openings in the disk from wind currents. Around the top of the lamp are two rows of cold air inlet holes, and two rows hot air outlet holes. The cold air inlet holes are protected on the inside by upward deflectors, so that the stronger the wind the greater the upward draft and brighter the flame inside the lamp. The hot air outlet holes are protected by a disk or deflector to prevent any air currents passing down to affect the flame. The manufacturers claim that it is absolutely impossible for any wind or gale (no matter how strong), to blow out this lamp. To provide against the flame being affected by jolting, two coil springs are inserted in the handle, one acting against the other. The reflector can be easily removed for polishing. The clamp to attach the lamp to the bicycle has within it a soft rubber lining, and a steel plate which is acted upon by a cam lever. In Fig 2 the clamp is shown attached to a bicycle's bracket, the cam lever being closed. In Fig. 3 the lever is shown open to admit the bracket easily. It is furnished in nickel, gilt or bronze, and weighs but 12 ounces.



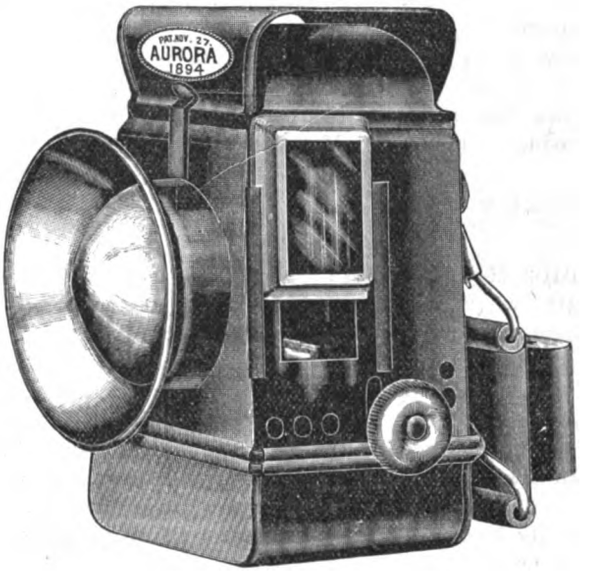


FIG. 3.

Aurora Bicycle Lamp.

The Anglo-American Cycle Fittings Co., Nos. 105–107 Chambers Street, New York, are introducing the Aurora Bicycle Lamp illustrated herewith. The lamp is 4½ inches in height, weighing 10½ ounces, finished, except the nickeled parts in black enamel japan. The top is hinged and the oil pot with burner takes out from the bottom. The burner is provided with a spring plate, pressing the wick closely to the ratchet wheels, to prevent the wick jarring down or changing position when in use. The front flange of the reflector and the frames of the side lights are of brass, nickel-plated and polished, the back reflector is of planished brass, silver-plated, and the parts of the back attachment are nickel-plated. The side lights are of ruby glass, one raising for lighting the lamp. It is explained that the interior of the lamp is so constructed that the draft does not act directly on the flame and that it is almost impossible to extinguish the light by any jar or by wind when the lamp is in use. This is accomplished, it is shown, by the air being received through perforations in the back and part of the

sides of the lamp body into the first or outer air partition; thence it travels upward and meeting the top, which forms a cap on the partitions, is forced down through the inner partition to the air chamber, formed by the oil pot and inner bottom, thence upward to the burning tube. The products of combustion pass out through the canopy top; thus a constant and uniform circulation and inlet of oxygen to assist combustion is secured. The lens is referred to as being what is termed a mechanically true parabola, which by its shape and focus collects and greatly intensifies the light. It is stated that as a result the flame cannot be seen at any point of vision, but only a bright illuminated disk. It is said that the lamp burns ten hours without refilling and that the wick will not char.

The National Nail Co., Paterson, N. J., incorporated. Stock, $500,000.

BICYCLE PROPHECIES FOR 1896.

WARWICK & STOCKTON CO.

Editor Hardware: We are in receipt of your favor of October 3d, and in reply would say we can give you no idea of the quantity of bicycles that will be manufactured next season. We think there is no danger yet of the industry being overdone. We do not think the machinery can be built in time to overdo it for the year of 1896. We, ourselves are working twenty-three hours per day at present, and shall continue to do so until June 1st, and are putting in machinery as fast as we can get it from Pratt & Whitney Co., Garvin Machine Co. and Lodge & Davis Machine Tool Co. We shall make for the trade upwards of 75,000 pairs Gem Hubs before the first of June. This will give you some idea of the business for 1896. We think the Hardware dealers will be the future distributers of cycles.

Yours truly,

Newark, N. J., October 4, 1895. Warwick & Stockton Co.

E. C. STEARNS & CO.

Editor Hardware: In answer to your favor of the 3d:

First: We estimate the production of bicycles in the United States for the season of 1896 to be at least one million.

Second: Probably seven hundred and fifty thousand were manufactured in 1895. Probably one-half of these were marketed by the Hardware trade, either wholesale or retail.

Third: We expect to see no change in prices next season. In our judgment the manufacture of bicycles is not being overdone at present, nor do we think it will be for the next year or two at least. Of course it is impossible to forecast the future.

Allow us to say in conclusion that bicycles are legitimately within the lines covered by the Hardware trade, and the interest of Hardware dealers in them seems to be increasing each year. Very truly yours,

E. C. Stearns & Co.

Syracuse, N. Y., October 5, 1895. H. E. Maslin.

HUNT MFG. CO.

Editor Hardware: In reply to your esteemed favor of the 4th, we would answer your inquiries as follows: We estimate that there will be manufactured in the United States during 1896 at least one million bicycles. During 1895 we are of the opinion that between five hundred thousand and six hundred thousand wheels were made.

We have no basis for an opinion as to how many wheels the Hardware trade marketed during the past season, but we should think that the Hardware trade must have undoubtedly been a considerable factor in disposing of the bicycle product.

We do not believe that the prices of bicycles in general will be changed from those of the past season, nor do we consider that the business is as yet being overdone.

Yours very truly,

Hunt Mfg. Co.

Westboro, Mass., October 7, 1895. C. B. Tewksbury, Secretary.

SNELL CYCLE FITTINGS CO.

Editor Hardware: Replying to your inquiry of 3d inst. would say that an opinion or an estimate as to the entire number of bicycles manufactured in America during the past year, would of necessity be somewhat of a guess. The number of makers in many small towns are very numerous, and we shall base our estimate on the number of standard makers, that is bicycles manufactured by reputable concerns.

As near as we can conservatively estimate it, we should say that there were at least 500,000 bicycles manufactured during the season of 1895. As to your inquiry about the number to be made in 1896, we should say that there will probably be an increase of at least 25 to 40 per cent. over 1895.

As to your third question, relative to the number marketed by the Hardware trade, we can hardly base an estimate, but the Hardwaremen have certainly become an important distributing source for the bicycle manufacturers and every year they will undoubtedly be more in evidence.

As to prices, there cannot well be a decrease as labor is higher and some of the material has advanced. We believe there will be no change in prices from those of 1895. As regards the general demand, our order book shows it to be very much on the increase, as orders are being placed earlier and in every department the quantity is in excess of 1895. Very respectfully yours,

Toledo, Ohio, October 5, 1895. The Snell Cycle Fittings Co.

PEERLESS MFG. CO.

Editor Hardware: It is extremely difficult for us to answer the first three questions in your favor of the 3d inst. Any expression of opinion as to the number of bicycles, either manufactured in 1895 or to be made during the coming season, must of necessity be merely an estimate. The general opinion seems to be that there were about 300,000 turned out during the past season, and that from 500,000 to 600,000 would be a fair estimate for 1896. As to the number marketed by the Hardware trade, we are entirely without any figures whatever which would guide us in a statement of this sort.

The prices of bicycles for the coming year will, we think, be higher; that is to say there will be a tendency on the part of manufacturers not only to maintain the prices on high grade wheels, but also to put upon the market a wheel with more attention given to detail, which will list at about $125; although there are, undoubtedly, going to be a great many cheap and medium priced machines put upon the market, and good machines at that. On the whole, we think the outlook for the coming year is extremely favorable.

The bicycle has established itself as a vehicle of practical utility and as such, has come to stay, and while there will be any a great m new makers entering the field, they will not cut much of a figure for 1896 at least; later on it may be different, and the time may come when it will be a case of survival of the fittest; in other words, the bicycle maker who has had the greatest experience, has turned out the best goods and has manufactured those goods at the closest margin to cost, will be the one who will survive.

The Peerless Mfg. Co.

H. Crowther, General Manager.

Cleveland, Ohio, October 5, 1895.

Rouse, Hazard & Co.

Editor Hardware: Replying to your inquiry of September 17th, will say that as near as we can learn from the bicycle material house, of which we buy our material, which house supplies more or less material to every bicycle factory in the United States, material has been purchased to complete 900,000 or perhaps 1,000,000 bicycles for 1896 in America.

From the same source we understand that the number of machines manufactured in America this year was from 500,000 to 550,000.

We can only make a rough guess as to the proportion of these machines that were marketed by the Hardware trade during the past year. We would say, however, that prob-

Digitized by Google

ably one-third of the entire quantity was sold in this manner. In this guess we may be very wide of the mark, however, as the proportion may have been nearer one-quarter or one-half than one-third.

Owing to the fact that everything entering into the construction of bicycles has advanced very materially we think there is no probability of prices being lower in '96, unless the business is largely overdone, and of this we are very fearful. While there will be a much larger demand for bicycles next year than this, we are afraid that there will not be a sufficient demand to absorb one million bicycles. While it may be true that it will be impossible to get material with which to complete one million bicycles in time for the best selling season, we think it probable that every maker will get so much material of various kinds that he will be compelled, in order to save himself, to take the remaining material when he can get it, even though it be very late, when it is possible that a large number of machines will be thrown upon the market at a time when the trade is practically over, in which case a very great demoralization, similar to that experienced in '93, when large quantities of bicycles were auctioned off, will inevitably result.

Over-production means a demoralization of the trade and loss to makers and dealers alike. If you can do anything to make makers realize the danger which over-production means for 1896, we will be very glad. A large proportion of the makers now in the business are planning to double their output for next year, while many new concerns, who are going into the business, who have never sold a wheel, are buying material and planning to build quantities of bicycles, which it has taken the old concerns years to develop a market for. As for ourselves we have bought material such as to increase our quantity 50 per cent. only although our agents all seem to think that their trade will be double that of 1895.

Very truly,

ROUSE, HAZARD & CO.

Peoria, Ill., September 20, 1895. H. G. ROUSE.

BIDDLE HARDWARE CO.

EDITOR HARDWARE: In answer to your esteemed letter asking for information on bicycles, we fear that you have made a mistake in taking us for prophets, and we hasten to assure you that we are far from claiming that the prophet's mantle has fallen on our shoulders, and our modesty in this respect prevents us from expressing an opinion as to the number of bicycles which may be manufactured next year.

As to the number produced in 1895, we can only say that like the heathen Chinee, the bicycle business is "peculiar' as we do not know of any business in which so many misstatements and exaggerations are rife. We have heard well informed bicycle manufacturers estimate the number made in 1895 as 250,000, and we have heard other estimates from men who are more or less informed, who place the number at 450,000, and when such a wide diversion of views exists, we would not care to express an opinion. We think, however, that there is a popular exaggeration as to the size of the bicycle business. The air is full of talk of orders for 100, 250, 500, 1000 and even 5000 wheels, and people seem to forget that bicycles are not sold by the gross or even by the dozen, and the average dealer purchases one, two or three at a time, and in this way it takes a great many to make a hundred; and because a retailer places an order for 100 early in the season, it is no guarantee that he will sell that quantity or even expects to do so.

The bicycle business is a big business, beyond doubt, and our own sales in this line have been most gratifying, but we cannot help applying a Hardware discount to nine-tenths of the stories that are floating around, and it would be better for the bicycle business if a more conservative view was taken.

Next as to prices. From all we can learn there is no prospect of prices being lower next year. Material has advanced, labor is demanding higher wages, and when a first-class bicycle can be retailed as low as $75 or $80, we do not see how any further reduction is possible with the market in this present advancing state. We are strongly of the opinion, however, that the day for $100 bicycles has gone by. Of course, there are people who will not be satisfied unless they pay a fancy price, but we are firmly of the opinion that a thoroughly good and serviceable bicycle which will give equal satisfaction to any made, can be purchased for considerably less than $100.

Now as to your question as to whether the bicycle business can be overdone. We can only say that in these days of machinery, there is nothing to prevent any business from being overdone. A hundred years ago shortage in any line was always possible, as labor was entirely performed by hand, and the output could not be increased beyond a certain level. To-day the possibilities of machinery are endless. Machinery can be built in a month which will do the work of a hundred men for a year, and it is no longer a question of permanent shortage in anything that is manufactured. Of course, there may be a temporary shortage, as in this year; we may have a somewhat similar shortage next year, as bicycle machinery cannot be built nor material obtained in a day or even in a month, but in the long run the possibilities of machinery will effectually prevent shortage in bicycles or in any other manufactured goods.

Manufacturers who attempt to put new machines on the market next year will probably be forced to use inferior material, and we think it will be a risky thing to buy machines for 1896 which are not made by recognized manufacturers, who have been in the market for some years. We think, however, that those who are handling standard make, may expect a good trade next year. It must be remembered that we have been fifteen years or more supplying the men of the country with bicycles, and there are still a large amount of them not supplied. We have only been about two years supplying women with bicycles, and the demand for ladies' machines will apparently be very heavy.

Respectfully yours,

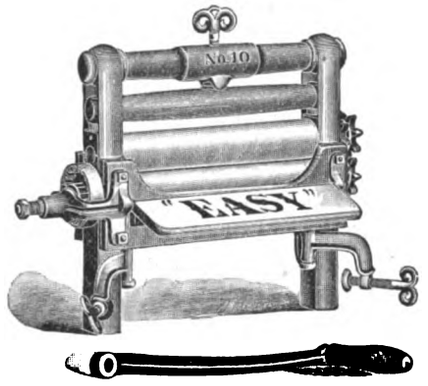
Philadelphia, October, 1895. BIDDLE HARDWARE CO.

ROYAL CYCLE WORKS.

EDITOR HARDWARE: We have your letter of October 3d and have carefully read the contents. We have noticed for some considerable time that your journal was paying considerable attention to the bicycle business. We, ourselves, favor very much the Hardware people taking up the sale of bicycles. In fact, we are devoting our attention chiefly to this idea. Replying to your questions, we would that it is a matter of doubt as to the number of bicycles that will be made in 1896. From all appearances we would say that there will be at least half a million bicycles made. We certainly do not think that there can be many more than that number, owing to the fact that material for bicycle manufacture is scarce and very hard at times to obtain. We should say that there must have been 350,000 bicycles made in 1895, although it is a very difficult matter for any one to get exact estimates owing to the fact that manufacturers of bicycles like to give the impression that they are making more than they really are. We, ourselves, made 2500 wheels. The prices for high grade wheels are very firm, the $100 limit will be upheld by every maker of high grade wheels. In fact we, ourselves, have decided that that will be our price.

We do not think there is any possibility of trade being overdone for some considerable time. The demand for wheels is very great, and had we been in a position to make 20,000 bicycles during the past season, we could have sold every one of them.

We have done but little missionary work in the way of marketing our product for 1896, but for your especial notice would say that we have very few more to sell, and we are fixed so that if we are kept regularly supplied with material



Digitized by Google

we can manufacture from 6000 to 7000 bicycles. We have arranged agencies with J. M. Warren & Co., Troy, N. Y., who are Hardware dealers; Hamilton & Matthews, Rochester, N. Y.; the Hobbs Hardware Co., of London, Ontario; the Lockwood-Taylor Hardware Co., Cleveland, Ohio, and a host of other Hardware dealers smaller than the people we name. We think that if the bicycle business in the future is handled more extensively by the Hardware trade, it will be better for them and better for bicycle manufacturers.

Marshall, Mich., October 16, 1895. Royal Cycle Works.
H. Chapman.

Easy Clothes Wringer.

The Blair Mfg. Co., Springfield, Mass., are placing upon the market the attractive new Easy Clothes Wringer shown in this connection. It will be seen to have crescent-shaped steel uprights, U shaped at the top, which enables it to "sustain all the pressure strain of the Wringer when in use, while the concave shape of the uprights in section serve as bearings in which the rubber roll journals run. The internal purchase gear keyed to the lower roll imparts more than

double power to the crank, and the crank bracket is made of cast steel and bolted to the frame from two sides, making an exceedingly strong and rigid construction. The frame is a combination of wood and metal, giving the advantages of both, the wood for contact with the clothes and the metal for strength; all metal parts are heavily galvanized, including the bolts, and the rolls are made of best white rubber, vulcanized to the shafts." The manufacturers add that the Wringer possesses unique design, ease of operation, simplicity and durability.

The Gardner Sash Lock.

The Gardner Sash Balance Co., Chicago, Ill., have recently placed upon the market the Gardner Sash Lock herewith illustrated. The latch and keeper are made of cold rolled steel, by which process a greater strength and finer finish are obtained than can be secured by the use of cast iron. The manufacturers contend that the new device is burglar-

proof, and they further assert that it cannot be opened from the outside. It draws both sashes together evenly and securely. Being made of cold rolled steel, it is of handsome finish and practically indestructible. These locks are neatly packed in a box with screws to match, and are furnished in all the popular finishes.

Latest Trade Publications.

We have recently received the new catalogue and price list issued by the Prentiss Vise Co., No. 44 Barclay Street, New York. The company say: "In presenting this catalogue, we desire to invite special attention to the several new sizes and styles of vises shown, all of which are fully equal to the high standard of excellence we have maintained for our goods for twenty years." The new goods referred to above are found on pages 14, 22, 23, 26, 27, 30 and 31 of the catalogue. The Prentiss solid jaw jewellers' vises, described on page 14, are provided with a new solid jaw, and have a stationary bottom, or patent swivel bottom, with anvil. The manufacturers say: "In addition to our regular lines of long and favorably known Prentiss' patent jewellers' and watchmakers' vises, we now offer these new implements in which the special features are solid back (instead of 'self-adjusting jaw'), and the lowest price consistent with our high standard of excellence, which is fully maintained." On pages 22 and 23 are the machinists' "Bull Dog" vises. These are parallel vises, with solid jaws and either stationary or swivel bottoms. The Prentiss' new steel (channel) bar filers' vises are illustrated on pages 26 and 27. These vises have stationary or swivel bottoms. In referring to them, the makers say: "Unlike all other so-called 'steel arm vises,' the Prentiss is absolutely as inflexible and rigid as though made with cast iron slide, thus insuring the user a parallel vise that will not spring nor break. The nut is fastened in the centre of vise body, giving a maximum grip with minimum friction and strain. Our wrought steel (channel) gliding bar renders it possible to construct this vise with the highest jaws and largest throat opening of any vise ever before offered, thus holding the largest and most complicated work, being particularly adapted to bicycle manufacturing and repair shops. Rough-cut or smooth jaws, as ordered." On pages 30 and 31 are found the Prentiss improved combination pipe vise and the Prentiss new open side pipe vise. Speaking of these vises the company say: "Our pipe vise, as first constructed, has been in constant use during the last five years in the largest pipe establishments requiring such tools, and has given unqualified satisfaction. We now offer it with our latest improvement, 'the wrought steel (channel) sliding bar,' which makes it unbreakable and superior to all others. The 'grip plates' are made of best steel, carefully tempered, and are deeply serrated at right angles, forming innumerable points. These heavy steel plate pipe jaws are reversible and interchangeable, and are full width of vise, thereby giving greater holding contact, with much less pressure on the pipe than with old style concave jaws. Pipe may be held at various angles and a slight turn of lever release it. Capacity greater than other vises. In presenting our new open slide pipe vise, which is constructed on an entirely new plan, we claim it to be the most complete, simple and strongest pipe vise in use, and also that it will hold pipe firmly with much less pressure than any other vise, thereby overcoming danger of crushing the pipe. It can be used on bench or post, and will hold pipe in any position, requiring but half the space necessary for other vises."

"We Pay the Freight on What You Want" is the greeting given by the Standard Fiber-Ware Co., Mankato, Mi n., in their '95 catalogue. The company say: "Nearly ten years ago we began to manufacture fiber-ware with a quite large plant, but with small knowledge. Since then we have added much to the former, and greatly multiplied the latter. Our present combined plant, with the exception of a large warehouse, is fairly well shown on the back page of cover. A very short time sufficed to prove that 'a little knowledge is a dangerous thing.' A very long time was needed to acquire the knowledge and skill we should have started with. 'Experience is a dear school;' but we took

Digitized by Google

a full course, and have not fooled away our time playing marbles. We have learned that long tough fiber, like flax, is desirable; that wound and dressed fiber goods are stronger and more elastic than moulded; that, when the shapes of fiber vessels are such that they cannot be drawn or pressed into form like sheet metal, the bottom should be immovably fastened to the vessel so it cannot warp out or loosen; that pails for common use should have all edges protected by metal; that just the right materials in just the right proportions must be united under proper conditions in the water-proofing process, so as to combine chemically with the fiber, with such subsequent treatment as to indurate the ware by oxidation throughout, so that it shall be practically equal to vitrified ware without its fragility. Standard Fiber-Ware, made as we have just described, we now offer to the trade in our ebony enameled ware, and, to better suit all tastes, other colors are laid upon the same finish. Not only do we offer ware 100 per cent. better than formerly, but we have reduced prices 25 to 50 per cent., and we pay the freight on lots of a hundred pounds or more, the rates not exceeding $1.30 per 100 pounds." The catalogue fully illustrates all the goods, for which the company is so justly famous.

The Smith & Egge Mfg. Co., Bridgeport, Conn., in their 1895 catalogue, say: "We take pleasure in presenting you with our 1895 catalogue, illustrating our sash chains, cable chains, padlocks, etc., etc. Being the pioneers in the manufacture of sash chains by automatic machinery, we claim to be able to serve our customers with the finest chains of all grades that are offered in the market. The use of automatic machinery precludes the use of inferior metal, and nearly twenty years successful use of our chains in the most prominent public buildings throughout the country, attest to their good and uniform quality. Our line of padlocks is varied and adapted to all uses where strength and security are desirable. We have a large and well equipped factory, with especial facilities for the manufacture of sheet metal novelties, models, experimental work and automatic machinery of all kinds. We also make a full line of plumbers' chains, pipe straps and other specialties. All orders and inquiries will receive prompt and careful attention." In the back of the catalogue is a list of prominent buildings in which the goods manufactured by the Smith & Egge Mfg. Co. are used with successful and satisfactory results. It is as follows: Metropolitan Opera House, Produce Exchange, Murray Hill Hotel, Methodist Book Concern, Stewart Building, Waldorf Hotel, Holland House, the World, Boreel, Potter, Times, Equitable Buildings, New York; Connecticut National Bank, Bridgeport; U. S. Court House and P. O., Harrisburg; U. S. Court House and P. O., Philadelphia; U. S. Court House and P. O., Grand Rapids; Post Office, Bridgeport; Post Office, Philadelphia; Post Office, Little Rock; Post Office, Louisville; Post Office, Washington; Post Office, Nashville; Post Office, St. Louis; Post Office, Atlanta, and others. The catalogue is full of valuable information concerning a first-class house, and will be useful in the hands of every dealer. It will be sent upon application.

"We Make Cutters" is the title of a fancy little leaflet just issued by the L. S. Starrett Co., Athol, Mass. A note inside says: "Our Cutter Department is under the personal supervision of Mr. F. J. Gay, a member of our firm, who, through his former business experience in Providence, R. I., is well and favorably known to a large proportion of the consumers of cutters. His twelve years of cutter making in all its branches and details, combined with the facilities now at his disposal—experienced assistants, and a large and well lighted factory, equipped with the highest class of standard and special machinery and tools—guarantee to our customers first-class cutters."

Review of the Markets.

Hardware: The market is in a normal condition, the only matter for complaint being the tendency of the jobbers to cut manufacturers' prices and sell at unnecessarily low figures. The tendency to speculate in goods, anticipating advances, has ceased to a large extent, and business is on more legitimate lines. New discount sheets are still appearing, but not so frequently, one on Wire Goods being about the latest. Collections are somewhat hard, but the general condition of affairs is satisfactory.

Cutlery: The Cutlery market is in a satisfactory condition, being much better east of Ohio than further west.

Wire Goods: The Wire Goods Co., Worcester, Mass., under date of October, 1895, issue a new discount sheet.

Nails: The Canadian manufacturers of Wire Nails have formed a combine which regulates the output of the factories and imposes conditions more exacting than our own combine. It is understood that the Canadian association is in sympathy with the American combine, and that they thoroughly understand each other.

Wire Nails: A better movement in Wire Nails is reported than for some time past. Prices are the same and change seems unlikely. We quote as follows: Carload lots or mixed cars, $2.25 per keg, base, f.o.b., Pittsburg; less than carload lots, $2.35 per keg, base, f.o.b., Pittsburg. To jobbers taking from one mill within one calendar month 1000 kegs and over, 5 cents per keg rebate will be made. On contracts direct shipments of less than carlots of 24,000 pounds of Nails an extra 5 cents per 100 pounds will be charged. Wire Nails in carload lots on dock in New York are quoted at $2.40, and small lots from store are held at $2.50.

Cut Nails: There is nothing new to report in reference to Cut Nails. Prices are as follows: Carload lots or over, $2, base, Pittsburg delivery; less than carload lots, $2.05, base, Pittsburg delivery. To jobbers taking from one mill within one calendar month 500 kegs or over, 2½ cents rebate per keg is allowed, and on 1000 kegs 5 cents rebate per keg is made. For half kegs 10 cents extra will be charged. New York quotations are as follows: Carload lots on dock. $2.15; small lots on dock, $2.26, and small lots out of store, $2.30.

Tacks: There is a fair trade in Tacks. The rumored change in the list has not taken place.

Nuts and Bolts: The principal topic of discussion among Nut and Bolt manufacturers seems to be the competition of convict labor. When the business depression came on the wages of the Nut and Bolt workers were reduced. The contractors who employed convict labor likewise lowered wages. Since the revival of business the Nut and Bolt manufacturers have raised wages to the old standard, while the wages of convict labor remain the same. This, of course, enables the contractor of convict labor to undersell the manufacturers, and if something is not done shortly to remedy the evil, must result in a reduction of wages all around.

The prices quoted below are for small lots. Round lots, except Tobin Bronze, can be purchased at lower prices:

Copper.

Screws: The price of Screws has been advanced by the manufacturers. The discounts announced are as follows:

Flat Head Iron	82½%
Round Head Iron	75%
Flat Head Brass	82½%
Round Head Brass	75%
Flat Head Bronze Metal	80%
Round Head Bronze Metal	75%

For Flat Head Iron Screws, Blued, 5% will be added to net amount of invoice.

Putty: Prices remain unchanged and are as follows: $1.40@$2.25 as to style of packing and quality.

Glass: Prices of both American and French window have been advanced.

Linseed Oil: The following quotations govern the New York market: Raw, 44 cents per gallon; boiled, 47 cents per gallon; Calcutta raw, 48 cents per gallon.

The following quotations are made by the National Lead Co.: White Lead, dry or in oil, and Red Lead and Litharge in kegs. In lots of less than 500 pounds, 6 cents net; in lots of 500 pounds and over, 5½ cents; Red Lead and Litharge in barrels and half barrels, ¼ cent per pound less than price in kegs.

The Russell & Erwin Mfg. Co., New Britain, Conn., and the Charles Parker Co., Meriden, Conn., under date of October 9th, issue discount sheets giving the advance prices of Screws made by the manufacturers and appearing elsewhere in this issue, and also discounts and list prices on stove bolts, tire bolts, wire nails and screws which they produce.

The Withington & Cooley Mfg. Co., Jackson, Mich., manufacturers of Farm and Garden Tools, under date of October 10th, make a withdrawal of quotations, as follows: "Our quotations on Steel goods have been made good only for a limited period. To avoid any misunderstanding, however, we hereby distinctly withdraw all quotations on Steel and Malleable goods and announce that our product for 1895-'96 is so nearly sold we cannot enter any more large general orders for steel goods at any price. For such kinds as we can still undertake to furnish we will name prices as occasion comes."

Landers, Frary & Clark, New Britain, Conn., publish the following discounts in connection with their catalogue. The terms are 60 days, with 2 per cent. discount for cash in 10 days:

Clapp & Co., bankers and brokers, New York, in their letter, say: "The dear old unequal, inconsequent, patriotic, public is again asserting its clear vision of American destiny. In municipal and State conventions the men who convert conviction into action are shaping the machinery of government to fit the hour's need. A tidal wave of snowy ballots may confirm the sound financial policies so long hidden by unfortunate administration. The President of Argentine Republic is urging the funding of the public debt into 4 per cent. gold bonds. United Kingdom revenue returns show gain of about $18,295,000 in last three months, indicating business improvement. The custom receipts of the port of New York in last three months, ending October 1st, were $30,896,817 against $24,736,266 year ago same time. There is outstanding $1,092,962,663 paper money, $44,466,000 is in $1 bills, $25,500,000 in $2 bills, $251,662,000 in $5 bills, $287,598,000 in $10 bills, $223,697,000 in $20 bills, $37,005,000 in $50 bills, $76,882,000 in $100 bills, $13,265,000 in $500 bills, $104,125,500 in $1000 bills, $7,070,000 in $5000 bills, and $17,666,000 in $10,000 bills. The total of all our money in circulation is $1,585,593,509."

THE ROCHESTER TRADE.

We can report quite an improved condition of trade in this locality since our last, it being an agricultural country tributary to our market, and farmers being busy harvesting their crops. Local merchants report quite an unsatisfactory condition of trade, as farmers are too busy to think of buying Hardware. Collections are unsatisfactory, but prices are being well maintained, and we are looking forward, hoping to see brighter times.

WEAVER, PALMER & RICHMOND.

THE OMAHA TRADE.

The volume of business in this section, while hardly up to the expectations we had formed several months ago, is nevertheless a fair average, and considerably in excess of the corresponding period of a year ago. The seasonable weather of the past four weeks has made a large demand

Digitized by Google

for fall goods, notably in the line of Coal Hods, Elbows, Stove Pipe, Huskers, Baling Wire, etc., but business is necessarily retarded by the exceptionally low prices ruling on grain, which refuses to leave the farmers' hands at the present values, and makes the movement of merchandise slower than it would be under more favorable circumstances, and collections somewhat below the average.

Rector & Wilhelmy Co.

THE PITTSBURG TRADE.

The Hardware jobbing trade is not so active as was anticipated earlier in the season. The rapid recovery from the depression of 1894 struck too rapid a pace last spring, and has had to slacken up a little. There are still good orders in the hands of our mills to keep them busy for some time, and the distribution of money for labor employed throughout this section will eventually find its way into the hands of the tillers of the soil and the retailer. The process is slower than we could wish, but will be completed in time and then the retail merchant will be in better condition, both for buying and paying.

We believe the present reaction is temporary, and that early in 1896 a good steady business will be done.

The extreme dry weather for months past has dried up the smaller streams of this locality, and while it is a great inconvenience to farmers, it gives the engineers of our proposed canal to Lake Erie a good opportunity to show what effect such a season will have upon this enterprise. They report that under their plans there will be abundance of water to supply the canal.

We are looking forward with pleasure to the annual meeting of the National Hardware Jobbers Association to take place in our city next month. This Association has in its one year of existence done a great deal to improve matters, and we expect a great interest will be taken in this meeting, and that it will be largely attended.

Logan, Gregg & Co.

THE MINNEAPOLIS TRADE.

A little improvement in general business; jobbing houses all very busy. We will all feel the effect here later on. The farmers complain about prices on their products, wheat, grain, oats and all kinds of vegetables being exceedingly low, while they are probably getting more net per acre than they have for the past five years at least. Railroads are having all they can possibly do to move the crop; considerable complaint about the scarcity of cars. There are a very large number of country elevators being built all through the Northwest, which means that a large quantity of grain will be stored and held back for higher prices. The advances on goods in the Hardware line are fairly well maintained.

W. K. Morison & Co.

THE CHARLESTON TRADE.

Hardware is still in demand, and daily orders are conclusive evidence that consumers are not yet supplied. Early shipments were composed almost entirely of goods then or soon to be actually needed, and merchants were not only extremely cautious, but many absolutely refused to purchase goods that were not necessary for their customers to harvest their crops and prepare them for market. Few were exempt from large ledger balances and none felt that, until these were reduced, any temptation to increase should be offered to customers who already owed larger sums than were either safe or desirable. As the crop was harvested and the money producing cotton was turned into cash, these balances were perceptibly reduced and interior merchants decided that other than mere necessaries could be safely added to their stocks.

We now have an unusually fine trade in guns, ammunition and sporting implements, while the demand for cutlery, both pocket and table, is for the finer rather than the medium grades that were selected in the beginning of the season.

There has been a very general planting of small patches of sugar cane, and this has created a demand for mills, boilers and evaporators. We have repeated enquiry for all the most improved machinery, and any really meritorious agricultural implements will be early sought by intelligent and progressive farmers.

The holiday season is now near and advance purchases to meet the demand are already made. As strange as it may seem, we are already beginning our spring business, and have large orders booked for early shipment. Judging from the style of orders and quantities, interior merchants are aware of the total annihilation of farming implements resulting from the forced economy of the two past years, and are preparing to refurnish all the farms dependent upon them for supplies, with entirely new outfits. We are perfectly satisfied with trade up to present writing, and see no reason why we should not have all of our hopes realized as the year advances and even to its close.

It is very gratifying to note how careful and thoughtful manufacturers have been and still are in making advances. We have assurance from several that orders now being filled, being taken of course some time since, are entirely devoid of profit, if not entailing an actual loss. This of course will not and cannot continue, and the announcements of advances are already received, but the percentage is moderate and entirely acceptable.

The especially mild and long-continued fall has enabled all classes to continue work without interruption, and the unusually large demand for goods of all kinds has been met without serious inconvenience or delay. We hope, but cannot depend upon this condition so pleasant now to continue, for our experience in the past has been that the sudden climatic changes, now an expectant and always occurring incident of our winters, will block navigation and seriously interfere with land transportation, and vexatious but unavoidable delays in delivery of goods occur. For this reason we solicit spring orders and early shipment many months in advance of the actual needs of consumers.

Collections are considerably above the average, and merchants are meeting their fall notes more promptly, so while we reap considerably of the past we are enjoying the prosperous present, and are thankful the commercial horizon is clear and no threatened storm either predicted or expected.

Marshall, Wescoat & Co.

THE DAVENPORT TRADE.

Wooden Ware has just advanced another ten per cent. Wood Screws have taken twice that jump and still are not content. Potatoes, oats and all the grain our farmers have to sell, are falling still like summer rain to where we cannot tell. Our trade continues dull and slow. Corn harvest has begun, Nails are so high they will not go, no building being done. The weather is perfect, crisp and fair; collections hard to make; the prices that went high in air are ready now to break. The oldest Hardware firms in trade, with knowledge they possess, can't understand past changes made or as futures give a guess; for schemes that have worked well for years, old methods always good, are out of date it now appears, don't pan out as they should. The margins still continue small, expense accounts are high, there'll be no profit by and by, then you'll hear something—drop.

Sickels, Preston & Nutting Co.

THE ST. PAUL TRADE.

The fall business in the Northwest so far has been somewhat disappointing, although within the last few days a change for the better has taken place. The crops of wheat, oats, barley, corn, potatoes and in fact of everything raised in this part of the country were never larger than this year.

The stock of merchandise in the hands of retailers on the first of August was generally small. During the month

Digitized by Google

of August they began to prepare for the business they hoped to get, basing their hopes upon the large crops already in sight, and although not extravagant in giving their orders the business made a very handsome aggregate. Before they had time to dispose of these goods, prices of most farm products had materially declined. The farmer since then has had favorable weather for doing his fall work. He has no incentive to market his crops, and consequently he stays at home attending to his plowing and other work instead of hauling and selling his crop, paying his old bills and making fresh purchases. Of course, some selling took place; in fact, enough to give the railroads a good business, and perhaps, all things considered, it was better this way than any other, as with the immense crop if there had been the usual desire to turn it, elevators and railroads would have fallen far short in their capacity to accommodate the demand. The promise now is that November and December will be very active months with a satisfying business. Collections are good, all things considered.

C. W. HACKETT HARDWARE CO.

THE COLUMBUS TRADE.

We are glad to report that trade is active; in fact, it has been so through the year, with the exception of the last two weeks in July. Seasonable goods are in good demand and prices fairly well maintained.

We regret to see the disposition on the part of some jobbers to begin booking orders for screen goods for 1896 at the same old ruinous prices. Why jobbers are so anxious to secure orders at the prices we find some are quoting is a mystery to us. In a conversation with our salesmen on the subject, the writer expressed the wish that all the Wire Cloth would be sold before January 1st, '96, for in that event we would not have to sell any. This may sound unbusinesslike; if any jobber can show that he is any better off by selling the goods at such prices, unless there is an order for other goods in sight, we will open a keg of nails or something else for him the first opportunity we have.

The worst feature in business at present is poor collections. Farmers in this section had but little hay or wheat; consequently, they are hard up, and as pay day with them only comes when they sell grain or stock, the merchants must now wait for corn and hogs, and with corn at only 23 cents per bushel, even with the big crop, the question is, Will it go around? We fear it will not.

We have noticed during the rapid advances in goods that our customers seem to have better memories. While goods were declining they oftentimes forgot about placing orders; and when you called their attention to a contract, would say they forgot all about it and bought some from some one else, of course, at the lower prices, but now with the shoe on the other foot, it is very different. If you happen to be short anything on an order and it advances, they will think of it a month later and say they are in urgent need of it. May be they will return the favor later on.

SMITH BROS. HARDWARE CO.

THE BALTIMORE TRADE.

Business continues along the same line of improvement as noted in our last letter. Orders are numerous, fair in quantities and assortment and at higher figures. A general feeling of confidence has buoyed up the merchant class, advances acting as a stimulant. Orders placed early in the season are being duplicated at new prices, and, while it is doubtful if the demand has kept pace with the supply, there is sufficient evidence to prove that seasonable goods are being freely distributed.

The disturbing element that characterized the first stage of rising prices was the anxiety on the part of some jobbers to realize on their first cost regardless of market values. What was the result? In many cases goods were being sold by the jobber below the manufacturer's prices, and every bill so sold was an obstacle in the road to improvement. There is only one standard upon which to base your profit. It matters not so much what an article may cost you, as what you can replace the same article for when sold. With successive advances this price-cutting feature is being eliminated. Few, if any, jobbing houses can boast of a stock of goods bought at old prices—some one or two lines may have invited "plunges"—but taking staple Hardware throughout, all wholesale houses are in much the same position. Working together in a spirit of harmony it is the duty of every jobber, and every retailer as well, to maintain the new prices as long as they remain within the boundary of true values. When the borderland is passed which marks the true from the false—should an era of inflation set in—old remedies will be applied to counteract it.

The recent cold snap has drawn attention to many winter goods somewhat in advance of the regular season. Stove Pipe (a little out of joint) is being put up. A demand for Weather Strip is *felt*, and judging from the inquiries received for Skates, these promise to "move along" fast enough later on.

Collections are fairly satisfactory from nearby territory, and in the far South give promise of early improvement.

TABB & JENKINS HARDWARE CO.

THE BOSTON TRADE.

A slight improvement is noticed over last month, but orders for seasonable goods are being placed in such quantities that it is evident that the retail trade are still on the cautious side and are willing to buy only as their immediate demands require.

Although prices are still very firm, there have not been advances that were predicted a month ago, and about the only changes to be noted are those which are brought about by a combination of manufacturers who have come together and agreed to make certain advances which are thoroughly legitimate owing to the fact that certain goods are being made at a loss. The advent of the winter season, the natural decrease in the demand for general Hardware, the weakness in the Iron market will have its effect upon both trade and prices, and we anticipate but few changes before January 1st.

FRYE, PHIPPS & CO.

THE PHILADELPHIA TRADE.

On the whole business may be said to be about normal with an average trade doing, and holiday goods such as skates, cutlery, etc., in fair demand with the prospects that the demand will be much larger in future as consumption increases.

A recent railroad ride through a part of our State showed the writer that the Iron establishments were in full blast and working night and day to take advantage of the better prices.

It is somewhat encouraging to find that business is normal despite the fact that prices have a tendency to depress trade, and jobbers and retailers alike are now inclined to refrain from buying until they can see whether the manufacturers will have sufficient backbone to maintain the recently advanced prices. In spite of this tendency, however, to curtail trade, it is, as we have said before, about normal, and largely increased weekly wage rolls are bound to have an effect on the purchasing power of the country, and it must inevitably follow that forced economizing for consumption cannot continue and the goods that are used up and worn out must be replaced. All this makes us hopeful for the future and to believe that a fair volume of business may be expected now with a larger volume in the near future. Trade this week shows a greatly increased volume over the week before, while collections are improving and prices are still tending upward.

The Nail men and Barbed Wire manufacturers have called a halt for the present, and it is hard to foretell what the prices will be in the near future. Manufacturers claim

Digitized by Google

that present prices do not pay them exorbtant profits, and that with increased raw material and higher wages, all goods must bring more money.

We are still feeling the effects of the drought, and although we have had one or two light rains, a week's steady rain is earnestly desired before the advent of cold weather. While this would be too late to save farming losses, it would put the agricultural community in better shape for the winter. BIDDLE HARDWARE CO.

The New York Bicycle Show.

In the original arrangements the spaces for exhibitors were to be allotted on October 9th, but when that date arrived it was found that there were at least 300 applicants for 210 spaces. The Board of Trade and the management of the Madison Square Garden considered the problem that confronted them, and decided to remove the seats from the arena and the balcony, building platforms on both, thus providing a large increase of space. The new diagram has been drawn and approved by the Board of Trade. It provides for 342 exhibition spaces. The show will continue from January 18th to 26th inclusive.

Mr. George Chatillon of John Chatillon & Sons, Nos. 85 to 93 Cliff Street, New York, has returned from Europe where he has been the greater part of the summer.

Help Wanted.

WANTED—Profitable side line. Salesmen calling on Hardware trade can make big money for next two months. A strictly holiday specialty. Address QUADRUPED NOVELTY CO., Canton, Ohio.

Situation Wanted.

A DIE and tool maker of fifteen years' experience wants a position. J. SETLMAYER, No. 366 Linden Street, Brooklyn, N. Y.

I AM open for an engagement. Am at home on the road or behind the counter. Have traveled in Minnesota, Wisconsin and North Dakota. Can furnish A1 references. J. FRED. SMITH, General Delivery, Minneapolis, Minn.

HARDWARE salesman, sixteen years' experience, wants a position, city or country. Address A. D. G., No. 56 Bleecker Street, Brooklyn, N. Y.

WANTED—By a young man thoroughly posted in builders' and general Hardware a position to represent some good house on the road in this State. Good salesman and thoroughly competent. References A1. Address M., care HARDWARE, No. 143 Chambers Street, New York.

Side Line Offered.

SALESMAN for paying side line, flatware, etc., selling to Hardware and general store trade. Commission. Address L. L., Room 55, No. 221 Fifth Avenue, Chicago.

To Let.

A DESIRABLE office to let with the Van Wagoner & Williams Hardware Co., No. 14 Warren Street, New York City.

RETAIL TRADE RECORD.

Hardware dealers, the country over, are requested to contribute to this page. News of new stores, changes, improvements, etc., will be gladly received, and promptly published.

New Hardware Stores.

Andover, Mass.—John Driscoll.
Appleton, Wis.—Stark & Tesch.
Braidentown, Fla.—W. C. & G. H. Watts.
Corinth, N. Y.—S. & J. Marten.
Elmira, N. Y.—Chapman & Bower.
Harrison, Mich.—H. B. Seagrave.
Savannah, Mo.—Bridges Bros.
Woodstock, N. B.—Burt, Lee & Hale.

Record of Changes.

Auburn, Ind.—Brown, Culbertson & Boland, Hardware and pianos, sold out piano stock to Rodgers & Stafford, and will devote entire attention to Hardware business.

Lafayetteville, N. Y.—The old established firm of Nichols & Austin has dissolved partnership by mutual consent, Wm. Austin retiring from the firm. The business hereafter will be conducted by Volney H. Nichols and son, John D. Nichols.

Lexington, Tex.—J. A. Hitchcock, Hardware, stock purchased by J. C. Hillsman & Sons.

Little Rock, Ark.—The Foster Hardware Co., stock purchased by W. C. Foster, who will continue the business.

Lumberton, N. C.—E. K. Proctor, Sr., has disposed of his stock of goods to E. K. Proctor, Jr., and G. B. McLeod.

Malden, Ill.—Pierson & Sutton, Hardware firm; Louis Sutton has retired and been succeeded by Charles Piper, and the Hardware business will be continued under the name of Pierson & Piper.

Mammoth Springs, Ark.—M. Matthewson, dealer in Hardware, groceries, etc., has admitted J. E. Sharum to the firm.

Marlow, N. H.—Arthur M. Davis has purchased the tin and Hardware business of Clarence E. Morrison.

Montevideo, Minn.—Champlin & Peterson, Hardware, etc., reported to have been succeeded by Peterson & Smith.

Morrowville, Kan. — Victor T. Reeve, Hardware, etc., disposed of stock to E. S. Reeve.

Muncie, Ind.—F. C. Spradling & Co., Hardware and agricultural implements, reported to have been succeeded by W. H. Ballard.

Murray, Iowa. — Charles Kline, Hardware, reported sold out.

Owatonna, Minn.—Parrott & Smith and Crandall & Nelson have purchased the Hardware stock of John T. Clarke, who recently assigned. The price paid was $800.

Nappannee, Ind. — Hoover & Mosiman, Hardware, stock sold to Philip Weiss and Edward Frevert, both of South Bend.

Omro, Wis.—W. W. Race & Son, Hardware, reported to have been succeeded by W. W. Race.

Orange, Tex. — Robinson & Gardner, Hardware, stoves, etc., have dissolved partnership.

Palmer, Kan. — James Creager, Hardware, stock purchased by Henry Dittmer.

Plattsburg, Mo. — Gordon Bros., Hardware firm, J. A. Gordon sold interest to Elmer Martin, and the firm will hereafter be known as Gordon & Martin.

Pontiac, Mich.—H. F. Messinger has sold out his stock of Hardware to E. J. Hallett, who will continue the business.

Port Leyden, N. Y.—Hoyt & Riggs, Hardware, reported to have been succeeded by Farley & Riggs.

Richfield, Neb.—Huntsberger & Clements, Hardware, etc., reported to have been succeeded by A. Becker.

Sandusky, Ohio.—The old Hardware firm of Sanderson & Foster have dissolved partnership, James B. Sanderson retiring. Mr. Sanderson's interest was purchased by Fred Graves, and hereafter the firm will known as Foster & Graves.

San Francisco, Cal.—Wright & Olsen, Hardware and stoves, reported to have dissolved partnership.

Sheffield, Ala.—The Adams Hardware Co. has succeeded to the business of B. H. Adams & Co.

Stockton, Ill.—Frank D. Murphy, Hardware, reported to have been succeeded by Murphy & Goldhagen.

Syracuse, N. Y.—P. J. Mack has sold his Hardware stock to the Burhans & Black Co.

Tacoma, Wash.—Palmer & Belch, Hardware dealers on Tacoma Avenue, partnership dissolved.

Titusville, Fla.—Ray & Day, Hardware, stock purchased by S. H. Happersett.

Tyler, Minn.—W. E. Dean, Hardware, reported to have been succeeded by B. Chester.

Webster, N. Y. — Frank Jones, Hardware, stock purchased by W. A. Smith.

Wellston, Ohio.—The old and established Hardware firm of Lasley McGhee & Co. has dissolved, and P. H. McGhee is now sole owner.

Wellsville, N. Y.—Lewis & Wells, general Hardware dealers, have sold their business and stock of goods in the Tullar Building to W. J. Hoyt and Chas. F. Vincent, and the new proprietors will take possession as soon as the inventory can be completed.

West Indianapolis, Ind. — W. S. Hoss, Hardware, reported to have been succeeded by Hattie B. Hoss.

Improvements and Removals

Longview, Tex.—D. D. Pinkham, Hardware dealer, will remove his business to new quarters, where he can conduct same on an enlarged scale.

Business Embarrassments.

Augusta, Me.—Horace Little, Hardware dealer, has assigned to Orrin Williamson and Thomas Leigh, Jr.

Beatrice, Mo.—The Hardware establishment of Crump & Dix has been closed under a chattel mortgage given to Bryan Bradt and others. The amount of the mortgage is $3841.

Cissna Park, Ill.—Joel Zeller, Hardware, reported to have made an assignment.

Eastland, Tex.—J. B. Sanders, Hardware merchant of this place, has made a general assignment, naming D. K. Scott as assignee. Assets approximated, $4500; liabilities approximated, $4000.

Evanston, Ill.—John Witt, a retail dealer in Hardware in Evanston, has made an assignment in the County Court to William S. Paden. The assets are placed at $11,000 and the liabilities at $7500.

Newport, Ky.—Wendt & Wente, Hardware dealers, have assigned. The liabilities are about $17,000, and the books show the assets to be larger. The principal creditors are as follows: Howell Gano & Co., $4000; Standard Oil Co., $450; German National Bank of Newport, $3000, amply secured; Laflin & Rand Powder Co., $3213.49. L. J. Crawford qualified as assignee.

Port Chester, N. Y.—Edward Kapp, the Hardware dealer, successor to John W. Sickels, has made an assignment for the benefit of his creditors.

Syracuse, N. Y.—The Hardware store of Frank Diel at No. 225 West Fayette Street has been closed by Deputy Sheriff Whittie on several executions issued upon judgments rendered upon compromise. These judgments were in favor of the following persons, and for the following amounts: Sill Stove Works, $1684.85; Theodore H. and Chester F. Wickwire, $2071.75; Gurney Refrigerator Co., $1555.21; Scranton Stove Works, $1199.33; Glazier Stove Co., $407.68; Haberman Mfg. Co., $575.05; Bank of Syracuse, $938.02; Louisa M. Diel, $5390.25.

Wilmington, Ohio.—The Hardware firm of Jeffreys, Hunnicutt & Co., the largest dealers in this city, have filed a deed of assignment in the Probate Court for the benefit of creditors. The assets are about $25,000; liabilities unknown.

Winterset, Iowa.—Payton & Co., Hardware dealers, have assigned, turning their stock over to the First National Bank to secure a claim of $25,000.

Burglaries in Hardware Stores.

Belmond, Iowa.—Peter Stacy, $200.
Brooklyn, N. Y.—Jacob McKeever, $60.
Halifax, N. S.—Melvin, $25.
Lexington, Ky.—Logan & Higgins, $100.

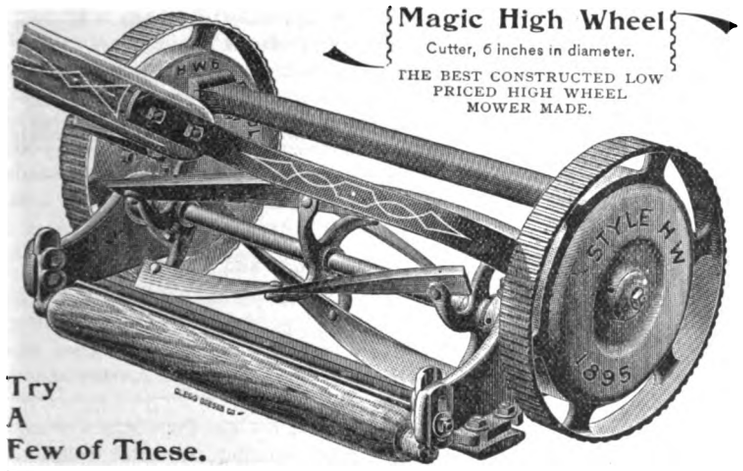
THERE is always a time in the career of every business when Quality and Finish is necessary to build up and maintain your business.



Has this time yet come to you?

It has if you wish to continue the confidence your customer has placed in you. The more competition you have the better ought to be your line of Barrows.

Thoughts and Ideas are valuable, but to maintain the intelligent effort, your goods must maintain a high quality and a moderate price. **THE CHAMPION BARROWS** possess all the above. What more can you ask?

BICYCLE TRADE RECORD.

Bicycle manufacturers and dealers, the country over, are requested to contribute to this page. News of new stores, changes, improvements, etc., will be gladly received, and promptly published.

New Companies, Stores, Etc.

Akron, Ohio.—John F. Seiberling has organized a company to manufacture bicycle tires, and will equip a factory to turn out 300 pairs daily, giving employment to 300 men.

Anderson, Ind.—A syndicate of capitalists is reported organizing at Cleveland, to erect and operate a $75,000 bicycle plant.

Chicago Ill.—The Continental Cycle Co. has been incorporated by W. Irving Osborn, Albert S. Lauer and A. M. Farnsworth, to manufacture cycles. Capital stock, $50,000.

Chicago, Ill.—The Gladiator Cycle Works have established a bicycle factory at Nos. 109 to 115 West Fourteenth Street. Frank Wenter is president of the company; L. C. Kuhners, vice-president; John C. Catage, treasurer; W. C. Johnson, secretary, and A. B. Ellis, assistant secretary.

Cleveland, Ohio.—The Wheelman's Protective & Repair Co. has been incorporated by J. A. Fogle, George H. Allen, Ewell F. Merrell, John I. Jones and Chas. I. Dailey, of Cleveland, to do a bicycle repairing business. Capital stock, $10,000.

Council Bluffs, Iowa.—The Deere-Wells Co., manufacturers of agricultural implements, are reported to be preparing to take up the manufacture of bicycles.

Defiance, Ohio. — The Defiance Bicycle Co. has been incorporated by Elmer T. Clark, O. D. Loveridge, H. B. Miller and others, with a capital stock of $50,000.

Fredericksburg, Va.—J. E. Stonebraker has commenced the manufacture of bicycles.

Grand Rapids, Mich.—Grand Rapids Bicycle Co. has been incorporated, with a capital stock of $10,000.

Holyoke, Mass.—Fred LaBelle and others are organizing a company to manufacture a bicycle, of which he is the inventor. Those at the head of the enterprise announce that they will have at least 1000 wheels on the market by the middle of April.

Lockport, N. Y.—Charles Whitcomb and others have organized a company to manufacture bicycles.

Madison, Wis.—The D. D. Warner Co., preparing to commence the manufacture of bicycles. A new factory is in process of erection, and is to go into operation immediately.

New York, N. Y.—Charles J. Stebbins, No. 103 Reade Street, has been appointed New York agent for the wheels manufactured by the Syracuse Cycle Co. He is now improving and remodelling his place of business.

Philadelphia, Pa.—The F. H. Dampman Cycle Co. has been incorporated by F. M. Dampman, Joseph and Thomas Holbrook, John H. Draper, T. Buschard and others, with a capital stock of $25,000.

Pottstown, Pa.—A. Metz and Harry Rogers, of Spring City, have formed a partnership for the manufacture and caring of bicycles. The old plant of the American Wood Paper Co. is now being put in condition for their use.

Rochester, N. Y.—The Shone-Hanna Mfg. Co., has been incorporated by James W. Shone, Albert T. Bradley, Roswell J. Hanna and Geo. McTaggert, to manufacture bicycle sundries. Capital stock $5000.

San Francisco, Cal.—Fred. R. Cook, corner Nineteenth and Guerrero Streets, has commenced the manufacture of bicycles, devoting especial attention to low-framed diamond wheels for ladies.

San Francisco, Cal.—William Jennings, bicycles, will open a new store at No. 184 South Park Street, and will handle the Falcon bicycles.

San Jose, Cal.—Rice, Mitchell & Co. bicycles, have opened new store at No. 16 South Second Street, handling the Lovell Diamond, the agency for which has been discontinued by Henry C. Smith.

Sheboygan, Wis. — Jenkins Machine Co. has commenced the manufacture of high grade bicycles, embodying a number of new improvements.

Spokane, Wash. — The Fred. T. Merrill Cycle Co. have leased three story brick building, and will conduct a wholesale and retail bicycle business.

St. Louis, Mo. — Mississippi Valley Cycle Co. has been incorporated by Mark Leavenworth, Frank J. Kaiser and John McGeorge, to manufacture and deal in bicycles. Capital stock $50,000.

Washington, D. C. — Robert Noble has opened a new bicycle store at No. 443 G Street, Northwest.

Changes and Removals.

Geneva, Neb. — James Piefenberg, bicycles, etc., has moved his business to Fremont, Neb.

Indianapolis, Ind.— Oker & Lake, bicycles, partnership reported dissolved.

Middletown, Conn.—The Worcester Cycle Co., of Worcester, Mass., is reported negotiating, with a view of moving its plant to Middletown, the only question being the relief from taxation for a term of years, which condition will probably be met. The company will employ 250 hands, and report orders sufficient to keep them busy for one season. The works of the Schuyler Co. are to be sold at auction October 15th, and the Worcester Co. will probably purchase this plant.

Milwaukee, Wis.—Reitzner & Wicks, bicycles, succeeded by the J. A. Wicks Cycle Co. Mr. Reitzner retires to give his entire attention to the Milwaukee Japan Enameling Co.

Milwaukee, Wis.—The Bolte Cycle Mfg. Co., Frank H. Bolte, reported withdrawn from the active management of the company, retaining, however, his interest. He has been succeeded by J. R. Connell and D. A. Donlevy.

Minneapolis, Minn.—The Adams Mfg. Co. have leased a building at No. 403 Sixth Avenue, and will move from their present quarters this month. This movement is made to enlarge their facilities. They will manufacture a number of new specialties for the 1896 trade.

Providence, R. I.—Edward A. Godding, bicycles, has been succeeded by the Eastern Cycle & Supply Co.

Rochester, N. Y.—The Rochester Cycle Co. has removed to larger quarters in the Hayden Furniture Co. building, which building has been adapted to the manufacture of bicycles. The company occupies an area of 25,000 square feet, and within the building will be conducted all the various departments of the business, for the manufacture and sale of bicycles.

Sedalia, Mo.—G. H. Wehrman and A. Wehrman, doing business under the firm name of Sedalia Cycle Co., have dissolved partnership, A. Wehrman retiring, G. H. Wehrman continuing the business under the same name.

South Norwalk, Conn.—W. C. Foote and Edgar H. Fox, doing business under the name of the Fox Cycle Co., have dissolved partnership.

Topeka, Kan. — Coughlan, McHenry & Chesney, bicycles, reported sold out to the Capital City Cycle Co.

Westboro, Mass. — The Cycle Improvement Co., manufacturers of Janney pedals and other bicycle accessories, preparing to move into more commodious quarters, when their output will be increased to 100 000 pedals a season. F. F. Clements succeeds George L. Smith as treasurer of the company.

New Goods and Improvements.

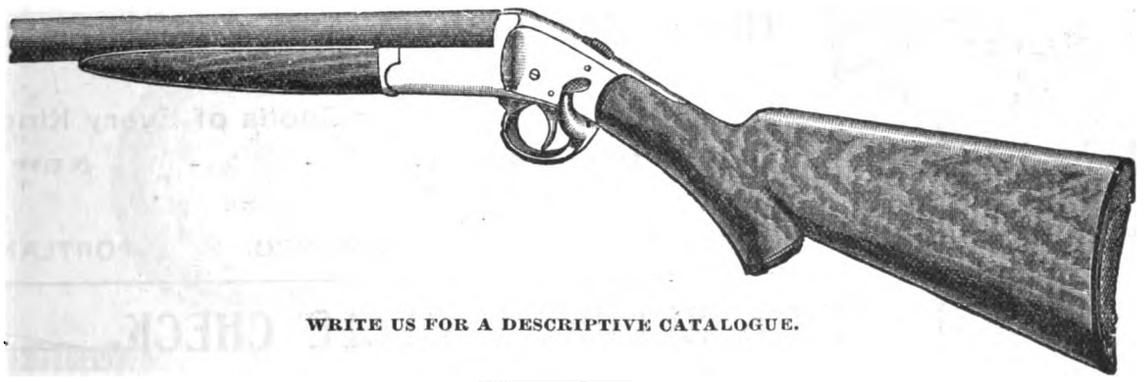
Boston, Mass. — The Boston Compound Cycle Co. have purchased a factory building on Union Street, Ashland, and give employment to 200 operatives for the manufacture of bicycles.

Hartford, Conn.—The Pope Mfg. Co. have added a drop hammer, the total weight of which is 50,000 pounds, and which has the distinction of being the largest drop hammer ever made.

Holyoke, Mass.—Henry F. Rashich is reported interested in the organization of a company to manufacture a device for doubling the speed of the main sprocket wheel in bicycles, while the pedals revolve but once. The invention has been patented by Mr. Rashich.

Indianapolis, Ind.—The Indiana Bicycle Co. announce that the capacity of their manufacturing plant has been doubled.

Milwaukee, Wis.—Julius Andrae & Sons' Co., reported leased factory building corner Clinton and Florida Streets, formerly occupied by the Filer & Stowell Co., and will equip it for the manufacture of bicycles. They will move from their present location into the larger quarters shortly.



Toledo, Ohio.—The Toledo Bicycle Co., manufacturers of the Dauntless bicycle, have just moved into quarters three times the size of the plant formerly occupied, and will increase their working force from 65 men to 200.

Torrington, Conn.—The Alvord & Spear Mfg. Co. are putting on the market the Torrington rim for bicycles.

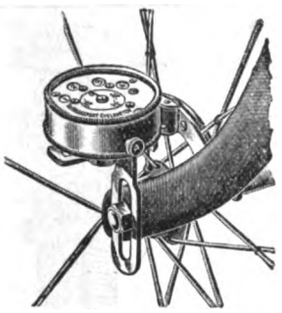
FITCHBURG, MASS., U. S. A.

FOR SALE!

A LARGE MANUFACTURING PLANT.

Lately used as a Bicycle works. Large part of shafting and pulleys already in position, so that machinery could be attached and operations begun at once. Capacity, 15,000 Wheels per annum. This property, with water-power, is well adapted to many kinds of manufacturing purposes, and will be sold cheap. For further information, address



J. S. DICKSON, 98 4th Ave., Pittsburgh, Pa.

When you begin handling bicycles

One of the important things for you to do is to find the pneumatic tire which has the most friends. When you have found it, stick to that tire. It will be well for you to know that more than sixty-five per cent. of the total tire business is done by Morgan & Wright, Chicago. They have a guarantee which guarantees. They know how to take care of their customers. You have often seen their trade-mark—

MORGAN & WRIGHT TIRES ARE GOOD TIRES

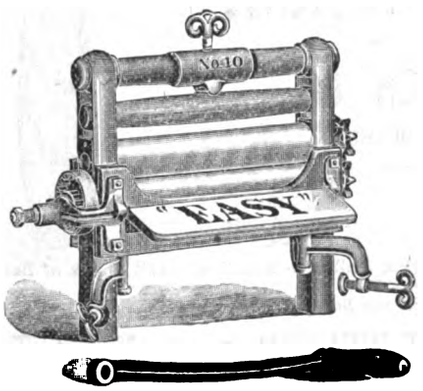
The M. & W. quick-repair pamphlet is interestingly illustrated from life.

THE 10,000 MILE BRIDGEPORT CYCLOMETER

IS THE ONLY 10,000 MILE CYCLOMETER THAT IS DUST AND WATERPROOF AND CANNOT BE TAMPERED WITH.

We Guarantee Bridgeports to be More Accurate than a Watch

and not susceptible to change of temperature.



Made in three styles, Models "A," "B," and "C." Made for 26, 28 and 30 inch wheels.

MODEL "C" registers 10,000 miles and repeats; handsomely nickel plated, with celluloid face plate. This instrument is principally adapted for century clubs, long rides, and for riders who do not care to set their cyclometers back to zero.

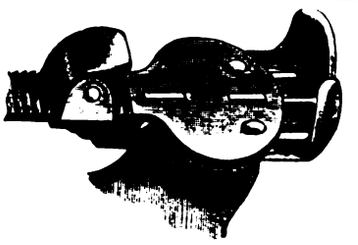
PECK & SNYDER'S NEW AMERICAN CLUB SKATE.



Peck & Snyder's NEW AMERICAN CLUB SKATE for 1895 has revolutionized the art of skate making. New American Club represents an entirely new heel clamp that will fit any heel instantaneously. The old method of clamping to the heel is entirely done away with. It cannot slip, is stronger, acts instantaneously, no screwing or adjusting necessary, saves time, and is without question the most perfect heel clamp ever invented.

MADE IN FIVE GRADES.

Peck & Snyder's New American Club Skate is the most perfect skate ever constructed. It has simplicity of adjustment, solid foot plates, solid heel clamps, and will fit any heel.

The Clasps Cannot Slip. Sure Grip. Thumb Screws and Sets entirely disregarded. It is Light, Handsome, and Twice as Strong as the old club skate.

HERE'S THE NEW CLAMP.

Ask your jobber to show you samples of the "New American Club." If he doesn't carry them, send direct to us for samples and prices. Handsomely illustrated catalogue of this skate mailed on application. Address

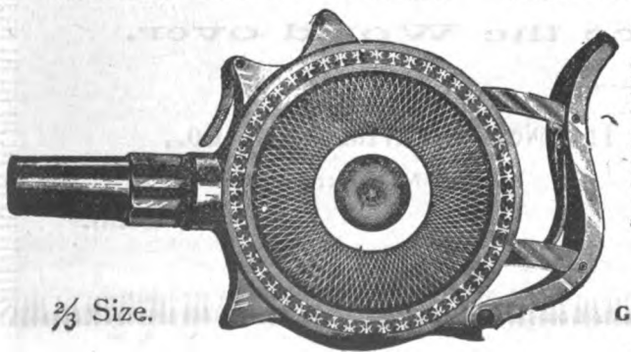
BEST AND CHEAPEST

STONE WATER FILTER

ON THE MARKET.

Tripoli Stone Block System.



Set up ready for use. There are two crocks, each of four gallons capacity—an upper one holding the Filter Block, and the lower one, which can be used as a water cooler if desired. This Block is four inches in diameter by the same in height, and is hollowed out on inside. This fits on a metal tube, which fastens by means of a nut to bottom of Filter Jar. Block can be lifted off tube, cleaned and replaced in two minutes, and with no trouble at all. Water passes from outside of block, through the walls, into the hollow chamber, and from thence, by the means of the Drip Tube, into the lower receptacle.

The Finest Piece of Salt Glazed Stoneware Ever Offered the Public.

The above illustration is taken direct from a photograph, and shows the interior construction of an Iron Building designed and built by us for the Link Belt Engineering Co., at Nicetown, Philadelphia, Pa. The building is 71 feet in width by 180 feet in length, divided into two equal parts—one side being controlled by a traveling crane and the other side being controlled by jib cranes. The photograph is taken looking through the portion of the building which is controlled by a traveling crane—this traveler being supported by girders, which in turn are supported by a line of posts and girders through the center of the building. The roof trusses are made of iron, with iron purlins covered with corrugated iron.

MANUFACTURED MICA GOODS OF ALL KINDS.

BEST AND CHEAPEST OYSTER KNIVES IN THE MARKET.

GEO. T. MOE & CO.,

52 N. Second Street, Philadelphia, Pa.

HALL'S IMPROVED PIPE WRENCH.

DO YOU SAY that this wrench will crush or cut the pipe? It will, and so will ANY PIPE WRENCH if you don't know how to use it. The principal cause of Pipe Wrenches crushing or cutting the pipe is because the GRIPPING POINTS ARE DULL.

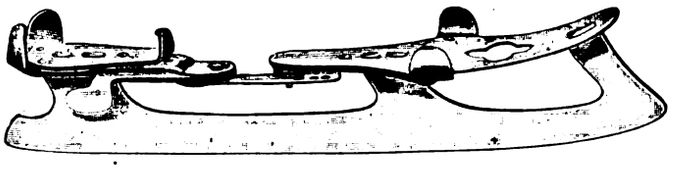
THIS WRENCH if kept sharp

will grip high on the pipe, and you can screw a pipe so tight that it will open a malleable fitting, and strip the thread, WITHOUT CRUSHING OR CUTTING THE PIPE.

You can sharpen THIS WRENCH IN A FEW MINUTES on a grindstone or emery wheel WITHOUT TAKING IT APART.

It is impossible to LOCK OR WEDGE THIS WRENCH on the pipe.

It will COST LESS FOR REPAIRS than any other Pipe Wrench.



IT IS THE BEST SCREW WRENCH, as it is stronger than any other, and by pulling the reverse way it will grip a nut or fitting and WILL NOT SLIP.

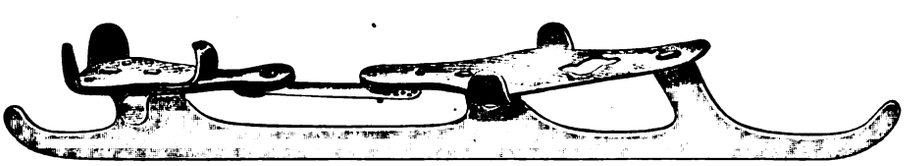
It is DROP-FORGED from TOOL STEEL.

Sam'l Hall's Son,

229 West 10th St., New York.

Digitized by Google

Worcester, Mass., October 1st, 1895.



TO ICE SKATE BUYERS:

We have a great success in our new adjustment for Ice Skates. Jobbers and retailers have recognized the merit of our goods, and our sales have been very large.

Traveling representatives of a competing ice skate manufacturer have recently been guilty of a systematic effort to sell their ice skates by willfully misrepresenting our new adjustment. So great has been their distress that they have tampered with our patent adjustment in such a way as to impair the working of the skate. Under these conditions they have shown our goods for the purpose of selling their own.

We have a well tried and carefully constructed ice skate adjustment, which marks an advance in skate making, and we guarantee our stock.

Factories: GEORGETOWN, CONN. CHICAGO, ILL.
ESTABLISHED 1818.

THE OLDEST AND LEADING MANUFACTURERS OF GALVANIZED WIRE GOODS IN AMERICA.

"Pennsylvania" Fruit Picker

This Cut almost speaks for itself—the device being so much like the human hand, shows at once the utility of the article.

PATENTED.

AS A FRUIT PICKER IT HAS NO SUPERIOR.

It is made of Heavy Galvanized Wire, and Easily Adjusted to a Pole. It has been sold for several years, and the demand (as it is becoming known) is steadily increasing. The difficulty of detaching fruit and securing it unbruised is apparent to everyone so engaged. This overcomes the difficulty, and saves the finest fruit which commands the highest prices.

THE LOW PRICE AT WHICH IT IS SOLD

Brings it within the reach of those who have but little fruit to gather as well as those who have large quantities. **Price, per doz., $6.00. Liberal discount to dealers.** It will gather Apples, Peaches, Pears, &c.

—MANUFACTURED BY—

ORANGE SPORTING POWDER, MANUFACTURED BY LAFLIN & RAND POWDER CO.

ORANGE RIFLE EXTRA, ORANGE SPECIAL, ORANGE DUCKING, ORANGE LIGHTNING.

The attention of TRAP AND FIELD SHOOTERS, RIFLEMEN AND DEALERS IN GUNPOWDER, is called to the new ORANGE SPORTING POWDER, patented April 17th, 1888, and branded **ORANGE RIFLE EXTRA.**

This Powder is quick and strong, and burns with such perfect combustion that the only residum left in the barrel after shooting is a dark oily substance easily removed While this Powder is not exactly SMOKELESS, it gives only a light bluish smoke, which is almost instantly dissipated, and interferes but little with the shooting of the second barrel, taking the place of the so-called smokeless powders in this respect.

This brand of powder sells at the same price as any other brand of Rifle Powder and is superior to any made. No person who shoots can afford not to give it a trial, as after once trying it he will never use any other Powder when he can obtain the ORANGE EXTRA. Weight and quality guaranteed.

MILITARY, MINING AND BLASTING POWDER.

LAFLIN & RAND POWDER CO., - 99 Cedar Street, New York City.

Barber-Koenig Mfg. Co., No 115 N Vine St., HAZELTON, PA.

HALL'S IMPROVED PIPE WRENCH.

DO YOU SAY that this wrench will crush or cut the pipe? IT WILL NOT if you know how to use it. The principal cause of Pipe Wrenches crushing or cutting the pipe is because the GRIPPING POINTS ARE DULL.

You can sharpen THIS WRENCH IN A FEW MINUTES on a

grindstone or emery wheel WITHOUT TAKING IT APART.

THIS WRENCH if kept sharp will grip high on the pipe, and you can screw a pipe so tight that it will open a malleable fitting, and strip the thread, WITHOUT CRUSHING OR CUTTING THE PIPE.

It is impossible to LOCK OR WEDGE THIS WRENCH on the pipe.

It will COST LESS FOR REPAIRS than any other Pipe Wrench.

IT IS THE BEST SCREW WRENCH, as it is stronger than any other, and by pulling the reverse way it will grip a nut or fitting and WILL NOT SLIP.

It is DROP-FORGED from TOOL STEEL.

Sam'l Hall's Son,
229 West 10th St., New York.

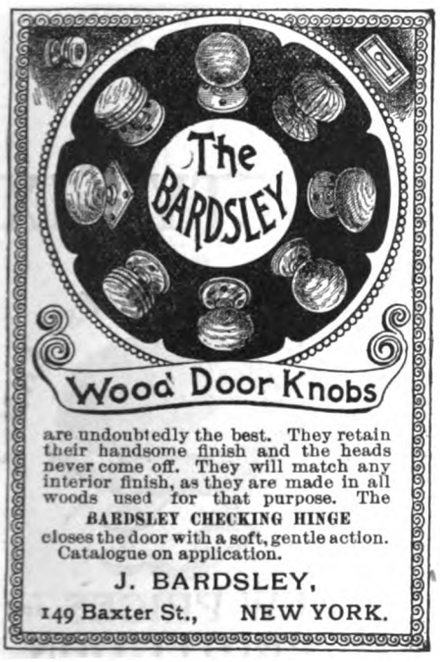
IT TAKES A PULL



to separate the plies of our rubber belting. A yoke of oxen can do it, but hard service won't, so strong is the friction. Our belting is uniform in width and thickness, consequently more of its surface comes in contact with a pulley. That means

NO WASTE OF POWER.

Rubber belting is never injured by water, hence it is best for out-door use, for wet localities, and for mills where the atmosphere is surcharged with moisture or steam, as in paper mills, tanneries, etc. Buy the durable kind, branded 1846-Para, Double Diamond or Carbon, made for 50 years by the

NEW YORK BELTING & PACKING CO. LTD

Pioneers and Leaders, **15 Park Row, New York.**

Wood Door Knobs

are undoubtedly the best. They retain their handsome finish and the heads never come off. They will match any interior finish, as they are made in all woods used for that purpose. The

The AMERICAN WICK is made on scientific principles. The gum inherent in the natural cotton is taken out, and no expense is spared to produce a wick that will give THE GREATEST ILLUMINATION.

THE
AMERICAN WICK
Made by the
WICK DEPARTMENT
Of the STANDARD OIL CO. of NEW YORK.

Oil drawn up through the AMERICAN WICK burns with a large, clear, white light and the flame does not drop off in size as it does when a poor wick is used. When the cotton is clogged with its natural dust and gum the full illuminating power of the oil is not obtained and the complaint is heard that the light DROPS.

Established, 1882. Capacity, 100,000 Tons.

Do You Desire

an article that every family would buy if they simply had their attention called to its merits? If you do, put in a stock of P & A's Banner Oil Stoves. See Cut.

No. 971. Heater Complete. Height, 27 inches.

Banner Oil Heater

SIMPLE, NOVEL and PRACTICAL.

Requires less care than the ordinary Lamp.

Will burn 10 to 15 hours and heat comfortably a room 15 to 20 feet square.

NO SMOKE! NO ODOR!
PERFECT COMBUSTION.

POINTS:

The Oil Fount is brass, handsomely embossed and highly nickeled. It holds one gallon of oil. As each fount is tested under steam pressure before leaving factory, there is no danger of leaking.

No Chimney. The drum of the **BANNER** in its construction acts as a chimney, saving the expense incident to the renewal of glass chimneys of other makes.

The Fount Frame is artistically made of wrought iron, making a solid base for the stove.

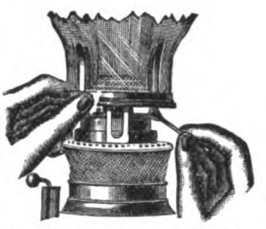
The Burner is the best made, and ONLY ONE with feeder wick, allowing all the oil to be consumed.

The Indicator shows at all times how much oil there is in fount.

The Flame is regulated with our ratchet wick movement, which allows the wick to be raised or lowered with nicety and exactness.

Lighting. It is not necessary to remove any part of the stove to light it. The sliding door in the drum is made for this purpose.

Draft. The round openings in the drum create great suction of cold air in addition to the regular draft. Double the radiating force of the ordinary stove is thus secured.



Get one for your Bed, Bath or Smoking Room, Library, Nursery, Office or Conservatory.

An Advertisement

If you have a sign over your door, you are an advertiser. The sign is intended to advertise your business to passers-by. An advertisement in a reliable Trade paper is only so many thousand signs spread over a great many square miles.

You can't carry everybody to your sign, but HARDWARE can carry your sign to everybody.

OUR STAR HACK SAWS

Are used in nearly all of the Iron Working Shops in this country and Europe. Now we wish to introduce them to the Farmers and Householders generally. They will cut Iron, Steel, and Wood equally well. One blade which costs five cents, will cut off an inch-square bar of iron 100 times without filing. They will do most of the work of a file at one-tenth of the cost. All of our best blades are rounded at the ends and stamped with a star.

As a sample, we will send one Steel Frame and Six Blades by mail, prepaid, on receipt of $1.00. Or, they can be had of all the best Hardware Dealers, who usually keep a good line of our high-class tools.

News from South Africa.

The friendship and intercourse between nations, "even unto the utmost corners of the earth," grow closer and more marked with the passing of every year, and this good feeling, and interest in the affairs of other nations, is largely due to the international exhibitions that are being held with increasing frequency in all parts of the civilized world, and, in fact, in parts which until recently have been regarded as uncivilized. The great success of our own World's Fair is largely responsible for the revival of interest shown in these exhibitions. By these means the rival manufacturers of different countries hear that there are others in the field besides themselves, and come to the conclusion that they must be up and doing, or be left behind in the race for commercial supremacy. This leads to an exchange of ideas and the adoption of the latest improvements, which must necessarily result in universal benefit and mutual esteem.

The South African Republic is to have an international exhibition in Johannesburg during the months of May and June, 1896. The enterprise has been assured the support of the government, and President Kruger has consented to act as president of the exhibition. The principal departments of the exhibition will be displays of agricultural implements and mining machinery. The world-wide benefits that must result in the opening up of South Africa, can readily be seen. It is a region rich in gold mines, and offers exceptional advantages for wool growing and agricultural enterprise. South Africa has been very much before the public eye of late, owing to the craze to invest in the celebrated Kaffir mining stocks that prevails in the capitals of Europe, and to the recent success that has attended the arms of France in Madagascar.

While it is a loss to the public service, we feel that it is a gain to the Hardware trade, that Thomas F. Keating was not chosen to the office of Register, to which he had been nominated. The only thing that stood in the way of his election, was the fact that upon this occasion the city of New York decided to give the Tammany Hall ticket a show, and the gentleman who so ably represented the Hardware trade upon the other side, went down in the general wreck. Mr. Keating made an honest, clean, manly fight, winning the respect of his political enemies and the plaudits of his friends. He has little to regret in connection with his canvass, and many pleasant things to remember. Not the least of these is the fact that no man could have had from the beginning, and all the way through, a more earnest, willing and patriotic support from his business associates everywhere than was noted in the attitude of the Hardware trade toward the fusion candidate. He is capable of appreciating this fact fully, and we are sure that the remembrance will be held as one of the most pleasant things in his busy and useful career. From a trade standpoint, we cannot regret the result. Mr. Keating is too good a Hardwareman to be lost from the ranks.

The second meeting of the National Hardware Association will open in Pittsburg on Wednesday, November 20th. This great organization had its beginning one year ago in Cleveland, Ohio, and the interest there shown by Hardwaremen representing all sections of the country was such that the Association was placed upon a firm footing and commenced life under auspices of a most favorable character. This forthcoming meeting promises to be equal in all respects to that of its predecessor, and from what we know of Pittsburg, we can be positive that the visiting members will be treated in a most cordial manner, and will leave the Iron City feeling that the hospitality of Western Pennsylvania is something to be pleasantly remembered.

The business men voted at the late State elections, of course, and took the usual interest in the result, but we do not believe many of them neglected their affairs for politics to the extent that has been noted in some campaigns past. A man can vote as he thinks best, and take the most patriotic interest in all that is going on politically, without shutting up his store or closing his factory, to go into the streets and hurrah. Carrying a torch may aid in the spectacular display, but we never could understand how it could make votes. It is a hopeful sign when our campaigns are carried on with calm judgment, and, above all, a lack of mere noise for the sake of noise.

Digitized by Google

Elsewhere are printed full lists of the exhibitors in the Chicago and New York Bicycle Shows of 1896, with the spaces that each is to occupy. These events are of especial interest to the Hardware trade, and any dealer who can arrange his affairs so that he will be in New York or Chicago upon the dates for these great exhibitions, should not fail to do so. The bicycle has become a permanent part of the Hardware trade.

Some of our esteemed cotemporaries do not believe that even in this age of trolleys and bicycles the horse "must go." Perhaps not altogether, but it is a certain fact that so far as street cars are concerned, he has gone already.

Supplee Hardware Co. and Wheels.

Advance circulars from the Supplee Hardware Co., Philadelphia, would tend to show that they expect to make their Bicycle department during the season of 1896 a leading one in their large establishment, and from the purchases that they have already made it would show that they are well satisfied as to having lines that will prove salable for the Hardware trade to take hold of. Necessary to accommodate rapid increase in this department of their business, they have been obliged to seek quarters outside of their regular store house, and have leased the large four-story building, No. 415 Commerce Street, which is to be held solely and entirely for their Bicycle department. From their advertisement on page 52 will be noted a line of Syracuse Crimson Rim Bicycles, as manufactured by the Syracuse Cycle Co., heading the list. On this make of wheel they control trade in the States of Pennsylvania, southern New Jersey, Delaware, Maryland, Virginia and West Virginia, North and South Carolina, Georgia and Florida. They will also represent the National Sewing Machine Co., of Belvidere, Ill., with the Eldredge and Belvidere machines, in connection with which they, of course, will have a line of medium grade and cheaper wheels, juvenile wheels and sundries.

E. T. Barnum's Catalogues.

We have at hand the fall Hardware supplement to the complete catalogue issued in the spring by E. T. Barnum, Detroit, Mich. It illustrates and describes a host of wire and iron goods, including flower pot stands, steel folding gates, steel window guards, iron cresting, tower ornaments, weather vanes, and bank and office counter railings, iron bedsteads, lattice jail cells and many others. He also issues supplements to the fence catalogue and builders' catalogue, and a complete catalogue devoted to steel jail cells and jail work. These have been sent to the trade all over the United States and some foreign countries. The firm will be glad to mail a copy of any complete catalogue to all who write for one, stating the kind of work they require, so that they may receive a catalogue devoted to that kind of work.

National Hardware Association.

The National Hardware Association, which was formed under such favorable auspices in Cleveland a year ago, will hold its annual meeting in Pittsburg on November 20th, 21st and 22d. It is expected that about 125 delegates will be present, representing the principal houses of the United States. The Hardwaremen of Pittsburg are making preparations to entertain their guests in a hospitable manner. An excursion on the river, tours of some of the great iron plants, and a banquet, are among the events already planned. The headquarters of the Association will be at the Monongahela House. W. W. Supplee, of Philadelphia, is president, and T. James Fernley, of the same city, secretary.

A Leading Social Event.

One of the great social events of Brooklyn of the present season was the marriage of Miss Florence Norton Bissell, the daughter of Mr. and Mrs. Eugene Bissell, to Edgar Frederick Luckenbach. Mr. Bissell, it is hardly necessary to say, is the head of the well-known firm of E. Bissell, Son & Co., New York, and has been one of the most efficient of the governors of the New York Hardware Club since the beginning of that very successful organization.

The ceremony was performed on the evening of October 30th, in the South Congregational Church, on the corner of Court and President Streets, Brooklyn, the Rev. A. J. Lyman, pastor, officiating. The church was crowded with friends of the happy young couple who were to be made one. It was handsomely decorated, the chancel being banked with tall palms, relieved by pink and white chrysanthemums, and the pews reserved for families of bride and groom ornamented with la France roses and ferns, tall white posts surmounted by white chrysanthemums marking the division. The bride was attended as maid of honor by Miss Yale, of New York, and the bridesmaids were Miss Lilian Dustin, Cambridge; Miss Lilian Pitkin, Miss Alice Mackay, Miss Effie Conrow, of Brooklyn. Miss May Bissell, of New York, acted as flower girl, and Master J. Lewis Luckenbach as page. The best man was Walter A. Luckenbach, and the ushers were T. Ellett Hodgkin, Charles A. Schieren, Jr., Paul Libby, W. W. Walsh, Jr., Henry W. Steinhauser, John B. Joy.

A reception followed the ceremony at the home of the bride's parents, No. 210 Berkeley Place, which was attended by relatives and intimate friends. The bride and groom received under a canopy of roses and smilax, and the house was decorated with pink blossoms and foliage.

The bride is one of the most charming of the young society women of Brooklyn, and the groom is also well known in society circles. He is a member of the Germania, Riding and Driving and Crescent Athletic Clubs. He is also a member of the Crescent Quartette.

Kilmer Mfg. Co. Receivership.

The plant of the Kilmer Mfg. Co., Newburgh, N, Y., is in the hands of receivers. Frank H. Cassedy has been selected as the Newburgh representative and Charles R. Flint will look out for the New York end. The application for a receivership was not forced upon the company through lack of business. On the contrary, an overplus of business is what brought them to temporary embarrassment. Raw material costs money, employees require pay weekly, running expenses are heavy, freightage must be paid cash. The greater the business done the greater the expenditure. Mr. Cassedy does not think the changed condition of things will materially affect the workmen. The first money that comes into their hands, from whatever source, will be applied to the liquidating of indebtedness to the employees. It is thought that the receivership will only be a temporary one.

Zucker & Levett & Loeb Co.

At the annual meeting of the Zucker & Levett & Loeb Co., Nos. 526 to 530 W. 25th Street, New York, held on October 30th, Charles Loeb was duly elected president; William R. W. Hentz, vice-president; Walter L. Loeb, secretary, and Harry L. Haas, treasurer. The former president, Alexander Levett, has no further connection with the management of the business. The company have in course of compilation a handsome catalogue of about 200 pages. It will be ready for distribution in a few weeks, and it will contain information concerning plating that has never been printed before. The business of the firm is in a flourishing condition. Zucker & Levett & Loeb are of the leaders in their line in the universe.

New York Hardware Jobbers.

The seventh annual meeting of the New York State Association of Hardware Jobbers was held at Syracuse, N. Y., on October 29th. The meeting was called to order at 11:30 o'clock by Hobart Weed of Buffalo, the newly elected president chosen at a special meeting held some time ago in Rochester. The two sessions of the day, morning and afternoon, were private. Members of the association from all parts of the State to the number of about thirty were present, and the time was spent very advantageously in the interchange of ideas and a discussion upon the markets and business methods. The credit system was among the subjects which was discussed. Upon this subject a very interesting paper was read by J. W. Black of the firm of Burhans & Black, of Syracuse. The reading of this paper was followed by a very spirited discussion in which nearly every member present took part. Remarks were also made by H. C. Mandeville of Elmira.

At the close of the business session an elaborate dinner was tendered the guests at the Yates. Besides the members of the association, there were present at the dinner George N. Crouse and Robert McCarthy of Syracuse, as honorary guests. J. W. Black acted as toastmaster. The tables were very elaborately laden with vases of flowers, while a tower of luscious fruit served as a centerpiece. After the several courses had been served the guests listened to a number of very interesting after-dinner speeches.

George E. Dana of Utica, a representative of the oldest Hardware house in the State, was among the speakers. He said that he was glad that the Hardwaremen of the State are coming closer together year by year, and attributed it largely to the fraternal relations which the association had nourished. Other speakers were: C. W. Tillinghast, 2d, of Troy; Mr. Boucher, of Rochester; S. J. Weaver, of Rochester, secretary of the State Jobbers' Association, and Eugene McCarthy, Harry Kennedy and George N. Crouse.

Allerton-Clarke Co.'s New Location.

The Allerton-Clarke Co., No. 83 Reade Street, will shortly remove to the quarters recently occupied by the C. F. Guyon Co., No. 97 Chambers Street. Mr. Clarke, when seen by a representative of HARDWARE, said that owing to the increase in the file business, and the fact that the company had taken the agency for the Lockwood Mfg. Co., the change was necessary, as the premises on Reade Street were not commodious enough, and Chambers Street being essentially the Hardware street, it was quite desirable to move there. The store force and the traveling representatives of the late C. F. Guyon Co. will be retained in the service of the Allerton-Clarke Co., and George B. Main and Thomas W. Munroe, who served as vice-president and secretary of the C. F. Guyon Co., will also remain and be identified with the Allerton-Clarke Co., alternating as representatives on the road.

Bommer Bros.

Bommer Bros., Nos. 351-353 Jay Street, Brooklyn, N. Y., manufacturers of compound spiral spring hinges, are now offering this hinge in unpolished steel, plated to resemble plain or antique copper, or, indeed any finish on the natural surface of the steel. They say: "the commercial significance of innovation lies in the fact that, while attractive in appearance and merchantable, they can be sold at about half the cost of identically the same hinges, fully polished. On some of the leading sizes the price is much less than one-half that of the fine polished goods." It is pointed out, however, that this line is not introduced as a substitute for the fine polished hinges, which they continue to make in great variety, but for contracts where close estimates are necessary. This firm are manufacturing steel spring hinges specially adapted for wire workers and metal railing makers, in both single and double action, which are sold at regular prices. These are in 4 and 5-inch sizes, with two rivet holes in each flange, adequate space being allowed for the rivet heads. In compiling their last price-list they have simplified it greatly by leaving out many extra sizes and correspondingly increasing the range of thickness of door which their regular sizes will take. Dealers will thus be required to carry in stock fewer sizes. The firm have also put in new machinery for turning out a number of new finishes, the object being to supply their entire line of spring hinges to match any builders' Hardware made by the leading manufacturers. Their facilities now are such that any style of finishing not regularly made can be finished to order by merely designating the finish and the maker's name. Among a number of new finishes they are bringing out are sand blast on bronze, brass and steel goods. They also plate on steel to resemble antique brass, antique copper, silver, bronze and dull brass.

The Crawfords for 1896.

The Crawford Mfg. Co., Hagerstown, Md., and Nos. 70 and 72 Reade Street, New York City, will market for the season of 1896, in addition to their medium grade 28-inch and high grade 28-inch, a line of four patterns of juvenile Bicycles, namely: 24 and 26-inch drop and 24 and 26-inch diamond. They have just issued a neat and attractive advance sheet of specifications, which bears the title, "The Crawford Models for 1896." It gives all the details of the make-up of their Crawford No. 29, Crawford No. 30, Crawford No. 27, Crawford No. 28, Crawford No. 25, Crawford No. 26, Crawford No. 23 and Crawford No. 24. Those who wish to know all about a fine line of wheels should send for a copy.

As in the past, the Bigelow & Dowse Co., No. 229 Franklin Street, Boston, will continue sole agents for the Crawford bicycles.

Underhill, Clinch & Co.'s New Agency.

Underhill, Clinch & Co., No. 94 Chambers Street, New York, have made an important new connection, as the following announcement will show:

WESTPORT, CONN., Oct. 19, 1895.

To the Hardware Trade:—We have appointed Messrs. Underhill, Clinch & Co., New York, our sole agents for the distribution of the product of our factory, for all territory other than the New England States. We would respectfully request all inquiries in regard to orders and prices to be addressed to them. Yours truly,

G. W. BRADLEY'S SONS.

NEW YORK, October 19, 1895.

Gentlemen:—Having accepted the agency for Messrs. G. W. Bradley's Sons, Westport, Conn., we solicit orders for the well known goods of their manufacture. Contemplated improvements at the factory it is hoped will make it possible in the future to fill orders promptly. There have been some changes made in prices and we would be pleased to receive and answer all inquiries in regard to same.

Respectfully yours, UNDERHILL, CLINCH & CO.

At the recent meeting of the paint and oil manufacturers, held in Chicago, the following officers for the coming year were elected: President, Howard B. French, Philadelphia; vice-presidents, Wm. Strideron, Detroit; F. N. Sewell, Kansas City; secretary, D. Van Ness Person, Chicago; treasurer, W. Agge, Boston; auditor, W. T. Seaton, New Orleans.

P. Loewentraut's roller and ice skate manufactory, a brick structure at Brenner and Kent Streets, Newark, N. J., was on October 31st gutted by fire. The fire originated in the engine room and swept through the stair wells to roof. Thousands of gross of skates were destroyed, along with considerable machinery. Total loss about $25,000.

Where They Make Files.

Readers will find elsewhere in to-day's issue a full-page illustration of the four extensive plants operated and controlled by the Nicholson File Co., of Providence, R. I., devoted solely to the manufacture of Files, Rasps and kindred goods.

These plants are located as follows: The Nicholson and X. F., at Providence, R. I.; the Great Western, at Beaver Falls, Pa., and the American, at Pawtucket, R. I. The immense output of these four plants enables this company to control more than 65 per cent. of the Files and Rasps made in the United States. The plant of the Great Western File Co. at Beaver Falls, Pa., their most recent acquisition, is the largest and best equipped in this country outside of the New England States for the manufacture of Files and Rasps.

With over 3000 varieties, as shown in their World's Fair Exhibit at Chicago, for the trade to select from, and with an enormous stock always on hand to draw from, orders are filled and despatched with practically no delay whatever.

The quality of the product of this company is so well and favorably known that it is needless to expatiate on that point, it being the result of nearly thirty years' study and experience.

There could hardly be any other than a successful culmination to so long a term of persistent, untiring energy and push.

A New Hardware Association.

The procession grows larger and larger each year. Tennessee is one of the latest to keep step with Hardwaremen everywhere. On October 22nd a meeting was held at Greeneville, Tenn., at which eight firms of Hardware dealers were represented, and letters read from others who promised their support. The East Tennessee Hardware Dealers' Association was formed, and the following officers elected:

President: George E. Speck, Morristown.

Vice-president: J. W. Willis, Greeneville.

Secretary and treasurer: R. M. Rogan, Rogersville.

The next meeting will be held at Morristown on January 14, 1896, at which time it is certain that the membership will be greatly increased.

Quotations Wanted.

The Mechanical Rubber Co. (successors to the Cleveland Rubber Co.), Cleveland, Ohio, wish quotations on Hose Fittings, Clamps, Bands, Reels, Specialties, etc., for the 1896 trade.

At the recent meeting of the National Association of Agricultural Implement and Vehicle Manufacturers in Chicago, the following officers were elected for the ensuing year: President H. C. Staver; vice-presidents C. F. Hulein, E. C. Sooy, Clement Studebaker, E. P. Curtis, H. A. Cavanagh, W. W. Collier, H. M. Kinney, G. Watson French, P. A. Myers, Henry Timken, E. J. Mockford, G. H. De Golyer; secretary O. D. Frary; treasurer Christoph Hotz; executive committee O. W. Jones chairman, Frank K. Bull, James E. Deering, Colonel A. L. Conger, J. W. Stoddard, Charles H. Deere, Thomas A. Galt, W. H. Lewis, and W. H. Parlin. It was decided to hold the next meeting in Nashville, Tenn.

The Royal Carpet Lining Co., of Providence, R. I., say in their "Housekeepers' Guide in the care of Carpets," just published: First—"A stiff corn broom should never be used in sweeping, because it often tears the thread from the face of the carpets. A light or limber corn broom is best to use. We consider the Bissell Sweeper most desirable."

Protected the Rodgers Trade Mark.

A decision of interest to all whose trade marks are imitated by foreign manufacturers, was recently made in the high court of Saxony, Germany, in the case of Joseph Rodgers & Son, of England, against Otto Henkels and Walter de Hass, of Germany. The complaint made was to the effect that the defendants had imitated a trade mark, which the Rodgers' had especially used for their cutlery goods destined for export to British India, and that the defendants had used a device almost identical, for their own goods for the said market. After a full hearing of the case, the defendants were found guilty of the charge, and ordered to pay a fine. In the decision of the case, the court held: "The accused have, therefore, purposely provided their goods and their packing with a mark which is totally similar to the one belonging to and protected by the co-plaintiffs. Thereby they have interfered with the protection enjoyed by the co-plaintiffs for their Trade Mark, and have encroached upon their legal right. There is, therefore, no doubt existing about the illegality of their action. According to the admission of the accused they have put goods provided with the said Trade Mark into circulation, and offered them for sale. Both accused are, therefore, punishable for an offense against paragraph 14, etc., of the Trade Mark Protection Law."

It is reported from Cleveland, Ohio, that "one hundred million steel balls will be made by the Cleveland Machine Screw Co., of this city, before the shops are allowed a moment's rest. Fully 95,000,000 will have to be turned out to fill orders that have already been taken, and Secretary Climo figures that orders for 5,000,000 or 10,000,000 will be received in the way of 'floating business' before June 1, 1896, when the contracts must be completed. Such an output has never been known by any manufactory of balls in the world. The immense new factory of the Machine Screw Co. is located on Second Avenue near Central. There are several big buildings in the plant and the establishment is working night and day in order to fill the contracts that have been made. About 450 men are employed. The daily output is between 400,000 and 500,000 balls, or from 10,000,000 to 12.000,000 per month."

The secretary of the National Association of Manufacturers of the United States of America, E. P. Wilson, of Cincinnati, Ohio, writes as follows as to the first annual meeting of the Association: "It is now expected that the National Association of Manufacturers will meet in Chicago on the 19th of November next. The special object of the meeting is to hold the first annual convention of the Association; to take such action in the direction of forwarding the original objects for which the Association is formed, as in the wisdom of those who may be assembled in Chicago may deem most practicable and feasible."

Sargent & Co., New York, say upon a little card they are sending their friends: "November is the month when there are many calls for something to keep doors shut. Churches, schools, lodge rooms, apartment houses, first-class dwellings, stores, offices in city and country, use Sargent & Co.'s Eclipse Check and Spring. As a Hardware dealer you should get a share of this profitable business in your vicinity. If you are not posted on prices write us about it. Push the Eclipse Check and Spring during this month of November."

Rubber dealers have reason to be thankful for the prevalency of the bicycle craze. It is estimated that hundreds of tons of crude rubber, valued at $5,000,000, has been used in the manufacture of bicycle tires during the last year and a half.

CONFESSIONS OF AN UNSUCCESSFUL CLERK.--XI.

The five years of steady labor and successful results of which I have spoken in the page before, comprised the happiest period of my life. We were contented in our little home, our baby grew toward sweet girlhood, I was able to give my wife many comforts impossible before, and down in my inmost conscience I know that I was good to her and made her happy.

I thank God for this, for at the end of those five years she died.

Out of this lonesome old age that year by year creeps upon me, I look back to that time as a long gleam of sunshine followed by sudden storm—and then the solemn, shadowy, desolate night.

No, I cannot write the details of that loss. I know that I am but a shabby old man, plodding along the dead-level highway of a commonplace life; expected as a matter of business to give and take in good nature the coarse jibes of village boys and bucolic visitors; making my home in that most dosolate of all barren places in the world—a cheap boarding house—and yet in my heart there lives a sunny picture of lost days that nothing can mar or destroy. In its center I see a sweet face of a loving mother and the clustering curls of a laughing babe who holds out arms of welcome at my approach—and I shall see them until I die. And then?

To go back a little. My partner's successful excursion into practical politics by his election as sheriff, had stirred a like ambition in my own mind. I was a member of the Branch literary and debating club, and unfortunately made a hit now and then, that encouraged me to bolder things. It became easy to take part in our political gatherings, and from speaking at home it was but a step to the filling of an occasional appointment in a neighboring town; and the usual result followed. An occasional fool-friend—whose only excuse was that he meant well—would suggest that I was just the man for the lower house of the state legislalature—and in my folly I thought he was about right, and became filled with a longing to go to Columbus and prove it.

When Simon came back from Grange loaded with enconiums and freed from public cares, I tentatively broached the subject to him. He thought for a moment, shook his head and said, "Don't do it, Hank, don't do it."

"Why not?"

"Well, I don't like to advise against it much, because you might think that I had a personal aim in keeping you here in the store. That ain't it. I am willing to turn in and work if you go away, but it's bad business for a young man."

"It pays well enough."

"That ain't it. The salary may seem large from the Branch standpoint, but when you get down to Columbus you'll find that don't go far. Then it costs something to electioneer—I've been there. But that's not what I'm aiming at. You are young; have a good start in business, and are doing well. You know what's ahead of us if we work hard. My advice is: Stick to business until you get well ahead, and if there comes a time when you can indulge in politics do so. You can't afford it now. There's another thing—it's mighty demoralizing to a young man, and there are a half dozen wrecks in Grange to-day who can thank the excitement of politics for the beginning of their ruin."

"That has no special application to me."

"True enough, but there's more than one way of getting demoralized, and if you get into politics you'll find it out."

Simon's advice so impressed me that for a few weeks I kept closely to business, and made material things rather than political ambition my guiding star. But the slow and sure poison had done its work. When the time arrived for the candidate to forsake all else and go out after delegates, I found myself in the van, haunting the old roads that Simon had traveled so well, and making myself agreeable to all men.

I must confess that all this was done against my wife's advice. She had not left me then; and I consoled her with dazzling dreams of future greatness, and a promise that she should go to Columbus with me, and be a partaker of the wonderful things there in store.

I was nominated and elected; went to the State capital and found that I was one of the smallest among a lot of small men. There was, perhaps, a time when a member of a State legislature was counted a high and highly-honored official, but it has long since passed away. The senator or representative who can get home without being charged with bribery or other forms of corruption, has done well.

I was in the second winter of my first and only term, when the sudden illness of my wife called me home. I reached her in time to close her eyes and to shut out the chief light of my life with them. We placed her beside her father and mother in Weston, and our little girl found shelter for the time in my mother's house.

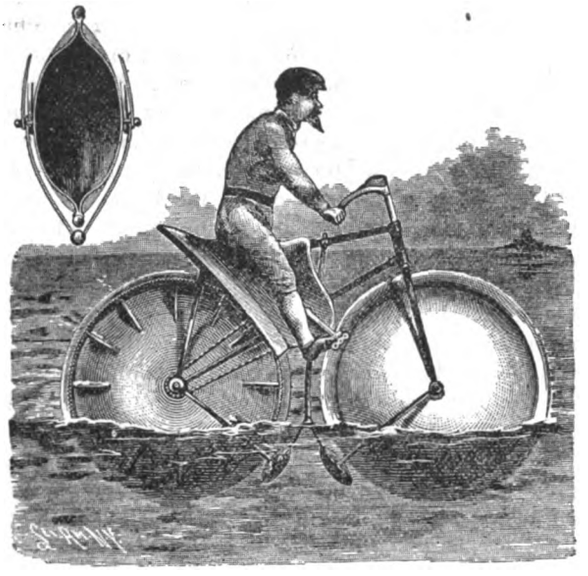
The ambition of politics and the ambition of business success, lost their power for the time. I could not go back to Branch, and made a deal by which the young Reuben purchased my share in the store. I never saw the new sign, "House & Hazledine," that went up over the old building, but they tell me it still hangs there, although Simon has passed out of life, while his partner is the chief man and the largest property holder in his section of the county. That early investment in cats was an indication of his career.

With the expiration of my term as representative, I made a half-hearted endeavor for renomination, but a vote or two I had given displeased the farmers, and they chose another man.

I do not see how much more can be profitably related. A long spell of sickness came upon me, and like a child who sees the night approaching, I was glad to creep back to my father's home, and mother's love, and to feel their tender care when there was no one else to help.

I was never strong thereafter. My present employer means to compliment me when he says, "You vas long on prains, Heinrich, but you vas short on muscles." Some way, I never had the same old ambition to do, to get; to be one in the busy throng of men. I have been called lazy—that may have been it, but I do not believe that was all of it.

I went out the next summer as agent and salesman for a Cleveland lightning rod company, and rode over the greater portion of Michigan, selling the farmers something they did not want, and that was of no use to them when they got it. I helped for a time in the store at Weston, and in odd hours took up that one last refuge of the useless—I solicited for life insurance. The little accumulation of an earlier day had gone the way of all earth during my sickness, and for the care and schooling of my little one. For some years I acted as copyist in the office of the county clerk, through the kindly influence of Mr. House. Then came a steady position as clerk in a general store down here in Eastern Ohio, and if things go well, I expect to hold on to it, and not trouble my head about better things.



My little girl is happy and useful in her own home in Grange, and the chief joy of my life is to spend two weeks each summer as her honored guest. To my grandson I am, for the time, the best and greatest man who ever lived. He will be older, and know more bye-and-bye.

Perhaps I shall be young again, and happy again, and in the presence of my heart's dearest, bye-and-bye.

A Bicycle for Land and Water.

Frenchmen of late have carried off the palm in the line of inventive genius. They are far ahead of all competitors in the production of horseless vehicles, and their latest is a Bicycle for use on land and water. The improvement has been patented by a Frenchman living in New Orleans. The illustration shows the inventor on his wonderful machine. "The wheels are preferably of copper, their side plates inclosing a large central air space, as shown in the sectional view. The rear wheel, forming the drive wheel, has on its sides lateral blades to engage the water when the bicycle is so used, and its felly is toothed to enable it to take hold of ice when the rubber tire, which is only designed for land use, is removed. To hold the bicycle upright when used in water, side weights are connected by suitable bails to the wheel axles, but when the machine is used on land these weights are raised by chains which pass through a tube depending from the frame bars, links of the chain engaging a stop or pin to hold the weights raised. The saddle of the machine is of a form designed to prevent the water from splashing up against the rider, and has at its rear end a lateral mud and water guard."

They Endorse the Ladder.

The Bicycle Step Ladder Co., No. 50 State Street, Chicago, have reason to believe that they have a very popular article in their Bicycle Step Ladder. We are permitted to quote from a few of the many letters in the same strain that they have received:

Rock & Hoffee, boots and shoes, Malvern, Ohio, in remitting for their ladder write: "The Bicycle Ladder is very satisfactory and works like a charm."

M. A. Cox & Co., shoes, Seattle, Wash.: "Enclosed find draft in payment of our bill. The Ladders are up and been used about a week. They are very satisfactory and work like a charm."

Jas. Mahoney & Co., general merchants, Greenville, Tenn.: "We herewith hand you check for amount due for our Step Ladder and truck. To say we are highly pleased with the outfit does not do the subject justice. We would not be without them for ten times their cost."

Trimble, Magill & Co., general merchants, Seymour, Mo.: "We are greatly pleased with our Ladders recently received."

Hull, Fitch & Whitacre, wholesale saddlery and Hardware, Oscaloosa, Ia.: "We enclose you herewith draft for amount of your bill in full. We want to say for your Ladder we have given it a thorough test and pronounce it first-class. No store is complete without it."

A. H. Brewer, shoes, Delphi, Ind.: "We are well pleased with the Step Ladder and would use no other kind."

Theo. H. Olsen, shoes, South Norwalk, Conn.: "My Ladders are in position, and I am more than pleased with the way they work. I have only used them four weeks thus far, but would not dispense with them for four times their cost."

Kahler & Co., the leading shoe merchants of Des Moines, in a letter to one of the leading shoe journals, writes: "We have 10 Bicycle Ladders in use and think them the best thing on earth in the way of a Ladder for a shoe store."

General Store Co., Warren, Wis.: "We enclose order for Bicycle Ladders for balance of our store. The one sent us works like a charm, and we are anxious to get the rest in."

M. Shryock & Co., general merchants, Warrensburg, Mo.: "The two Ladders complete arrived all O. K. and work very nicely. Do not see how we could possibly do without them."

A. Forney & Co., shoes, Bowling Green, Ohio: "Enclosed please find draft in payment of bill for Ladders. We have the nicest store in this part of the State, and your Ladders are a perfect match."

Keogh & Morris, boots and shoes, Quincy, Ill.: "We send you herewith draft for Ladders. We are well pleased with them and would not be without them for anything."

Geo. Rock & Son, boots and shoes, Paducah, Ky.: "We are highly pleased with our Ladders. They work like a charm."

A Hardwareman Ends His Life.

William A. Reed, a Hardware dealer doing business at No. 229 Bowery, New York, recently took his life by shooting himself at his store. The failure of the Electrical Specialty Co., of which Mr. Reed was president, and other business troubles, are supposed in a measure to have influenced the fatal action, although these difficulties were not deemed of sufficient gravity to be held wholly responsible. Mr. Reed was of a moody and foreboding temperament, and his life was to a certain extent blighted by his father's death, which was caused in the same manner as his own. He was fifty-two years old, and in 1863 found employment with Nathusias, Kugler & Morrison at the store in which he ended his life. In fifteen years he became a member of the firm, the name then being Casseber & Reed, and later Reed & Auerbacher. Mr. Reed's fortune steadily increased, and he was happily wedded, having three children by the union. He was in a bad humor over the business difficulties mentioned before, and when on the day he killed himself the cash account of the store refused to balance, his irritation increased and he declared that the error must be discovered. The error was found by Mr. Auerbacher, his partner, and Mr. Reed went home apparently much relieved. After dinner he left his home in Brooklyn, telling his family that he intended to return to the store and open a new journal. At a late hour he had not returned, and his family became alarmed, and his son William with a friend came over to the store to find him. The door was locked, and when broken open by a policeman, Mr. Reed was found dead upon the floor shot through the temple.

At a meeting of the Mechanics & Traders Exchange, No. 289 Fourth Avenue, New York, held September 3rd, an amendment to the by-laws was adopted, which provides that any person identified with the building industry desiring to avail himself only of the privileges of the floor of the Exchange and appurtenances thereto, may, on payment of $12 per annum in advance, become entitled to these privileges. A floor member has the same advantages as a regular member, excepting that he cannot vote at meetings, nor be an officer in the Exchange, nor share in any of the funds or property thereof.

BICYCLE PROPHECIES FOR 1896.

DEMOREST MFG. CO.

EDITOR HARDWARE: In reply to your letter, would say that any information we could give you on the number of bicycles that will be manufactured in America next year would be very unreliable, as it is impossible to form an approximate estimate of the number of wheels that will be turned out, owing to the fact that those asking for prices on 2000 or 3000 wheels from us ask the same question of almost every other manufacturer, and those computing the combined inquiries are liable to overestimate the number. Another thing, people asking for prices on 1000 wheels will only order 100.

We believe that the price on all good wheels will remain the same, but we think, no doubt, a lot of lower-priced stuff will be put on the market, which will be very unsatisfactory to the buyer who will be tempted by the low price to buy them.

We are beginning work on our '96 output, and expect to have a number of wheels ready by November, to catch the Christmas trade, which is becoming more and more a factor in this line of business. The man who has the '96 model ready for delivery by Christmas, we think, will get quite a good trade; as it is, we have taken orders for over 7000 for delivery in January, and will be very busy or we would like to give you an article now and again, but under the circumstances you will have to take the will for the deed. Believe us, we are,

Yours very truly,

DEMOREST MFG. CO.

Williamsport, Pa., October 29, 1895. Hugh McDonald.

O. J. FAXON & CO.

EDITOR HARDWARE: Replying to your favor of recent date, would say that in our estimation the number of bicycles manufactured in America for the season of 1895 was on or about 500,000, but in '96 we think the output will be about one million. The number of sales that are in the market for the Hardware trade we should judge about one-third of this number. The price in general will be about the same as in the past, but we do not think that the bicycle industry will be overdone owing to the lack of high class automatic machinery. We will make a specialty of the Hardware trade this season, as we have been many years in the "swim." Yours very truly,

Boston, October 18, 1895. O. J. FAXON & CO.

EDW. K. TRYON, JR. & CO.

EDITOR HARDWARE: In reply to yours, we make the following replies to your questions asked therein:

As close as we can judge, the product of bicycles for 1895 will be between 500,000 and 750,000. We think had there been an ample supply of parts the number would have reached 1,000,000, but this scarcity of parts has reduced it considerably.

We think, owing to the increased facilities and the early start in the manufacture of bicycles for 1896, that there will be fully 1,000,000 manufactured next year.

As to the question of over-production, of course this might occur, but judging from last season we think it is a good way off. We anticipated this over-production at both Cycle Shows last year; in fact, all the exhibitors thought it would occur about June, but it proved to be the reverse. If the manufacturers can procure the parts at the beginning of the season, there will be an over-production, but we have our doubts as to whether the market can produce sufficient parts for wheels to be manufactured in excess of the wants.

The manufacturers of bicycles cannot very well reduce the price of their wheels in 1896. Many of them are making cheaper grades; but the material has been cheapened in order to meet the price. Bicycles with a standard reputation will not be reduced any in price, as materials to-day cost more, and labor is also advancing very rapidly. The retail price of bicycles now is about what we would call right, and is within the means of every person who is inclined to purchase.

Now, in reference to where the wheels are marketed, we might say that quite a number of our agents are Hardware dealers, and although this class of trade has been slow to take up the bicycle business, yet they are beginning to realize that it is part of their business, and are taking hold of it much more readily than they did. The same thing applies to carriage dealers and jobbers. We can remember an instance where the individual rider had absolute control of the sale of almost all the bicycles, but the jobbers taking hold of the bicycle business is fast placing it in the hands of responsible and legitimate parties. This they have succeeded in doing, and to-day the bicycle business is in the hands of dealers instead of individual riders without standing, as it was originally.

Yours truly,

Philadelphia, October 11, 1895. E. K. TRYON, JR. & CO.

INDIANA NOVELTY MFG. CO.

EDITOR HARDWARE: We have noted with interest your estimates as to the Bicycle production for 1896. We think that we are in position to make a good guess on this subject, for the reason that we are the largest wood rim makers in the country. We are confident that the product will reach fully 1,000,000 in 1896, and judge this from the orders placed with us.

INDIANA NOVELTY MFG. CO.,
Geo. H. Thayer, Jr., Secretary.

Plymouth, Ind., October 26, 1895.

A. W. GUMP & CO.

EDITOR HARDWARE: We have yours of the 5th and note your inquiry concerning the bicycle output for 1896. While we, ourselves, are not manufacturers, we are hardly in position to give you the information desired, although from our past experience and our knowledge of the bicycle business, we think there will be manufactured during the season of 1896, between 500,000 and 600,000 machines. We should judge from 350,000 to 400,000 machines were manufactured during the season of 1895, and about one-half of this amount was marketed by the Hardware trade. Net prices for the season of 1896 will be about the same as 1895.

Trusting the above will be satisfactory to you, we remain,

Dayton, Ohio, October 7, 1895. A. W. GUMP & CO.

CRIBB CARRIAGE CO.

EDITOR HARDWARE: Replying to your favor of the 5th, with reference to the bicycle trade for the coming season, it is our opinion that there will be 750,000 wheels manufactured in the market for the season of 1896. We estimate that there were between 500,000 and 600,000 during the past season of 1895.

In regard to the number of wheels marketed by the Hardware trade last year, we could not give you any reliable estimate as our sales were made mostly through agricultural dealers.

In regard to prices, there is no question that high grade wheels will cost more to build, as the material used in their construction has advanced considerably. While they will not cost consumers any more, the manufacturers will have to be satisfied with a small profit, especially those who build them in large quantities.

There will, no doubt, be a reduction in the cheaper grade

Digitized by Google

of wheels owing to the increased demand for them and the better facilities to turn them out in quantities.

Very respectfully yours,

Milwaukee, Wis., October 7, 1895. CRIBB CARRIAGE CO.

PALMER PNEUMATIC TIRE CO.

EDITOR HARDWARE: We are duly in receipt of your favor, but not being in the bicycle business, we cannot give any information upon many of the questions in your letter. In regard to the number of bicycles that will be manufactured in the United States the coming season, we have been advised that the number will reach one million, and from the business we are getting for 1896 deliveries, we do not consider the estimate an extravagant one.

Yours very truly,

Chicago, October 10, 1895. PALMER PNEUMATIC TIRE CO.

ARIEL CYCLE MFG. CO.

EDITOR HARDWARE: Yours of the 5th inst. is at hand. In reply will say that we have no means of knowing how many wheels were manufactured the past year, and have not ventured upon any estimate of the number to be made next season. Ours is a comparatively small factory, making a very high grade article. Our sales for 1895 were between three and four thousand, but we expect to increase this to five or six next year, and already have over half our product sold. We are not anticipating any decline in prices for high grade wheels, and it does not seem that the industry will be overdone next year. In proof of this will say that we have no traveling men soliciting orders, and where contracts have been made, have been made from the office at practically the same prices as last year, and in some cases better.

Yours very truly,

ARIEL CYCLE MFG. CO.

Goshen, Ind., October 11, 1895. E. W. Hawks, Secretary.

Oliver Ames.

Ex-Governor of Massachusetts, Oliver Ames, passed away after a lingering illness at his home in North Easton, Mass., in his sixty-fifth year. Mr. Ames was prominently associated with the financial and railroad worlds, and his career as a politician in Massachusetts was particularly bright, he having served as State Senator, Lieutenant-Governor, and later as Governor. He took a decided stand against the McKinley tariff law. Early in life Mr. Ames learned the art of making shovels in his father's factory, and being of an inventive turn of mind, he patented several processes that simplified the work and lessened the cost of production. He also enlisted in the State militia, reaching the rank of lieutenant-colonel. As a private citizen Mr. Ames was of a generous and lovable disposition, giving largely to charities and respecting the religious and political views of others. He was married in 1860 and his wife and six children survive him.

Sootene Scores Again.

Edmund V. Salaman, of London, England, has been here during the past two weeks for the purpose of concluding arrangements for the representation in the United Kingdom of some of our leading manufacturers. Mr. Salaman was appointed London manager to Lever Bros., Limited, of Port Sunlight, on the first introduction of their now world-famed Sunlight Soap to the market, and later on the management of their Continental trade was also entrusted to him. He has lately resigned his appointment with them in order to create a business of his own as manufacturers' agent. The Sootene Co. of New York have entered into an agreement with him for the introduction of their product into Europe. In Mr. Salaman's hands, with his well-known skill and energy, and his large experience, the success of Sootene abroad is practically assured.

HARDWARE is printed for men now on earth.

As to Bicycle Guarantees.

EDITOR HARDWARE: I note in your issue of October 10th, questions asked some of the manufacturers of bicycles, and some of their replies, giving estimates as to the number of wheels which will be made in 1896, opinion as to prices, over-production, etc., etc.

I notice that one of the manufacturers goes beyond the questions asked, and gives the Hardware dealer some information as follows: "The bright, far-seeing Hardware dealer will buy his bicycles direct from the maker, and handle them under the maker's name, even if he is obliged to pay a slight advance over the jobber's price on an unknown product. Manufactured possibly by a maker who has never had any experience in the business, as makers who have had experience do not have to sell their wheels to jobbers under other names than their own. The main object in selling wheels without the name of the maker, is to avoid a guarantee, and this is just the point that Hardware dealers should look to, and take careful pains that he gets good goods direct from the maker at least with the maker's name on them."

This information will probably give the Hardware dealer to understand that the wholesale houses from whom he has been buying his goods for probably twenty years are irresponsible, and trying to sell them something in the line of a bicycle under their own name that is made by a new and inexperienced maker, and is not guaranteed.

The facts are, some of our best manufacturers now sell jobbers only, and every Hardware dealer will readily admit that a wheel bought from a jobber has a double guarantee, that of the manufacturer to the jobber and the jobber to the dealer. In this way the jobbers selling him other lines of goods is obliged to see that a good liberal guarantee is not only given, but lived up to, and a jobber buying a large number of wheels can get a more liberal guarantee than a retailer, and more concessions which would not be considered by a factory selling a small dealer.

Again, any wholesale Hardware house knows that they can buy goods closer when not to be sold under the maker's name, on which so much money is spent for advertising, thus enabling him to sell the same bicycle cheaper than otherwise.

The jobber should be a good judge of bicycles if he is competent to run a business, and he is not to be credited with placing his name on an inferior article.

As a rule, it is advantageous to the Hardware dealer to buy from the jobber who has a good line of wheels, including juvenile, cheap, medium and high grades, for in buying from one house he can place larger orders and get better prices, bunch shipments and save freight, also get better accommodations and treatment than by buying from three or four different houses.

Trusting I have not intruded on too much of your valuable space, I have the honor of remaining,

Yours very truly, A READER.

October 21, 1895.

J. W. Shipman & Co., South Boston, Va., have discontinued business at that point, and removed elsewhere. R. A. Penick & Son, wholesale and retail Hardware, plows and castings, at the same place, report the business far more active than ever before known at this season of the year, and that the outlook is very flattering. They have recently gone into the wholesale business in their line, and would be glad to receive price-lists, catalogues, etc.

Two and one-sixth pounds of 24-carat gold, in the form of the Morgan & Wright slab, will go to W. W. Hamilton, of Denver, Col., unless some one betters his unpaced mile in 2:05 2-5. He made this time a few days ago on a "Syracuse" at Denver.

Digitized by Google

Comments on "Hardware's" Figures.

The Cleveland (Ohio), *Leader* in a recent issue comments as follows on the bicycle figures recently collected by HARDWARE:

"The trade journal, HARDWARE, has been getting the opinion of leading manufacturers of bicycles concerning the number of 'wheels' that will be made and sold in this country next year. The estimates vary a good deal, but they show beyond doubt that the business will reach immense proportions, and that more money will be spent for bicycles in 1896 than in any other year since the first old-fashioned high wheels were made.

"The figures given by the different authorities consulted by HARDWARE, range all the way from 600,000 to 1,000,000. The weight of evidence seems to be in favor of an output of about 750,000 bicycles. That will be an increase of, say, 300,000 over the work of the 'bike' factories this year, and it will not fall very short of increasing the number of bicycles in use by fifty per cent. It is clear that the making and riding of wheels is to go on in 1896 at a rate never before known in the United States.

"The general opinion is that there will be little or no change next season in the price of bicycles. The machines are selling so well to dealers, at good rates, that the manufacturers have no reason for cutting prices materially, and the retailers will hardly lower their prices as long as they have to pay as much for their wheels as they have been obliged to in 1895. It is believed by both manufacturers and dealers that the demand will be altogether the best ever known, and that there will be no trouble about selling bicycles at good figures. If the prices at which wheels sell next season should be held at about the same level that has been maintained during the year now closing, the average cost to the consumers of the 750,000 bicycles which are to be put on the market may be estimated at about $50,000,000. It is not likely to fall much under that limit. Certainly $40,000,000 is an inside figure for the lowest possible cost of the bicycles which will be sold in 1896.

"That sum is big enough to make a very material difference in the other expenditures of the people who will use their money for bicycles. Most of the men and women who will purchase the new wheels of '96 will be persons of moderate income, to whom the $50 or $100 that a bicycle costs means a good deal of money. They will naturally save in other directions, and it is not strange that the tobacco manufacturers complain of a serious loss of patronage as a result of the great and growing popularity of bicycles. The livery stable keepers are in the same boat, and the horse-breeders, the carriage manufacturers, and the proprietors of various places of amusement all suffer more or less.

"It is not a question of economy alone. The enthusiastic riders of bicycles begrudge the time which it would take to patronize many of the business men who formerly profited by their trade. They haven't time to smoke so much as they formerly did, and the use of horses and buggies does not tempt them at all. Excursions by train or boat do not invite them as such outings did before they began to ride their beloved 'bikes.' So the bicycle strikes at the prosperity of various enterprises with more force than it would if its cost were the only factor to be taken into account. Its influence upon trade and industry cannot be fully estimated merely by the absorption in wheels of enough money, in a single year, to buy 10,000 houses and lots worth $5000 apiece, or 200,000 horses and buggies at an average price of $250. Meanwhile, not only the makers and sellers of bicycles, but the keepers of roadside inns, the gum manufacturers, and, perhaps, the surgeons, find in the immense popularity of the bicycle just what they have been looking for to tone up business these many years. But if the men who set fractured bones have cause to thank the bicycle for custom, it is not so with the doctors whose specialty is dyspepsia. The riders of wheels eat, drink, and are merry, and there is nothing to show that they die to-morrow any more than other people."

The Lovell Bicycles.

The John P. Lovell Arms Co., Boston, have issued, under date of October 22nd, a letter to their agents, in which they say: "Realizing that the call for our Lovell bicycles has been steadily increasing, and finding, during past seasons, that it has been impossible for us to have manufactured a sufficient quantity of wheels to supply this demand, with the facilities then at our command, some important and decisive action on our part was necessary, in order that we ourselves might directly meet the wants of our trade. With this end in view, after careful consideration, we decided to increase our facilities, and, early in the season, we purchased and equipped a new plant, supplying it with all the latest modern machinery, tools, etc., thus making it possible for us to manufacture our bicycles under our own personal supervision, and in such quantities as will enable us to serve our agents with the promptness and attention they justly deserve. Our production will consist of the famous Lovell Diamond and Excel wheels, comprising a complete line of ladies' and gents', boys' and girls', which will enable you to supply the needs of your trade. Advance lists, particulars, terms, etc., will be ready shortly and will be furnished upon application."

How Mrs. Wm. Henry Makes Money.

"I have been so successful in the past few months that I feel it my duty to aid others by giving them my experience. I have not made less than $18 any day for the last five months, and have not canvassed any. I put a notice in the papers that I am selling the Iron City Dish Washer, and people send for them by the dozen. They give such good satisfaction that every family wants one. Dishes washed and dried in two minutes. I think any person can easily clear $10 a day, and double that after they get started good. I don't see why anyone should be destitute, when they may just as well be making lots of money if they try. Address the Iron City Dish Washer Co., No. 145 South Highland Avenue, Station A, Pittsburg, and they will give you all instructions and testimonials necessary to succeed." *Southern Christian Advocate.*

Increase of Lufkin Rule Plant.

The Lufkin Rule Co., Saginaw, Mich., on account of their increased and growing business, have been compelled to increase their capacity, and have just let a contract for a large brick addition to their factory. The trade evidently appreciate the efforts of American manufacturers who try to make, and succeed, in making goods that are superior to foreign goods. The new line of Metallic Tapes that they have put on the market is finding ready sale along with their large line of Steel Tapes. Their Eastern trade has especially increased on account of their carrying a full line of goods at their New York store, No. 2½ Murray Street, which is in charge of H. G. Hollis, and from where they are enabled to serve Eastern customers very promptly.

A valuable mica mine has been discovered on Kettle River, St. Louis County, Minn. The locators are W. R. Miller, of Biwabik, and P. H. Tetrault and James Flinty, of Ironwood, Mich. The vein is embedded in sandstone and granite walls and gives promise of an exceptionally rich find. The work of development is being pushed, and already specimens are being mined in which the sheets will measure six by eight inches. A company has been organized and the necessary capital forthcoming. The owners of the mines have made arrangements in Chicago for a market for all their product.

RECENT TRADE PUBLICATIONS.

The Magnolia Metal Co., No. 74 Cortlandt Street, New York, have gotten out a handsome publication fully describing the merits of their famous products, Magnolia Anti-Friction Metal and Camelia Bronze Journal Bearings. The cover of the catalogue is of heavy ribbed white paper, tastefully tied with a tasselled red silk cord. The manufacturers say that "the sales of Magnolia Metal for the year 1891 were about 22½ times as great as the combined sales for 1886 and 1887; and the sales for 1892 exceeded thirty times the business done during the years 1886 and 1887; and the sales for the year 1893 to 1894 were 12 per cent. greater than any like period, and from 1894 to 1895, the sales were 33⅓ per cent. greater than any previous period. These last results were attained during a period of the greatest commercial depression ever known in this country." The company further state that Magnolia Metal is adapted for steamship, railroad, dynamo, rolling mill, high speed and heavy engine, saw mill, cotton mill, paper mill, and for every other class of mechanical bearings. The following are the directions given for using the metals: Melt in a clean ladle or pot, and stir thoroughly. Do not mix with any other material. Heat the metal sufficiently to flow freely, but avoid extreme heat. When hot enough to brown a dry white pine stick, and when it trembles in the hand, it is ready for pouring. It is best to take the chill off the backing of the bearing into which the metal is to be poured, before pouring. If practicable, it would be best in pouring to have the face of the bearing down. Magnolia Metal should stand above and not be flush with its backings, and it can be peened as hard as desired, if you begin in the middle and strike the blows lightly at first, increasing the strength of the blow until the metal is sufficiently hammered. In close bearings keep snug, but do not key down too tight. The metal can be used over and over again with small loss of good qualities: but would suggest addition of fresh metal with each new melt.

P. & F. Corbin, New Britain, Conn., the well known manufacturers of Hardware, have recently published their catalogue for 1895. It is a large volume of nearly 700 pages, handsomely bound in dark brown morocco, the edges of the leaves being colored an olive green. The name of the firm is stamped upon the cover in gold letters. Accompanying the catalogue is Price List No. 1, under date of September 18, 1895, containing the prices of the goods illustrated in the catalogue. The price list is indexed by numbers, and by finding the number of the article, in the catalogue, of which the price is required, one is easily enabled to find it in the price list. The frontispiece of the catalogue shows the extensive factories of P. & F. Corbin at New Britain. On the following page is a fac-simile representation of the first catalogue issued by the firm in 1852. The illustrations, which are very numerous, combine mechanical value and artistic beauty. Some of the articles represented are as follows: Butts and hinges of almost every kind and finish, bolts in a great variety, letter box plates, in plain and ornamental designs; door bells and pulls, electric push buttons, mouth pieces for speaking tubes, catches for doors, screens, refrigerators, etc., casement fasteners, latches, door handles, locks, door pulls, push and pull plates, drawer handles and pulls, sash patterns, sash lifts, shutter hooks, bird cage and many varieties of hooks, pulleys, hand rail and shelf brackets, ornamental letters, door knockers, saw sets, match safes, liquid door springs and checks, locks, knobs, escutcheons, door plates and keys.

The Withington & Cooley Mfg. Co., Jackson, Mich., have issued and distributed an elegant illustrated catalogue, displaying their large line of farm and garden tools and implements. The company say that it is their aim to improve the grades of their goods when possible, and that they exercise a constant vigilance over material, workmanship and design, that there may be no deterioration in the quality of their products. The regular first quality steel goods are designated W. & C. grade; the seconds are designated B. Norris & Co., and the P. & W. quality of forks are a cheaper grade of goods. They further say: "Our catalogue for 1895-96 is late, but it is now here. 'Old things are passed away. All things are new.' The numbering is new, the list prices are new, the discounts are new, the telegraphic code is new, several of the tools are new, shops and machinery are largely new and some of the foremen and office staff are new; but the company and its management are old and reliable. The system of numbering is a system, instead of being made up of arbitrary numbers, and a little study of the key will enable both buyers and stock men to soon identify the goods with the numbers. They will be much easier remembered than arbitrary numbers. New tools will be found on pages 10, 17, 18, 19, 23 and 47. It will be of advantage to buyers, stockmen and salesmen, not simply to glance through the catalogue, but to study it. Our customary invitation of orders has been so largely anticipated, we have instead of it to thank our customers for those which, with their characteristic shrewdness and foresight, they have already placed with us for 1896."

The Mosely Folding Bath Tub Co., Chicago, Ill., have presented the trade with a handsome catalogue describing and illustrating their full line of products. The company say: "Our goods are the latest, improved and far in advance of anything before offered in this line. Constant study and intelligent labor, always improving upon the best, have made our goods a recognized standard article. The folding bath originated from natural progressive ideas and a demand for private baths. The Mosely folding bath tub answers fully this demand, and even more, being equally desirable for bath room or sleeping apartment. When placed in the latter, it gives the much desired private bath, with its many conceivable conveniences, in the most elaborate or plainest design. Where our goods are known, they have already gained public favor to a marked degree, which is daily increasing. The goods are being sold by our leading jobbers and sanitary supply houses, both in this city and St. Louis, such as Hibbard, Spencer Bartlett & Co., Jas. B. Clow & Son, Rumsey & Sikemeier Co., L. M. Rumsey Mfg. Co., etc." The Hardwaremen who wish to add a new line will do well to send for this catalogue.

We have at hand the twenty-seventh annual catalogue of the Philadelphia Lawn Mower Co., Philadelphia, Pa., for 1896. The cover is maroon in color, bearing the name of the company in gilt lettering. It fully describes and illustrates the well-known Philadelphia mowers, of which several new styles are shown. The company say: "We send you herewith our catalogue for 1896, and wish to state briefly a few points. While the cost of all material entering into the manufacture of our mowers is much in advance of last year, we have placed our orders for such an amount of stock as will run our factory full time up to January 1st, at nearly last year's cost, and shall not advance our prices before that date. We invite your attention to our large line of lawn mowers included in this catalogue, and we trust by careful inspection of it, you may see we are keeping abreast of the age in the many improvements, and watching with unrelaxed attention the interests of our cus-

Digitized by Google

tomers. They are constructed upon the best mechanical principles, and on account of their simplicity and superior construction, are more durable, possess more useful and valuable features, less liable to get out of order, and will do better work than any other lawn mower made. We have added to our list in the past two years several new style hand and pony mowers, making a most complete line of twelve distinct styles of hand, and seven of horse and pony mowers, adapted to all kinds of trade. Our only regret is, that owing to the increased demands for our goods during the past season, far beyond our expectations, our facilities were for a while inadequate for handling the business, but our arrangements are now so complete that there will be no cause for complaint in the future."

Joseph H. Seed, Nos. 21 and 23 Centre Street, New York, is distributing an attractive sheet in red and blue, giving the prices of and illustrating some of his specialties, which include: 4 sizes of reversible self-cleansing water filters; No. 1, skate sharpener; No. 2, scissor sharpener; No. 3, knife sharpener; No. 4, gas tip cleaner; No. 5, coat, hat and bag hanger; No. 6, towel hanger; No. 7, gentlemen's mustache curler; No. 8, ladies' curling iron; No. 10, family soldering set; No. 9, gas boiling stove, and No. 11, universal cash register. We have also received from the same source a small folder descriptive of the "Matchless" self-lighting gas burner. The maker says that "this burner is made entirely of brass, with handsome nickeled stationary globe, regulating screw for gas supply, and is of superior finish and appearance. Simple in construction, durable and strongly made, it contains all that can be desired for this style of self-lighting gas burner."

We are in receipt of the 1895–6 catalogue of the T. F. Welsh Co., Boston, Mass. The company say: "We submit our 1895–6 price-list of gears, etc., with the assurance that our goods and prices will continue to meet your approval, and with our usual promptness in filling orders, shall hope to continue to share your patronage. The enclosed price-list of gears and pulleys includes those only which we carry in stock and can therefore fill all orders promptly. The sizes of holes in gears and pulleys can be made larger (diameter of hub permitting) or smaller, as desired, at an extra cost. The catalogue is fully illustrated and indexed."

We have received from the Zenith Cycle Co., Binghamton, N. Y., a sheet announcing their '96 wheels. The company say: "We present this advance sheet to the trade, confident that although young in the business, we are destined to be on top; hence we have chosen the name 'Zenith,' the highest point. We wish to call your particular attention to a few of our new, and we think, meritorious points, viz.: large tubing, large hubs, large balls, tool steel dust-proof bearings, reversible handle-bar and easily detached cranks, with material the best and workmanship the finest."

Wilson Bros., Easton, Pa., are announcing their Grinding Mills in a neat little catalogue to the trade. These mills are designed to grind shells, corn, bones, old crockery, gravel, stones and other substances that enter into the composition of egg foods for poultry. The company also manufacture clover cutters, meat cutters, corn shellers and steam engines and boilers. The catalogue contains valuable information to poultry raisers, giving several recipes for egg foods and interesting notes on fertilizers, which should be appreciated by agriculturists.

The Fox Machine Co., Grand Rapids, Mich., are in the field with a fall announcement for the bicycle department. The company, in referring to their machine, say: "The Famous Fox is a title justly earned. It is gracefully proportioned, staunchly constructed, beautifully finished and extravagantly equipped. We have spared neither time or money to make the 'Fox' the most superb and, at the same time, the most practical bicycle yet produced. Have we succeeded? Ask the riders of the Fox."

"Pointed Suggestions" is the title of a handsomely illustrated booklet published by Gara, McGinley & Co., Philadelphia, tin, slate and tile roofers and architectural sheet metal workers. It is pointed out by the company that their catalogue contains pointed suggestions and is full of valuable information for the house-owner; also hints as to the proper material, construction and care of the roof, and setting forth facts unmistakable of the art and utility of sheet metal.

F. E. Kohler & Co., Canton, Ohio, are distributing a neat booklet illustrating their large line of Hardware specialties, among which may be found anti-rattlers, bread and cake knives, can openers, curry combs, hose menders, kettle cleaners, lawn sprinklers, posthole diggers, pruning shears, planters, rakes, saw sets, snow shovels, trowels, tree protectors and vegetable washers.

The Marlin Fire Arms Co., New Haven, Conn., have recently favored us with an advance copy of their 1895 catalogue. The cover is of dark green, bearing in raised gilt letters the name of the company. It is profusely illustrated and contains comprehensive descriptions of the new forms of smokeless ammunition.

We have lately received from the Enterprise Mfg. Co., Columbus, Ohio, two catalogues, one on saw mills, engines, etc., the other on steam rollers. Both of these publications are nicely illustrated, and are gotten up in an attractive manner and teem with valuable hints to those interested in this class of machinery.

The Wagner Mfg. Co., Sidney, Ohio, have published a folder describing and giving the prices of their polished and nickel-plated hollow ware, which includes sugar kettles, tea kettles, broilers, gem pans, flop griddle pans, boilers, cast mauls, ventilator grates, etc., etc.

We have at hand the "blue book" issued by the Union Heater Supply Co., Detroit, Mich. The little publication fully describes and illustrates the various manufactures of the company, which include fire pots, paint burners for removing old paint, gasoline forges, brazers, etc., etc.

William Lyman, Middlefield, Conn., publishes an interesting and concise pamphlet on sights and rifles. It is doubtless of great value to sportsmen, as it contains explicit directions for fixing sights on rifles and shotguns, and much of interest to shooters in general.

"There's Something In It" is the title of a neat little circular that the National Cycle Mfg. Co., Bay City, Mich., are sending to the trade. It is a very attractive announcement, and fairly bristles with advice to dealers and facts about the National.

The Meriden Britannia Co., Meriden, Conn., have issued a handsome sheet describing their silver-plated toilet ware. A handsome illustration shows an assortment of hair brushes, combs, whisk brooms, etc., etc.

The Folsom Snow Guard Co., No. 178 Devonshire Street, Boston, have issued a handsome leaflet illustrating and describing their goods, and the methods of application.

McKee & Harrington, Nos. 173–179 Grand Street, New York, are distributing a folder, which gives fifteen reasons why you should buy the Lyndhurst.

The Anglo-American Cycle Fittings Co., Nos. 105 and 107 Chambers Street, New York, successors to the Anglo-American Iron & Metal Co., are sending the trade a neat and comprehensive catalogue on everything pertaining to cycle manufacture and repair.

A New Pipe Threading Machine.

Curtis & Curtis, Bridgeport, Conn., manufacturers of all classes of Pipe Cutting and Threading Machinery, have recently brought out and placed on the market a new design of their Forbes' Patent Die Stock, which is remarkable from the fact that it is probably the largest hand die stock ever built. It is called the No. 3 D. Hand Machine, and cuts off and threads all sizes of wrought iron pipe from 2½ to 8-inch right hand. So perfect is their system of gearing that even 8-inch pipe can be cut off and threaded by a strong boy, and nearly as quickly as with a power machine. The cut which we show herewith gives a good idea of the general appearance of the machine. The pipe is inserted from the back of the machine, and is clamped by the self-centering vise attached to the machine. As the large die-carrying gear is revolved in the shell by a small pinion imbedded in the side of the shell, it is drawn towards the end of the pipe by a lead screw on its back, and the dies are thus fed to the pipe. When the required length of thread is obtained, the dies are thrown back and the pipe taken out without running back over the thread. Only three sets of dies are used for the full range of the machine, and they are all made opening and adjustable to any variations of the fittings. The machine is also arranged to cut off all sizes of pipe within its range. Experience has shown that it is much more economical to use a portable pipe machine, which can be carried from place to place and the work done on the spot, than to try to cut the pipe to measurements at a distance. For not only is there much less chance of mistakes, but much time, delay and carting saved. This machine is also fitted, when desired, with a power base and countershaft. It can then be used either as a power machine in the shop, or taken from its base and carried out on a job as a hand machine.

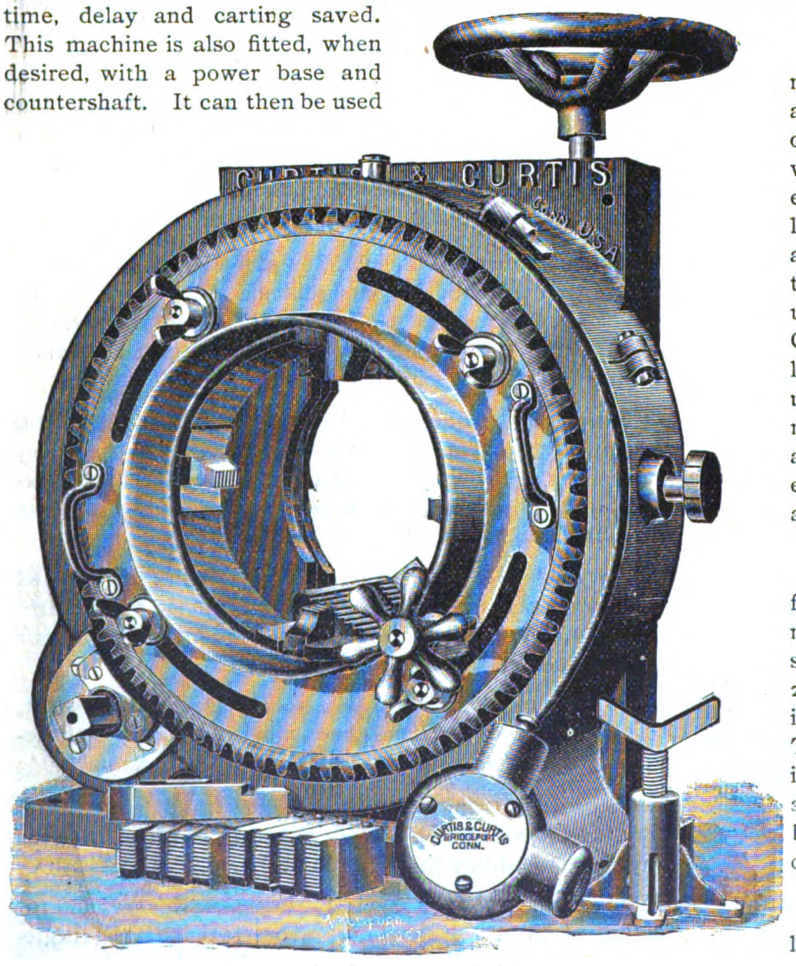

FIG. 1. NEW FORBES DIE STOCK.

A water telescope has been manufactured by the Ashland Hardware Co., Ashland, Wis., with which to search for the remains of a drowned man. The telescope is a funnel-shaped tube of tin ten feet in length, four inches across one end and one a fourth inches across the other with a glass across the other end to keep the water out. A person in the boat can insert the telescope fully nine feet into the water and can plainly see the bottom at quite a depth. Several years ago when the ore boat *Lucerne* foundered a water telescope was used in locating the wreck and valuables that went down. The Ashland Hardware Co. also made one last summer for a man who had lost his watch in the bay. A similar instrument is used in searching for coral. Even though the water may be muddy the concentration of light through a ten-foot tunnel makes things quite clear. By even chopping a hole in the ice one can see quite a depth in the water.

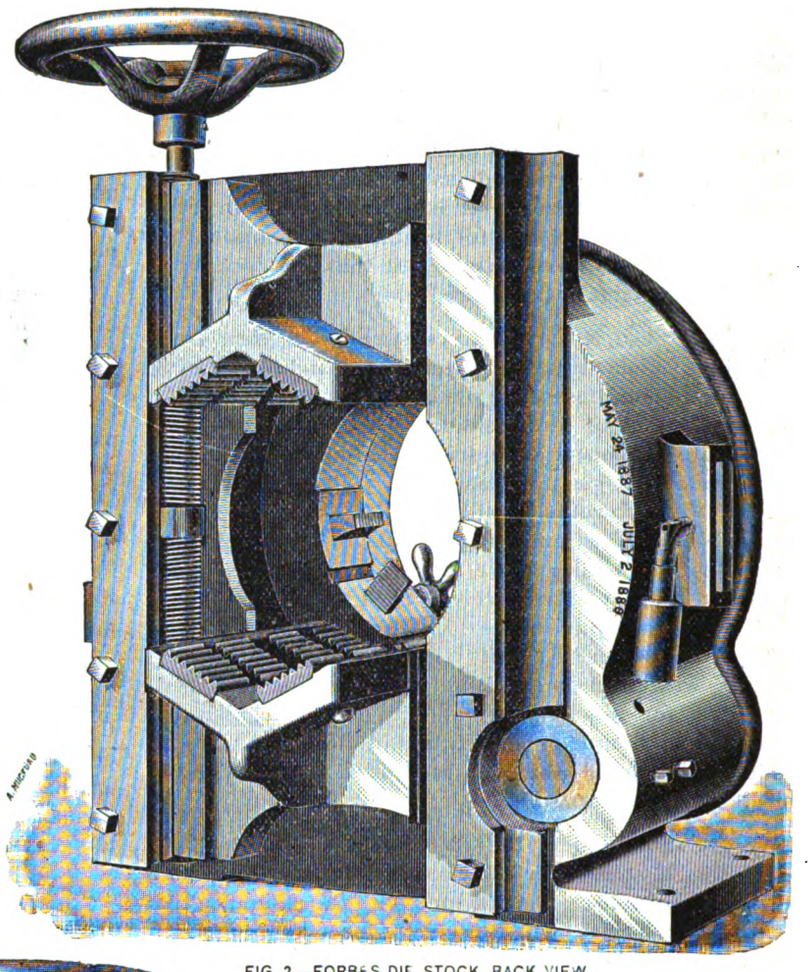

FIG. 2.—FORBES DIE STOCK, BACK VIEW.

The Berlin Iron Bridge Co. have lately completed for Wilmot & Hobbs, of Bridgeport, Conn., a new rolling mill to take the place of the one lately destroyed by fire. The main mill is 126 feet wide and 200 feet long with engine and boiler room attached in a separate wing, 54 feet wide by 90 feet long. The construction is entirely fireproof, no wood being used about the building, so the risk from fire is absolutely eliminated. The roof covering is the Berlin Iron Bridge Co.'s patent anti-condensation corrugated iron.

The shooting tournament of the Dupont Smokeless Powder Co., was recently held under the auspices of the Baltimore Shooting Association. The magnificent trophy presented by the company was won by Fred. Gilbert of Spirit Lake, Ia.

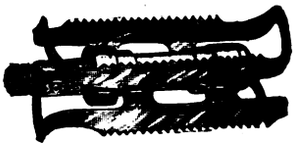
ILLUSTRATED BICYCLE NOVELTIES.



MANUFACTURERS and DEALERS are invited to make FREQUENT USE of these columns.

Anything NEW in BICYCLES or BICYCLE NOVELTIES should be sent us immediately. NO CHARGE, direct or indirect, is made, as our interest lies in SHOWING THE HARDWAREMAN what is going on in THE BICYCLING WORLD.

When your NOVELTY is ready, send us an Electrotype and descriptive matter, which will appear immediately.

The Snell Canoe Pedal for '96.

The Snell Cycle Fittings Co., Toledo, Ohio, have recently placed upon the market a Canoe Pedal for the coming

season, as represented in the illustration. The rat trap plates consist of two pieces stamped out of solid sheet metal, turned up at the ends canoe shaped and securely riveted together. The ball bearings are referred to as including the latest improvements, cups and cones as accurately made and properly hardened, and as being readily oiled and easy adjusted. The manufacturers state that the pedal is especially designed and scientifically constructed with a view to lightness and strength, and that it is absolutely dust proof.

The Zenith Cycle Saddle.

The accompanying illustrations show the Zenith Cycle Saddle placed on the market by the Zenith Cycle Saddle Co., Disston Building, Front and Laurel Streets, Philadelphia. In Fig. 1 the saddle is shown complete, and Fig. 2 illustrates

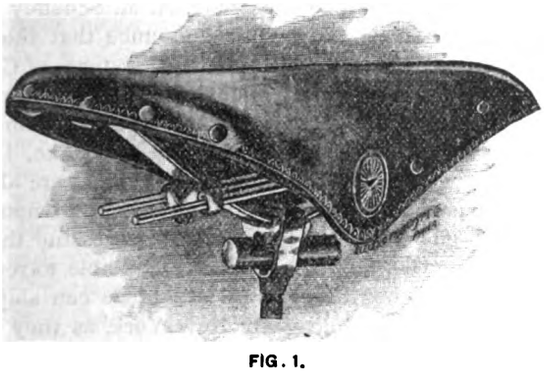


FIG. 1.

the principle of construction. No. 1 represents a U-shape spring made of tempered steel wire; No. 2 is the center bearing or swivel point of the U-spring attached to the main spring No. 5, for taking sag out of the saddle; No. 3 is an adjustable tension dog movable on the main spring, and No. 4 is the cantle hole. It is explained that the saddle may be set at any angle desired, and adjusted so that a rider may have either a hard or a soft saddle in a few seconds, without removing the saddle. If a hard saddle is desired the nut on the tension dog, No. 3, is unscrewed, and the said dog slid toward the cantle until the proper tension is obtained, when

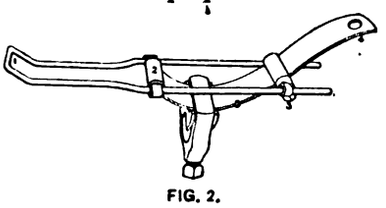

FIG. 2.

the nut is again tightened. If a soft saddle is wanted the dog is slid toward the cantle bearing and the nut tightened when the desired tension is obtained. The saddle is described as being built upon entirely new principles and is guaranteed by the makers against sagging. The saddle is made in four sizes, in weights from 16 to 24 ounces, with the leather cut lengthwise of the grain, and having full nickeled working parts.

Combination Bicycle Cleaning Rack and Holder.

Parkhurst & Wilkinson, Chicago, as selling agents for the Rochester Bicycle Combination Holder Co., are introducing the Combination Bicycle Cleaning Rack and Holder as here

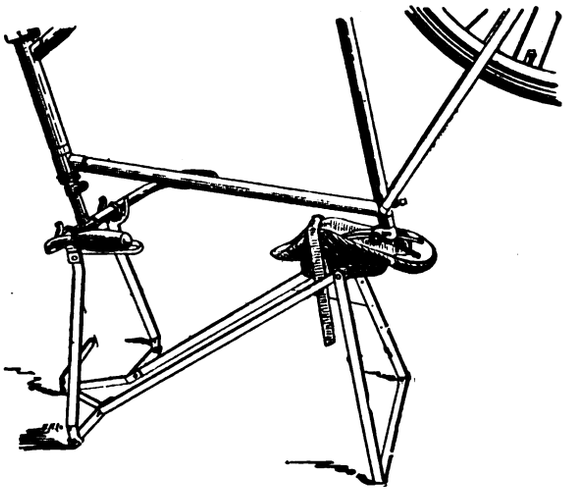

FIG. 1.

illustrated. The holder is designed for the use of those who own bicycles, and folds up flat when not in use, weighing 6 pounds. It is explained that the spread is between the handle bars and the saddle, thereby adjusting itself to any length of bar. The saddle base is pivoted and is adjustable to any size tire when holding the wheel in an upright position as in Fig. 2. It is stated that the wheel is held rigid in either position, and that when taking the wheel off while in the inverted position, Fig. 1, it leaves the holder ready to receive the wheel in an upright position, Fig. 2, with the exception of turning the saddle base, as illustrated. The strap that holds the saddle is a self-tightening buckle, it is stated, so that when once fitted to the saddle it needs no further adjustment, as the nose of the

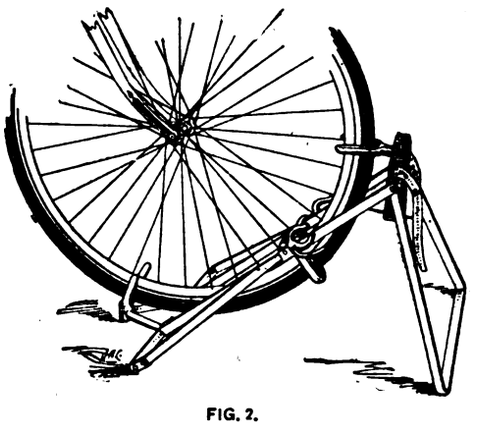

FIG. 2.

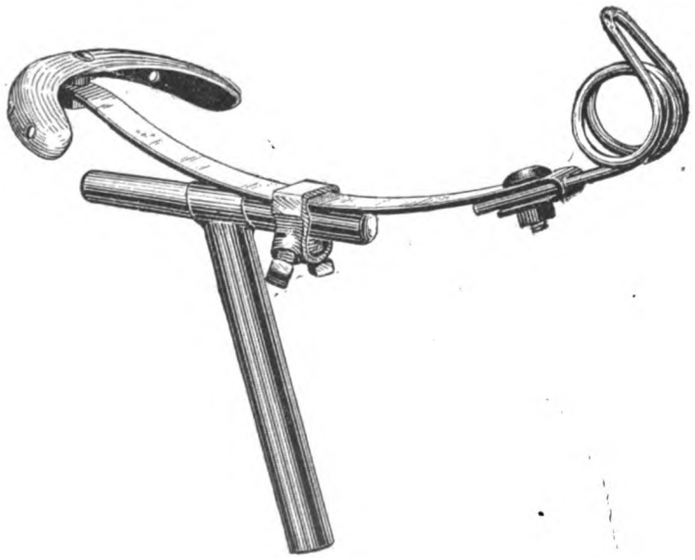
saddle goes just far enough to make the grip secure. The following claims are made for the holder: That it saves the wheel, facilitates cleaning, renders adjusting and repairing easy, economizes time, saves paint on house or porch and enamel and nickel on the wheel, and also, that it is handsome, neat, light and adjustable.

The Phillips Wheel.

The Phillips Mfg. Co., New York City, who make the Phillips Wheel, have a new idea in motor bicycles. Their circular describes it as follows: "Our motor consists of two radius-beams, fulcrumed, one on either side, to the rear of the frame. From the forward ends of these beams arms

Digitized by Google



extend downward, to which the pedals are attached. At the angles formed by the radius-beams and the pedal arms driving-rods connect with the cranks. The cranks are placed, as in an ordinary bicycle, diametrically opposite to each other. All the bearings are ball-bearings. The effective power exerted upon the cranks is applied and distributed to the greatest advantage by the arrangement of

the parts described, in that at the beginning of the down stroke the pedal occupies a position in advance of the crank pin, and power is transmitted to the latter through the driving-rod from a point in rear of the pedal, hence greater leverage is exerted at the beginning of the stroke than if the pedal were attached directly to the crank. As the crank-pin advances the angle between the driving-rod and the radius-beam is increased, and a toggle-action is developed, which latter increases in power until the crank-pin reaches its most forward position and stands in substantially a horizontal plane. From this point the driving-rod gradually approaches the pedal and a perpendicular thrust is developed upon the crank-pin, the power diminishing as the crank-arm and driving-rod come into line, but before this occurs the opposite pedal has reached a point where it exerts effective power. Thus it will be seen that the dead centres present in the machine of the rotary type are done away with, and that effective power is constantly being applied throughout the entire revolution of the crank. In the ordinary machine effective power cannot be applied through more than two-thirds of the crank's revolutions. Not only is the effective power increased by our device, but the path traversed by the foot is shortened, being one-third less than if the pedals were applied directly to the crank."

Adjustable Bicycle Saddle.

The accompanying illustration shows the frame of an Adjustable Bicycle Saddle which W. W. Shoe, No. 428 Walnut Street, Philadelphia, is placing on the market. The adjustment feature is obtained by bending the end of the main spring until it is parallel with the main piece, and

passing the end of the coil spring through holes made in the bend clamping the whole with a large headed carriage bolt. To take up sag in a saddle the nut on bolt is unscrewed, the coil spring adjusted to suit the condition required and the nut again tightened. Another new feature on the saddle is the post bracket. The bracket is arranged for use without a wedge, and has two set screws, angularly disposed to hold the bracket and the saddle spring to the post. The advantages claimed for the new bracket are that where a wheel having a high frame is used the bracket allows the head of the post to come almost one inch nearer to the frame than is possible with a wedge bracket, and that where a T post is used the bracket may, if required, rest directly on the frame; that it weighs two ounces less than the ordinary wedge combination bracket, and that a main spring is less liable to break across the center, owing to the large bearing surface presented by the saddle post head. The makers claim that the majority of cases of broken springs are due to the abrupt edge of the wedge used in a combination wedge bracket.

The Cycle Grip.

D. H. Carpenter, Norwich, Conn., is placing on the market the Cycle Wrench here shown. It is made of crucible steel oil tempered, is nickel-plated and weighs only four ounces. It handles square or hexagonal nuts from 1⅜ inch down. The jaws are ¼ inch wide and having three grip-

ping surfaces on the sides, it keeps the angles of nuts in perfect shape. The maker states that it is the lightest and strongest wrench of its capacity and that its adjustment is instantaneous. The illustration shows the Wrench half the full size.

Will Handle the Featherstone Wheels.

In a recent circular to the trade, A. M. Scheffey & Co., No. 92 Reade Street, New York, announce that they have renewed their contract with A. Featherstone, of Chicago, "as wholesale distributing agents for their popular line of machines, which includes the famous Road King and Road Queen. The balance of the line are the Duke, Duchess and four juvenile machines. These machines are all popular in price and have a reputation second to none. No maker of bicycles has been more successful than the Featherstone Co., and we are glad to be able to represent such a sterling house. To our agents we can ship these wheels either from Chicago or New York, as they prefer. We will, of course, have our usual Wynnewood line, particulars of which will be given later. The Featherstone catalogue is in course of preparation, and parties interested can have a copy mailed by application."

The Geuder & Paeschke Mfg. Co., manufacturers of tinware, Milwaukee, Wis., report an extraordinarily large trade this fall on all the various lines manufactured by them. They have been running overtime in all departments since July, and even then have found it very difficult to keep up with their orders. They are especially gratified at the very handsome increase in the sales of their celebrated Cream City Flour Bins and Sifters, their total output of these goods now being fully three times as large as a year ago. Dealers in house-furnishing goods looking for suitable articles for the coming holiday trade, should make sure that the Cream City Bins are given a prominent place in their stock, as there is certain to be a large demand for them.

Barring unforeseen reasons, such as the supply of red paint becoming exhausted, the valve stems of the Morgan & Wright quick repair tires may be permanently identified by the fact that they are red. "Its stem is red" is a phrase with which the company intend cyclists shall become familiar.

NEW GOODS IN THE MARKET.

If you have anything NEW, let the world know it by illustrating it in these columns.

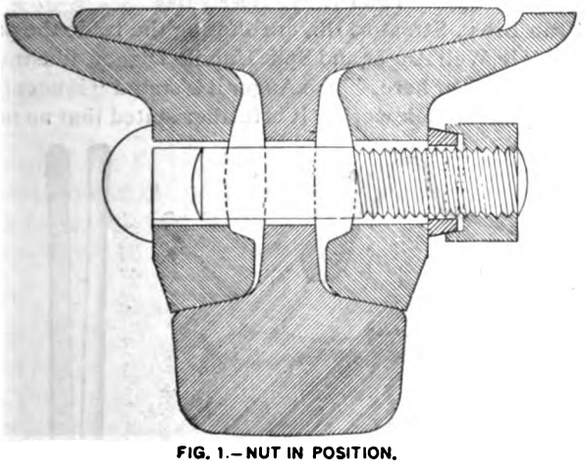
NO CHARGE WHATEVER is made, direct or indirect, as our interest lies in showing the readers of "HARDWARE" where the LIVE manufacturers and wholesalers are, and what they are doing.

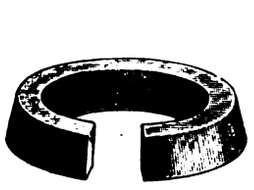
When your NOVELTY or SPECIALTY is ready, send us an Electrotype and descriptive matter, which will appear immediately.

The Hardwaremen everywhere read this department; it is to your interest to make prompt use of it.

The Kleman Nut Lock.

The Kleman Nut Lock, made by the Allison Mfg. Co., Philadelphia, consists of a combination nut having a countersunk cavity on its inner face, Figs. 4 and 5, and an annular tapering divided washer, Figs. 2 and 3, fitted in the counter-





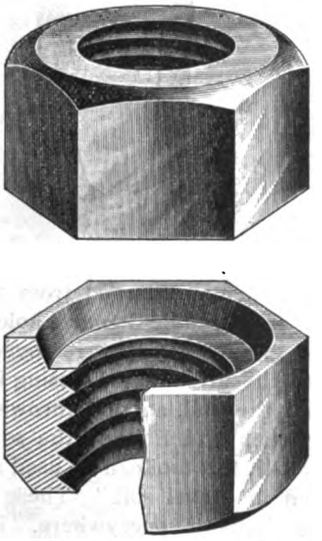


FIG. 1.—NUT IN POSITION.

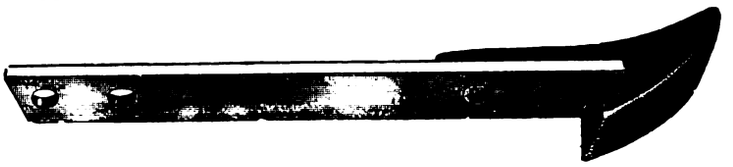
sunk recess, the washer being made of a sufficient depth that when the nut is tightened on the bolt the washer will project from the recess and bear against the plate of bearing. The washer is oil tempered and made of spring steel. In applying the nut lock to use, the washer is put on the bolt against the bearing and then the nut is screwed home upon the plate until the countersunk cavity encircles the washer. Further tightening the nut will compress the washer which is around the bolt and will press against the bearing applied and cause the nut to lock on the washer, as will be understood by reference to the cuts. The nut itself does not bear against the bearings or plate applied, as the outer face of the washer does not extend to the base of the

FIGS. 2 & 3.—WASHER AND FACE-VIEW OF WASHER.

FIGS. 4 & 5.—NUT AND SECTION OF NUT.

cavity. In the nut, space is allowed for expansion and contraction of the bolt. The bearing against the plate is taken entirely by the washer, and as this is divided it will yield so as to fit easily against the plate and afford a perfect bearing, even though the plate be irregular in shape, whereas if the nut should be allowed to bear against the plate such evenness of bearing is not always attainable. The manufacturers state that the excellence of this nut lock has been shown in tests covering long periods of time, on railroad tracks, drop presses, steam hammers and other machinery subject to vibration.

Nevin's Pioneer Paint.

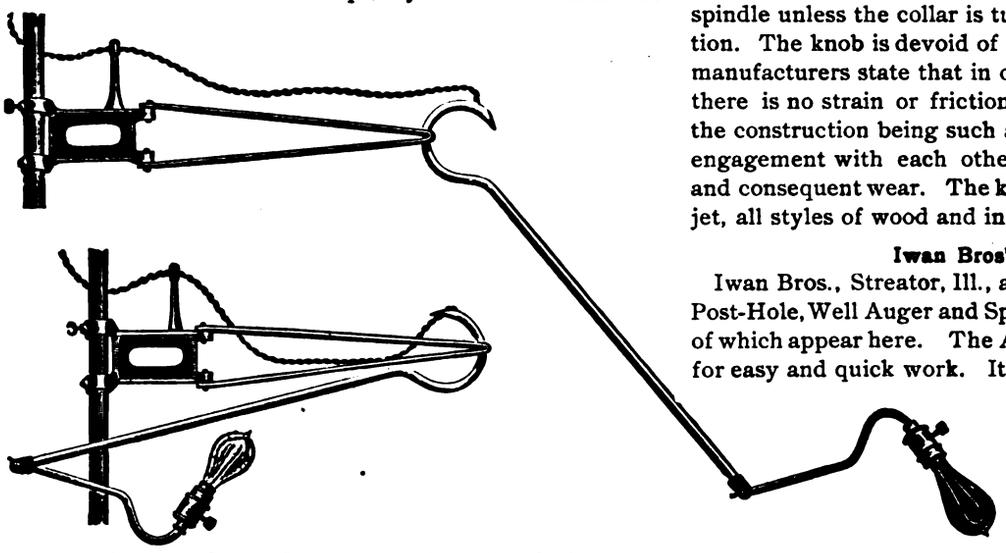


T. H. Nevin Co., Pittsburg, Pa., are putting on the market their Pioneer brand of paints. The manufacturers say: "We have manufactured strictly pure white lead under the old process since 1841. We are outside of all

trusts, and have been manufacturing the celebrated Pioneer prepared paints for over twenty years, and it has what you might say a national reputation. Being corroders of white lead we are able to put into our mixed paints a much larger proportion of carbonite of white lead, and to be able to figure our product for less money than the grinders could possibly do. The grinders have to come to the corroders for their product, and of course under these circumstances are not able to figure as close as a manufacturer could do. Pioneer Paints, as stated above, have been sold for many years, and they are guaranteed to give perfect satisfaction. They run in weight from 14½ to 16 pounds to the gallon. One gallon will cover 250 or 275 square feet of surface, two coats. Quite a variety of tints are manufactured, sample cards of which would be furnished to those interested in same. There are forty-five different shades, all of the latest tints. This paint is perfectly prepared, finely ground, pigments of the best and full measure. We also manufacture a superior article of Pioneer floor paint. This paint is especially made to give a hard durable surface to porch floors. Pioneer prepared paints are manufactured under a formula furnished us by experienced painters in the past. They are manufactured by machinery, consequently are more uniformly mixed than could possibly be done by hand."

Nickerson's Tail-Board Spring.

Dodge, Haley & Co., Boston, Mass., are putting on the market Nickerson's Tail-Board Springs, illustration of which appears here. The crucible steel spring is dovetailed into

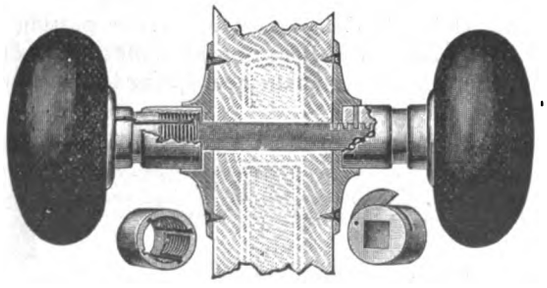


the malleable iron head, to which it is securely fastened by means of rivets. It is remarked that the spring is in the usual form, but the manner of attaching the head, the excellency of material and the economical process of manufacture, give it many advantages over the ordinary hand

Digitized by Google

made article. The company have acquired the exclusive right to manufacture the springs, and state that they are prepared to turn them out in quantities at short notice; also that the springs will not bend or twist, but that they will come back to the proper position every time. The spring is made in seven sizes, from ½ to 1¼ inches.

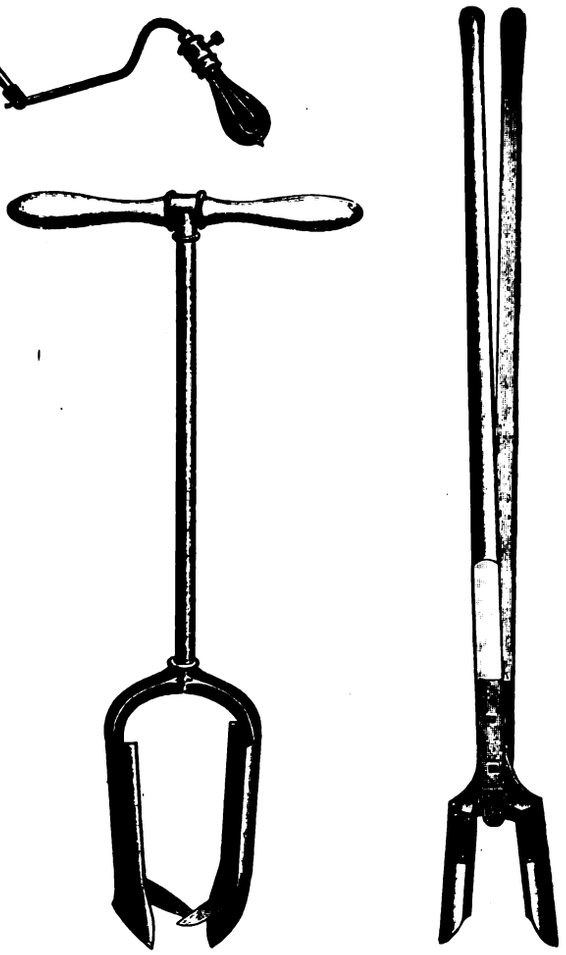
The Faries Universal Lamp Holder.



The Faries Mfg. Co., Decatur, Ill., are producing Holders for incandescent electric lamps, by means of which the

lamp can be moved exactly to any position in which it may be wanted. The illustrations herewith given show the holder provided with eyes to slip over a ¾ inch iron pipe. The combined length of all these sections is five feet, so that the lamp can be placed in any inch of the space in a circle ten feet in diameter horizontally and six feet vertically, besides adjustment up and down the pipe or post to which attached. The pipe may either hang down from the ceiling, extend up from the floor, bench or desk, or better, reach from one to the other, so as to be held at both ends and be stiff as possible. The bracket has an aperture near its outer end and through which the curved end of the arm works loosely, the arm being movable in all directions, up and down and sidewise. Although moving easily by hand it cannot slip or fall, for the instant it is released the weight cramps it.

The Whipple Screwless Door Knob.

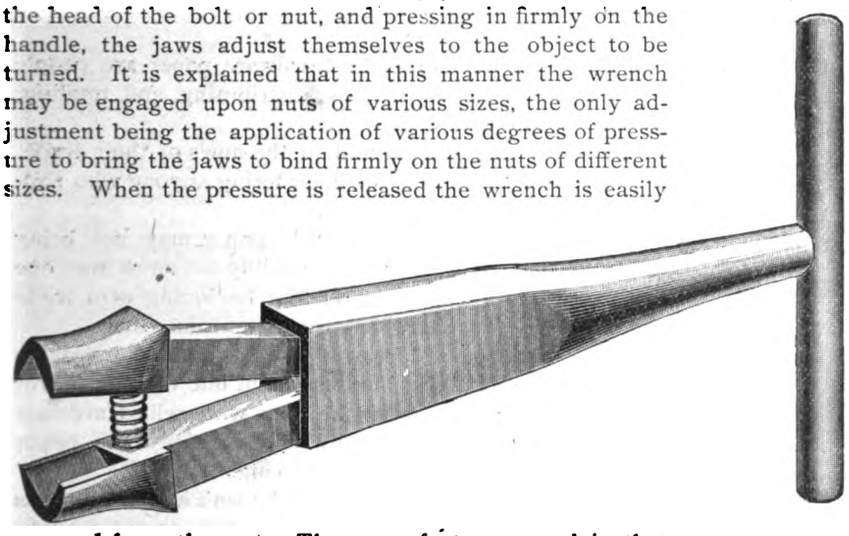


The Whipple Screwless Door Knob Co., Meriden, Conn., are putting on the market an improved form of Screwless Door Knob shown in the illustration. The left hand knob, as shown, is made fast to the spindle and is provided with a self-locking threaded collar, shown immediately below the knob. The knob is provided with a locking spring, which may be depressed by the thumb into a slot in the threaded neck of the knob. The spring when released engages with the grooves in the interior of the collar at every quarter turn of the collar. This arrangement permits of the collar being turned beyond the end of the knob neck for the purpose of adjusting the knob to the thickness of the door. The right hand, or free knob, is held in place on the spindle

by a latch, as shown below the knob in the illustration, which shuts into one of a series of transverse notches in the spindle. In operation the knob spindle having been passed through the door, the right hand knob is pushed on until the latch comes against the flange of the rose, when it is shut down into one of the notches. The spring in the left hand knob is then pressed down and the collar is turned out until it comes to an easy bearing in the rose, when the spring is released and engages with the nearest groove in the collar, thus locking the knob in position. It is explained that in adjusting the knob to the thickness of the door, the catch on the right hand knob is drawn under the flange of the rose, and that it cannot be raised out of the slot in the spindle unless the collar is turned back to its original position. The knob is devoid of washers and side screws. The manufacturers state that in operating the knob on the door there is no strain or friction on any of the working parts, the construction being such as to unite all the parts in solid engagement with each other, so that there can be no play and consequent wear. The knobs are furnished in porcelain, jet, all styles of wood and in bronze metal.

Iwan Bros'. Specialties.

Iwan Bros., Streator, Ill., are offering the trade the patent Post-Hole, Well Auger and Split Handle Digger, illustrations of which appear here. The Auger it is stated "is unexcelled for easy and quick work. It is further stated that no matter



in what condition the soil may be, there is no suction when the auger is removed from the hole. It is said that with the Split Handle digger a hole may be dug in any size and the ground is easily removed: when the digger is forced into the ground and closing in on the jaws the blades will hold the soil, and by throwing the blades in the opposite direction will liberate the soil to drop out. By removing the bolt this tool can be used as separate shovels: it is often used in gravel soil." These goods are handled by leading jobbers everywhere, including Horton, Gilmore, McWilliams & Co., John Alling & Co., Wells & Nellegar Co., and Illinois Roofing & Supply Co. of Chicago; John Pritzlaff Hardware Co., of Milwaukee, A. F. Shapleigh Hardware Co. and Simmons Hardware Co., of St. Louis, Mo.

Brassell Adjustable Socket Wrench.

The Brassell Wrench Co., Boston, Mass., are offering to

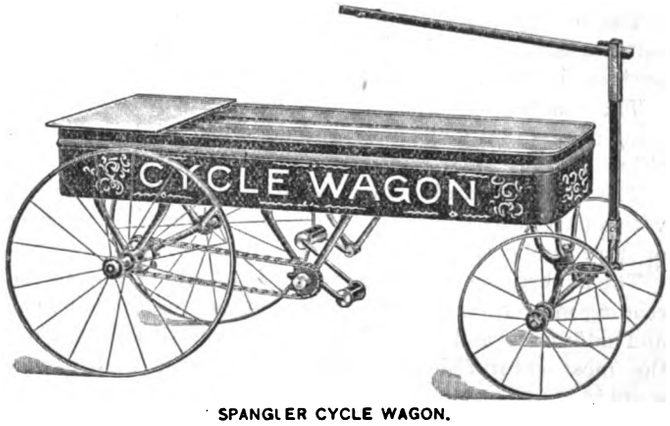
Digitized by Google

the trade the Adjustable Socket Wrench herewith illustrated. In adjusting the wrench for use it is given a quick jerk from the person using it, the force throwing out the jaws, as in the above illustration. By pressing the jaws on the head of the bolt or nut, and pressing in firmly on the handle, the jaws adjust themselves to the object to be turned. It is explained that in this manner the wrench may be engaged upon nuts of various sizes, the only adjustment being the application of various degrees of pressure to bring the jaws to bind firmly on the nuts of different sizes. When the pressure is released the wrench is easily

removed from the nut. The manufacturers explain that the wrench will fit the various sizes of nuts and bolts in use, that it takes the place of a number of wrenches of ordinary form, and that it can be used on nuts and bolts in position where an ordinary wrench would be of little use.

Some Holiday Novelties.

As the holiday season advances, dealers cast their eyes around for attractive novelties. The Quadruped Novelty Co., Canton, Ohio, are early in the market with a line that always proves a source of pleasure and satisfaction, and at the same time provides the juvenile members of a community with a healthful form of exercise. We illustrate here the Riding Horse Tricycle, the Toy Trotting Horse, and the Spangler Cycle Wagon, all manufactured by the



THE RIDING HORSE TRICYCLE.

above named company. The Riding Horse Tricycle is designed for children of both sexes, from three to twelve years of age, and strongly suggests that summit of juvenile desire, "a real live pony." The height of horse from head is 36 inches; the body being stamped from sheet metal, is at once exceedingly light and strong, and the mechanism for operating it, simple and durable and not liable to derangement. The wheels are rubber-tired, securing its noiseless running; and the neck being pivoted to the body, the rider guides his steed by drawing on the

TOY TROTTING HORSE.

bridle reins precisely as in the case of a real animal. The horse is propelled by the feet like the ordinary tricycle, and the legs responding to each revolution of the pedals reproduce the action of a horse in trotting. The horse is handsomely painted in the various colors found in nature; has suitable mane and tail, and is furnished with a neat saddle, bridle and neck collar. The Toy Trotting Horse is described as one of the most beautiful, attractive and durable toys for children ever introduced. It is made from the best light grey iron, stands nine inches in height, and is painted in all colors of the horse. The body is mounted on a four-wheeled platform, which, when pulled along by the child, moves the legs of the horse as in trotting. The Spangler Cycle Wagon, the manufacturers say, "is made of the best material and constructed mechanically after the most approved methods. The axles are of the best steel, with spindles milled and fitted by special machinery. The wheels are steel, reamed for neat fitting and easy bearing, and will carry with safety 300 pounds. The brackets and supports are all of the best malleable iron, carefully fitted, and the pedal cranks are of Bessemer steel, formed with dies made for the purpose. The wagon is propelled by pedals connected with the rear axle by sprockets and chain, thus providing a movement that is easy and powerful to

SPANGLER CYCLE WAGON.

propel on ordinary roads. The guiding device is simple, being a joint or hinge in the middle of the tongue, allowing it to turn back over the body, within reach, so that the rider can guide with ease and safety. The size of the body is 15x36 inches, firmly and neatly made, and painted in various colors. There is a trap lid in the bottom, which, being lifted, provides a seat for the rider, leaving an opening in the bottom for propelling. The front wheels are of a height to pass under the body for short turning."

James B. Tetley recently opened a new Hardware store at No. 4727 Liberty Avenue, Pittsburg. A full line of Hardware, tools, cutlery, etc., will be carried.

THE BUSINESS PAPER.

BY NATH'L C. FOWLER, DOCTOR OF PUBLICITY.

The trade paper is a trade necessity.

Business may be run without it.

Business never has been run without it.

The merchant can write his letters on a barrel-head—but he doesn't.

Merchandise can be sent across the continent by mule-power, but nobody uses that motor.

I don't own a trade paper.

I never did own a trade paper.

I never expect to own a trade paper.

I have no trade paper interest.

I simply know trade papers.

I am writing what I know.

A bank president in Boston can't write more than his name, but his ignorance didn't make him a bank president.

There are men who don't read the trade papers and succeed, but so long as the ninety-and-nine read trade papers, and are successful, there is no need of discussing the peculiar composition of the one man who makes money, and reads nothing.

The trade paper is a commercial clearing house, with members entirely confined to its particular trade.

It is more than a clearing house, it is a typographical business club, and into its arena is thrown the thought of trade.

It is a printed show-room, where everything new, and everything interesting, are placed before the reader, for the reader's benefit.

The good trade paper civilizes trade—spreads trade—increases trade—makes trade honest—disarms unnatural competition, tends to raise cold-blooded business up to the fraternity of social decency.

The man who reads a trade paper may not be wise, but I never knew a fool to read a trade paper.

The trade paper reaches into general trade, and absorbs that line of business which is pertinent to the class it illustrates.

The trade paper gives to the reader that which he wants—it is a sort of sieve through which only can pass words of business interest.

The reason that trade papers carry advertising is the same reason that magazines and daily papers carry advertising.

The first-class trade paper has just as much right to devote a part of its pages to advertising as has the magazine or story publication.

The advertising in a trade paper is as interesting as the reading matter, for the advertising pages present the names and addresses and other business information concerning the most enterprising business men in the trade represented.

A man can do business without advertising in the trade paper, but the fact that comparatively few men of enterprise do not advertise, indicates that the advertisement in the trade paper has money-bringing and trade-increasing value.

The progressive manufacturer or wholesaler realizes that while the circulation of the trade paper may be small, every copy goes into the hands of a probable customer.

A paper with a circulation among one thousand probable customers is worth more than the circulation of a paper with one hundred thousand among possible customers unless the one thousand probable customers are included in the one hundred thousand possible customers.

Copyright, 1895, by Nath'l C. Fowler, Jr.

The only people who read a Hardware paper are people who earn their living, making, distributing, and retailing one particular line of goods.

They are not only interested in the news of their trade, but they are ever anxious of considering anyone who supplies the goods they sell.

The advertisement in the trade paper may not bring more than one answer a month, possibly not more than one a year, but one answer may be the beginning of a trade which will pay for the advertisement ten times over.

There are a thousand reasons why a general magazine should not be read by business men, but the sun never shone upon a reason why the man who sells Hardware should not read systematically and carefully the paper which represents the trade of his living.

He reads the trade paper, and as he isn't a fool, he reads the advertising pages as carefully as he reads the reading matter, for the business man knows that the advertising pages will present to him ways and means of increasing his business, and of making more money.

The man who does not believe that people read trade paper advertisements is advised to print at the bottom of his advertisement, in the smallest possible type, the statement that he will present a yellow dog, or a rosewood piano, to any reader of the paper who sends for it.

The best advertising in the world is the advertising that strikes men squarely between the business eyes.

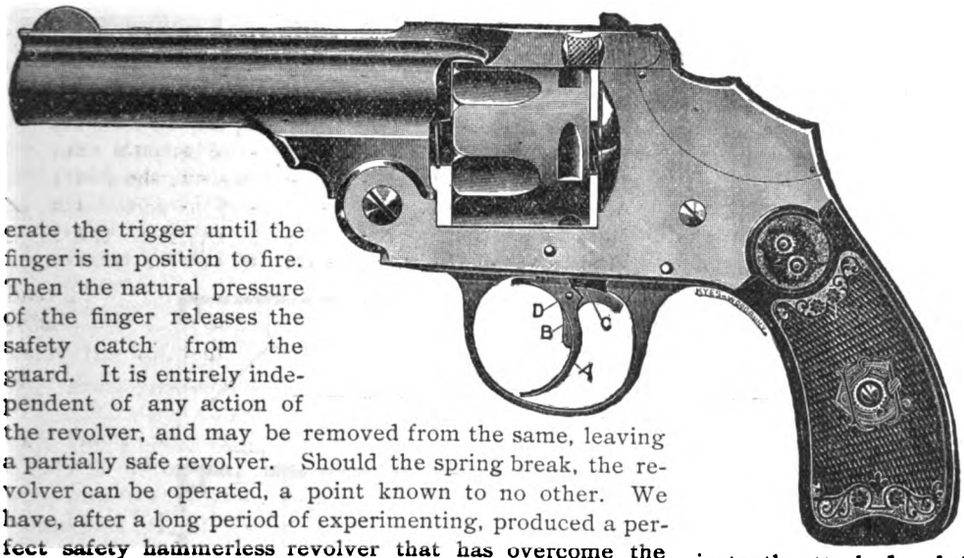
The trade paper contains nothing but business—it is the one great business-bringer of wholesale publicity.

There is something the matter with the business man who can't build business better with the business assistance of business papers.

After lying forgotten in a garret for over thirty-one years, the old iron handcuffs which were worn by John Brown during his confinement in the armory at Harper's Ferry, were recently brought to light in Benton Harbor, Mich., by Daniel Litzer, a former resident of Harper's Ferry. They came into Mr. Litzer's possession through his half-brother, Asa Maysteller, who had charge of the armory while John Brown was held to await the arrival of the sheriff.

Electricity is now used to detect paste diamonds from the genuine. A small disk of aluminum is attached to the spindle of a small motor. A clamp with a small flat spring, provided with an adjustable screw, holds the article to be tested. It is then moistened and placed in contact with the rapidly revolving aluminum disk. If the stone is a genuine one, it will be left intact; if it is bogus, it will show brilliant metallic marks.

The Diamond Machine Co., Providence, R. I., are to make an exhibit of their Ball Bearing Grinder and other machinery for the use of bicycle manufacturers at the Stanley Cycle show, to be held in London, England, in November.

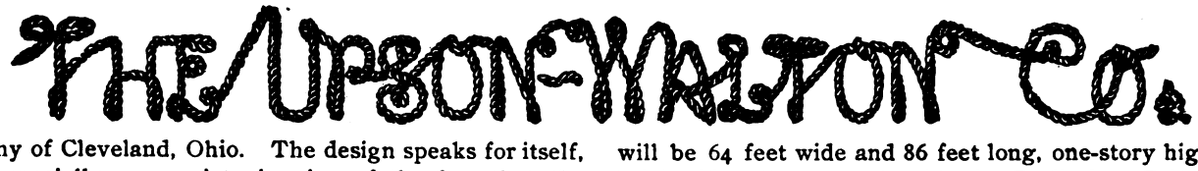


Covert's Saddlery Works, Farmer, New York, have opened a warehouse in Philadelphia, at No. 140 North Third Street, for the sale of their various goods. Allen & Miller are their agents.

The Calumet Furnace Co. are expected to stock up the nail mills of the Calumet Iron and Steel Co., Chicago, which they have leased. The works will give employment to about 800 hands.

Digitized by Google

Iver Johnson's Safety Hammerless Revolver.

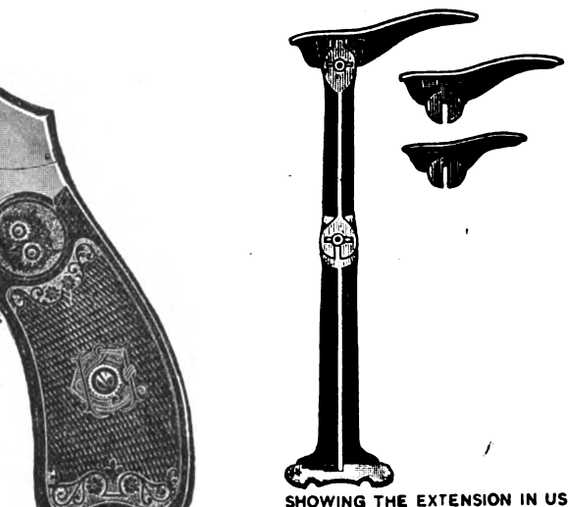


The Iver Johnson's Arms & Cycle Works, Fitchburg, Mass., are offering to the trade a new Safety Hammerless Revolver, illustration of which is shown herewith. The company, in describing the new arm, say: "Our safety catch on the trigger is best shown by referring to the cut. A, the trigger; B, the safety catch; C, the safety catch spring; D, the pin holding the safety catch and spring in its position with the trigger. Its simplicity is readily seen—the catch lying against the guard, it is impossible to operate the trigger until the finger is in position to fire. Then the natural pressure of the finger releases the safety catch from the guard. It is entirely independent of any action of the revolver, and may be removed from the same, leaving a partially safe revolver. Should the spring break, the revolver can be operated, a point known to no other. We have, after a long period of experimenting, produced a perfect safety hammerless revolver that has overcome the many disadvantages of hammerless makes. Our Iver Johnson Safety Hammerless Revolver embodies all the principal features of our safety hammerless revolver, viz.: the action, barrel catch, and rebounding lock, together with our new device for the cylinder and safety catch. This revolver steps to the front with the following advantages: fewer parts than any of its kind, an easy and accessible way to the action by a top-plate, quick and effective cylinder catch, and our new safety catch on the trigger, new in itself and the only catch that will lock the revolver safely. All the so-called safety hammerless makes lock the hammer by complicated devices arranged in such a way that, by a slight accident, the safety becomes disarranged and it is impossible to operate the revolver.

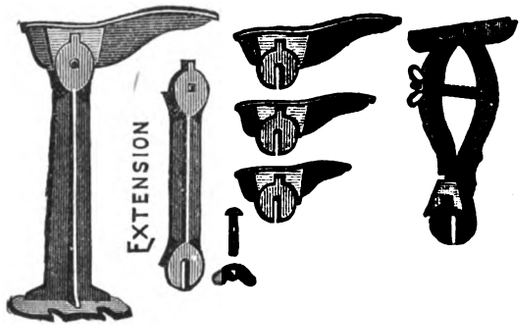
"Why should the hammer be locked and the action interfered with, when the very name—safety hammerless—designates that there is no hammer in sight, and that the hammer lies entirely concealed within the frame? Others will see this, and so did we—that the only source of danger to a hammerless revolver is the trigger—and, to overcome this, we have constructed the Iver Johnson Safety Hammerless Revolver, with our safety hammer of similar pattern to the hammer used in the Iver Johnson Safety Hammer Revolver, and placed our safety catch in the trigger, independent of any action of the revolver, operating against the guard."

An Artistic Letter Heading.

As an illustration of what may be done in the way of an artistic heading for stationery or business cards, we show that adopted by the Upson-Walton Co., a well-known



company of Cleveland, Ohio. The design speaks for itself, and is specially appropriate in view of the fact that the company are among the largest dealers in rope and other ship supplies upon the Great Lakes.



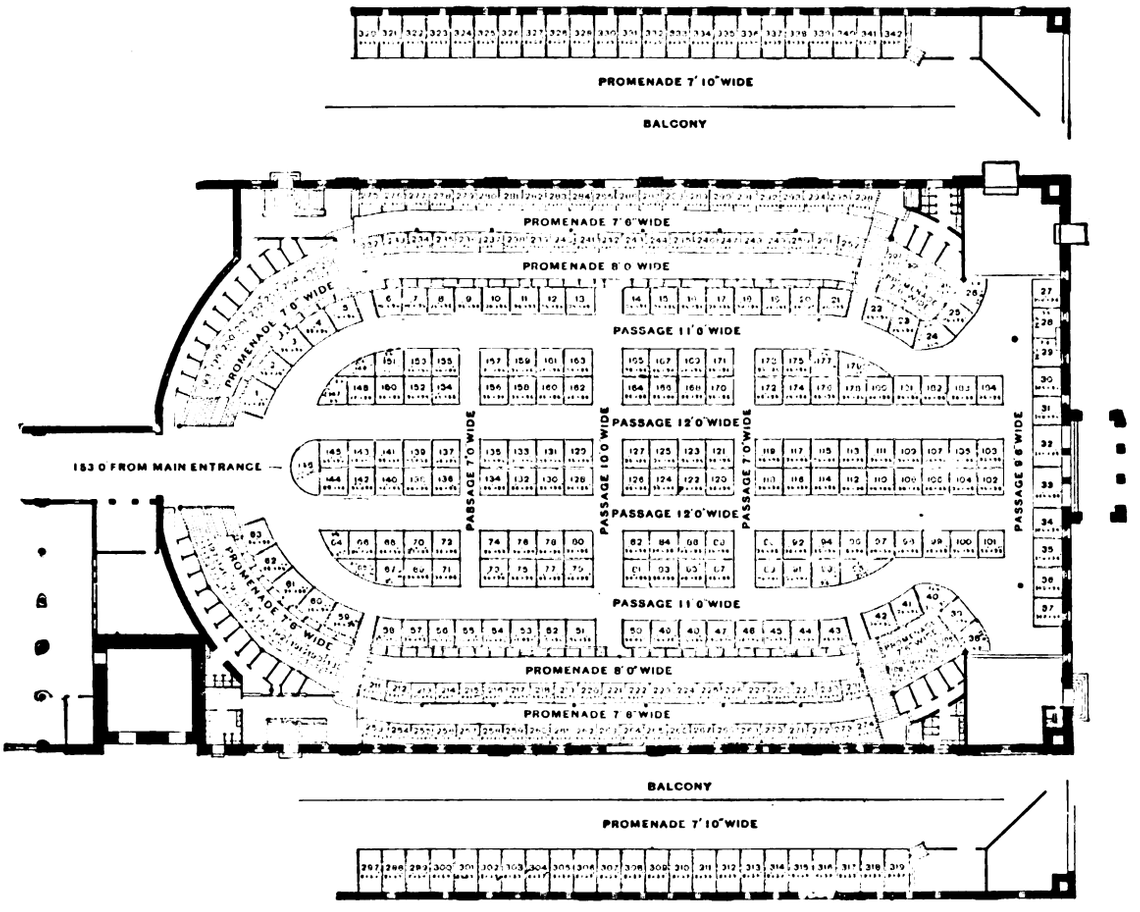
HARDWARE costs only One Dollar a year.

Root's Last and Stand.

The Root Bros. Co., Plymouth, Ohio, manufacturers of Iron Lasts and Outfits for home repairing, have just brought out a new style of last and stand which they consider decided improvements over the old style. As will be noted in the accompanying illustration, the standard is made on the extension principle, so that the lasts can be used by the operator standing at a bench, or while sitting. For use on a bench, the extension is omitted, making the height about thirteen inches; while for floor use it can be instantly attached and the height adjusted to about twenty inches, making it just right for the last to be held over the knees, the base of the standard resting on the floor. Another decided improvement in the lasts is in the manner of attachment. Heretofore the trouble has been in getting the lasts to fit securely on the standard, common lasts being made with a socket into which the standard is inserted so that the lasts are apt to shuck around, or bound off, while in use. This difficulty has been entirely overcome in Root's style of lasts; the last, as well as the sewing clamp,

SHOWING THE EXTENSION IN US

being attached to the standard by the means of a thumbscrew, which holds them in a perfectly rigid manner. The Root Bros. Co. are the sole manufacturers, having secured a patent October 8, 1895, and full information and prices are given in their neat little circular, entitled "Have You Seen Root's Latest?" which may be had for the asking.



The Wilbraham-Baker Blower Co., Philadelphia, have placed the order for their new pattern storehouse with the Berlin Iron Bridge Co., East Berlin, Conn. The building will be 64 feet wide and 86 feet long, one-story high, with brick sidewalls, covered with the Berlin Iron Bridge Co.'s patent anti-condensation corrugated iron roof covering, and will be absolutely fireproof. The Wilbraham-Baker Blower Co. report trade as very brisk and are full of business in all departments.

The New York Cycle Show.

An examination of the accompanying diagram and list will show how the exhibition spaces have been arranged and to whom they have been assigned:

Yost Mfg. Co., - - - - - - 1, 2
Davis Sewing Machine Co., - - - 3, 4, 5
Eclipse Bicycle Co., - - - - - 6, 7
Barnes Cycle Co., - - - - - 8 9, 10
Light Cycle Co., - - - - - - 11
St. Louis Refrigerator & Wooden Gutter Co., 12, 13
Fowler Cycle Mfg. Co., - - 14, 15, 16, 17
Hay-Willits Mfg. Co., - - - - 18, 19
Gendron Iron Wheel Co., - - - 20, 21
McKee & Harrington, - - - - 22, 23
Kenwood Bicycle Mfg. Co., - - - 24
Columbus Bicycle Co., - - - - 25, 26
National Cycle Mfg. Co., - - - 27, 28
G. M. Shirk Mfg. Co., - - - - 29
Zenith Cycle Co., - - - - 30
W. W. Whitten Cycle Mfg. Co., - - 31
Acme Mfg. Co., - - - - 32

Porter & Gilmour, - - - 33, 34, 35
Capital Mfg. Co., - - - - 36
Buffalo Wheel Co., - - - - 37
Winton Bicycle Co. - - - 38
George M. Hendee, - - - - 39
Henley Bicycle Works, - - - 40
Fenton Metallic Mfg. Co., - - - 41, 42
International Mfg. Co., - - - 43
Crawford Mfg. Co., - - - 44, 45, 46
Syracuse Cycle Co., - - - 47, 48, 49, 50
Indiana Bicycle Co., - - 51, 52, 53, 54, 55
Relay Mfg. Co., - - - - 56, 57
Premier Cycle Mfg. Co., - - - - 58
Rouse, Hazard & Co., - - - 59
George N. Pierce & Co., - - - 60, 61, 62, 63
Humber Co., American, L't'd, - 64, 65, 66, 67, 68
Plymouth Cycle Mfg. Co., - - - 69
H. A. Lozier & Co., - - - 70
Plymouth Cycle Mfg. Co., - - - 71
H. A. Lozier & Co., - - - 72
Peerless Mfg. Co., - - - 73, 74, 75, 76
Eagle Bicycle Mfg. Co., - - 77, 78, 79, 80

Gormully & Jeffrey Mfg. Co., 81, 82, 83, 84, 85, 86, 87, 88
Monarch Cycle Mfg. Co., - - - 89
Hulbert Bros. & Co., - - - - 90
Monarch Cycle Mfg. Co., - - - 91
Hulbert Bros. & Co., - - - - 92
Monarch Cycle Mfg. Co., - - - 93
Hulbert Bros. & Co., - - - - 94
Sieg & Walpole Mfg. Co., - - - 95
Hulbert Bros. & Co., - - - - 96
Royal Cycle Works, - - - - 97, 98
O. J. Faxon & Co., - - - - 99
Bridgeport Gun Implement Co., - - 100, 101
Ames & Frost Co., - - 102, 103, 104, 105
Grand Rapids Cycle Co., - - - 106
Adams & Westlake Co., - - - - 107
Waltham Mfg. Co., - - - - 108
Warwick Cycle Mfg. Co., - - - 109
Waltham Mfg. Co., - - - - 110
Warwick Cycle Mfg. Co., - - - - 111
A. M. Scheffey & Co., - - - 112
Marion Cycle Co., - - - - 113
Western Wheel Works, - 114, 115, 116, 117, 118, 119

A. G. Spalding & Bros., 120, 121, 122, 123, 124, 125, 126, 127
Pope Mfg. Co., - 128, 129, 130, 131, 132, 133, 134, 135
Sterling Cycle Works, - - 136, 137, 138, 139
Remington Arms Co., - - - 140
Union Cycle Mfg. Co., - - - - 141
Remington Arms Co., - - - 142
Union Cycle Mfg. Co., - - - - 143
Remington Arms Co., - - - 144
Union Cycle Mfg. Co., - - - - 145
A. G. Spalding & Bros., - - - 146
Central Cycle Mfg. Co., - - - 147, 148
White Sewing Machine Co., - - - 149
Central Cycle Mfg. Co., - - - - 150
Edwin Oliver & Co., - - - - 151
Tinkham Cycle Co., - - 152, 153, 154, 155
Liberty Cycle Co., - - - - 156
John P. Lovell Arms Co., - - - 157
Liberty Cycle Co., - - - - 158

Standard Cycle Works, - - - - 296
Worcester Cycle Mfg. Co., - - 297, 298, 299
Betts' Patent Headlight Co., - - - 300

Applications have also been received from the following firms: Century Cycle Mfg. Co.; Everett Cycle Co.; Combination Roll & Rubber Co.; Snell Cycle Fittings Co.; Eugene Arnstein; Thomas H. Stewart; the Beuscher Mfg. Co.; Spaulding & Pepper Co.; Charles J. Godfrey; Elizabeth Cycle Mfg. Co.; the Fanning Ball Bearing Chain Co., the E. Alsdorf Co.; the E. Webster Mfg. Co.

A Hint for Christmas.

The unique and artistic illustration accompanying this, conveys the suggestion that Bissell Carpet Sweepers are appropriate for Christmas gifts—a fact that, as the declaration says, "is self-evident." In this connection it may be noted that the factories of the Bissell Carpet Sweeper Co. are running nights, and it will be to the advantage of dealers to place their orders for the holiday trade as early as possible, to insure prompt delivery. The illustration shown is a fac-simile of a very handsome hanger in colors, which the company are now preparing for distribution among customers at an early date.

Cordley & Hayes' Catalogue.

Cordley & Hayes, No. 172 Duane Street, New York, under date of November 1st, issue a catalogue on indurated fibre ware which replaces all previous lists. The company say: "In presenting this edition of our catalogue we annul all previous lists heretofore issued by us. Some new lines are added in this list to the already large assortment of indurated fibre ware produced, and we shall, as further new lines are taken up, issue illustrations and descriptions. Indurated fibre ware is said to be superior to wood, paper, tin and iron ware, in these particulars: Will not shrink or swell; will not taint water, milk or other liquids; cannot leak, water-soak or rust; has no hoops to drop or rust off. Being seamless, bottom cannot drop out; has no paint or varnish to wear off; does not require paint or varnish to preserve it; is proof against hot and cold water, kerosene, benzine, and ordinary acids; and is lighter than a wooden pail, and will not soak, thus becoming heavier. With the catalogue are a set of blotters which not only illustrate and describe some of the goods, but are of a handy size for office use."

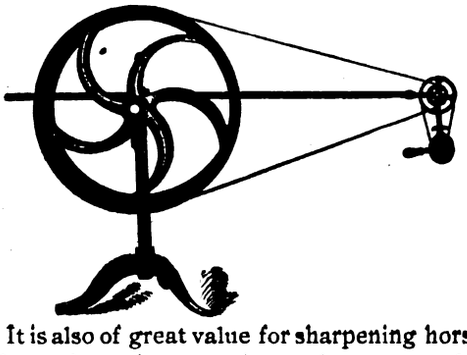
Mr. Advertiser, Now's Your Chance.

A cash prize of $100 for the best advertisement of "Bissell" carpet sweepers as Christmas gifts is announced by the Bissell Carpet Sweeper Co., Grand Rapids, Mich. They also state that their Christmes offer of carpet sweepers this year has never before been equaled by any manufacturer—at any time—for any purpose in the history of the carpet sweeper business.



In explanation of their offer, they further say: "This Christmas our assortment of special electrotypes for newspaper advertising is both larger and better than ever before, and to those who desire to use them we will be pleased to supply one or more entirely free of cost and send them charges prepaid to any address. We have also decided to pay $100 in cash for the three best 'ads.' of Bissell sweepers as Christmas gifts. First prize, $50; second prize, $30; third prize, $20. Most of our dealers have regular space in their local papers. They must advertise something, why not Bissell Sweepers? They are very popular Christmas gifts and are just as profitable as they are popular. Our electrotypes are attractive—they will help brighten your 'ad.'—they cost nothing—you have the space—it costs nothing to try. You are certain of a good profit on every sweeper you sell, and if your 'ad.' wins, it is a neat sum very easily earned. This offer is confined entirely to our customers and their employes, to whom we will be pleased to send, on request, a special sheet, illustrating our assortment of electrotypes and other special Christmas advertising features."

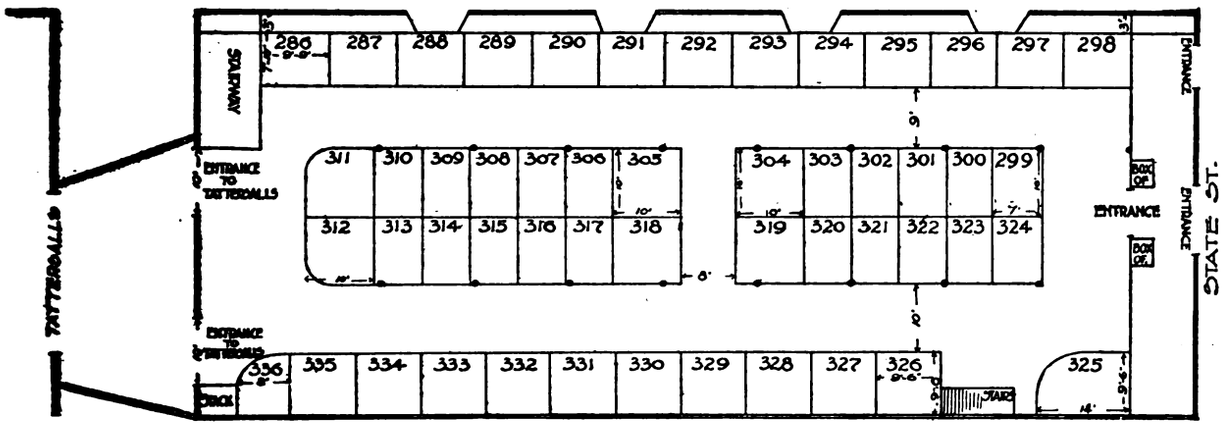
W. W. Pryor Hardware M'f'g Co.

The business of the Essex Tool Co., of Newark, N. J., manufacturers of spring and revolving punchers, door sorings and specialties has been purchased by W. W. Pryor & Co., of New York City, and will be organized as the W. W. Pryor Hardware M'f'g Co. The new company intend to increase the facilities for manufacturing and will produce many new articles, in addition to the old established line, which is so well known to the Hardware trade throughout the country. They expect to produce the best goods possible for the least money, and aim to give their patron tools that will give satisfaction both in finish and durability. A full line of goods will be carried at their New York office No. 81 Chambers Street.

The Gokey Grinding Machine.

The Walker Mfg. Co., No. 164 Bank Street, Burlington, Vt., are offering to the trade the Gokey Grinding Machine herewith illustrated. The machine is designed for use on the farm, taking the place of the grindstone, for sharpening knives, axes, corn-cutters, hoes, scythes and mowing machine knives, as it does the work so much easier and

quicker. It is also of great value for sharpening horses' shoe calks, a few minutes' use saving a journey to the blacksmith's, and often much loss of time waiting your turn. It is recommended to the use of livery stable keepers as their horses could always be sharp shod for instant service. A special offer of interest concerning this machine will be found on page 65 of this issue.



Chicago Cycle Show.

The prospects for the success of the Cycle Show at Chicago, January 4th to 11th, are very bright. All the spaces at Tattersall's have been assigned, and so many additional applications for space were received that it was found necessary to secure the Jonathan Clark Building directly adjoining Tattersall's to provide for the extra applicants. We print herewith the diagrams of Tattersall's and the Jonathan Clark Building and give the names of the exhibitors and the numbers of their spaces:

Columbia Bicycle Co.,	1
Kingman & Co.,	2
Prentiss Tool Supply Co.,	3, 4, 5
U. S. Heat & Light Co.,	6, 7
W. E. Frazier & Co.,	8, 9
Owen Mfg. Co.,	10

Gallium a peculiar metal found in zinc ores is put down as the most valuable metal, costing $3000 an ounce.

Improved Brooklyn Bicycle Stands.

We herewith give illustration and description of a Bicycle Stand very much in demand during the season of 1895. The improvements made on the Brooklyn Stands by the Bridgeport Gun Implement Co. will allow the same to be used for women's as well as men's wheels. The clamp on head (see illustration) can be adjusted to fit any size tubing, having threaded screws on both sizes of clamp which will allow the user to get the proper adjustment. The improvement made on the head of this stand will be greatly appreciated by users, as it can be adjusted to fit any size crank hanger used on wheels of the present day.

Dealers who desire to show the easy running qualities and the working of the chain on a bicycle, will find this stand a great advantage in this respect, as the upright can be raised and lowered in the tripod, thus lifting the machine clear from the floor. The advantage for cleaning a bicycle after a rough ride should not be overlooked by bicycle riders, as this stand is fitted with castors, which allow the owner to sit on a chair and clean the entire machine without shifting his position. Special wire spring attachment to hold front wheel in position can be had if so ordered.

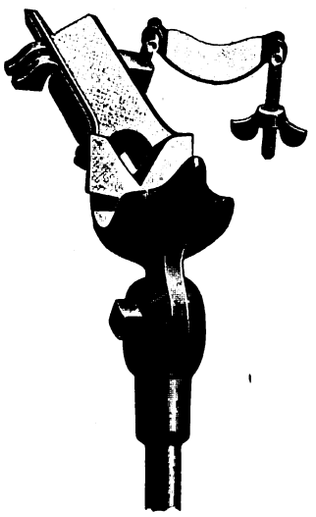

FIG. 1. ADJU TABLE HEAD CLAMP.

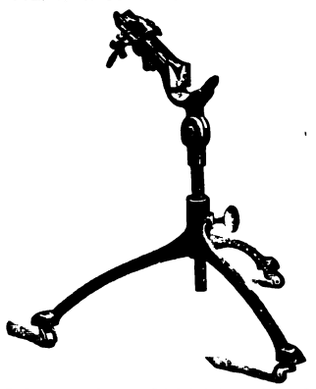

FIG. 2.—NO. 1, BROOKLYN STAND, BLACK AND WHITE ENAMEL.

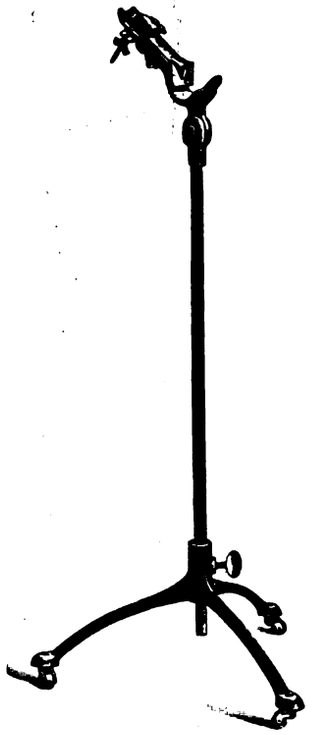

FIG. 3.—NO. 2, BROOKLYN STAND, BLACK AND WHITE ENAMEL.

The manufacturers announce that they will supply exhibitors of the New York and Chicago shows with Brooklyn Stands in a special white enamel finish, which will add attractiveness to an exhibit. Their No. 2 stand, which is especially adapted for exhibition purposes, is furnished with a 26-inch rod, which will be about the proper height allowed at the shows, but a longer rod can be supplied, if required. These stands can be had with castors or screw holes, and if a longer rod than 26 inches is used, the company recommend a stand with screw holes. We print below a list of various styles. For prices and discounts refer to the Bridgeport Gun Implement Co., Nos. 313 and 315 Broadway, New York.

No. 1 Improved, Black Enamel Finish (small rod) . . . . . $2.00 each
No. 2 " " " " 26-inch rod for exhibition purposes . . . . . 2.25 "
No. 3 Improved. Nickel-Plated (otherwise same as No. 1) . . . . . 3.50 "
No. 4 " " " " " No. 2) . . . . . 4.00 "

Special for the New York and Chicago Shows—Brooklyn Stands Finished in White Enamel.

No. 1 Improved White Enamel Finish. . . . . $3.25 each
No. 2 " " " " . . . . . 3.75 "

A list of other stands made by this company will be sent to any address upon receipt of application.

Review of the Markets.

Hardware: Trade has slackened somewhat, but may be likened to a machine that is stopped to be oiled. During the lull the manufacturers and jobbers are preparing for the holiday trade, which is expected to be a good one. The fall business in many respects has proved a disappointment. Orders are not of a speculative character, jobbers being in most cases pretty well loaded. Collections have improved, but are still a source of complaint. The tendency to shade prices has lessened considerably, and manufacturers think that prices will now be fairly well maintained. Fire arms and sporting goods are in demand, owing to the continuance of the mild and Indian summer-like weather.

Wire Nails: There was no change made in the base price of Wire Nails at the meeting of the manufacturers held quite recently in New York, but the output of the mills for November has been curtailed to a considerable extent to allow the demand to catch up with the supply. The belief is expressed by those in a position to talk with authority that prices will remain unchanged for the balance of the year, though a further advance in January or February is not improbable. Information on this subject is however largely guess work. To the delivery price of carload lots the following advances have been made: 3c to New York, Philadelphia, Baltimore, and the Southwest; 2½c to Chicago; 3½c to St. Louis, New Orleans, Mississippi River points and New England. This change has been made necessary by the winter freight rates being in force. Wire Nails in carload lots on dock in New York are quoted at $2.43, and small lots from store are held at $2.53. Pittsburg prices are as follows: carload lots or mixed cars, $2.25 per keg, base, f.o.b., Pittsburg; less than carload lots, $2.35 per keg, base, f.o.b., Pittsburg. The manufacturers have, however, decided without reference to the less than carload freight rates to increase the minimum market base selling prices of less than carload lots from all shipping points 10 cents over the carload prices. On contracts of 1000 kegs to be taken in one calendar month from one mill for direct shipment in less than carload lots, 5 cents only is to be added to the carload price.

Cut Nails: As in the case of Wire Nails the prices of Cut Nails were not changed by the manufacturers last week. Prices quoted are as follows: Carload lots or over, $2, base, Pittsburg delivery; less than carload lots, $2.05, base, Pittsburg delivery. To jobbers taking from one mill within one calendar month 500 kegs or over, 5 cents rebate per keg is allowed. The delivery prices are subject to the following increases as in the case of Wire Nails: 2½c to Chicago; 3c to New York, Philadelphia, Baltimore and the Southwest; 3½c to St. Louis, New Orleans, Mississippi River points and New England. The same increase of 10 cents over carload lots from any point is also applied to less than carload lots of Cut Nails. New York quotations are as follows: Carload lots on dock, $2.18; small lots on dock, $2.28, and small lots out of store $2.30. The prices are computed in this manner: take the Pittsburg base prices of carloads $2 and add the extra 10 cents charged for less than carloads, and the freightage of 18 cents the rate to New York, and the result will be the price of less than carload lots on dock New York, $2.28.

Tacks: The Tack market is in a somewhat unsettled condition. New discount sheets which will tend to lower prices are looked for, but when they will appear cannot be predicted with certainty.

Glass: Window Glass manufacturers met in Chicago on October 26, and decided to advance prices 2½ per cent. on carloads and stop the custom of allowing freightage. The domestic product is now quoted at 75 per cent. off on carlots and 70 and 10 per cent. on ordinary quantities.

At a meeting recently held in Pittsburgh the prices of all sizes of Plate Glass were advanced about 5 per cent.

Linseed Oil: New York prices are given as follows: Raw 44c per gallon, boiled 47c per gallon, Calcutta raw 48c per gallon.

The following quotations are made by the National Lead Co.: White Lead, dry or in oil, and Red Lead and Litharge in kegs. In lots less than 500 pounds, 6 cents net; in lots of 500 pounds and over, 5½ cents; Red Lead and Litharge in barrels and half barrels, ¼ cent per pound less than price in kegs.

Putty: Prices remain at $1.40@$2.25 as to quantity and quality.

The prices quoted below are for small lots. Round lots, except Tobin Bronze, can be purchased at lower prices:

Strawberry Forks	70%
Coffee Mills, No. 3102	70%

Clapp & Co., bankers and brokers, New York, in their weekly letter say: "Victory and defeat are sometimes hard to distinguish. Between the State elections and the Republican Congress is only a step. A victory that would promise further emphasis to the period of revenue deficit, bond debt and business demoralization is on one hand; a defeat that would give Congress the aggressiveness of an avenging goddess is on the other. Treasury official utterances offer as little relief as do the tariff principles to which the national executive stands consecrated. Between gold talk and silver payment is a gulf that in an off year might prove unfortunate. Another emergency, another rescue and another business boom is possible."

THE DETROIT TRADE.

The volume of business for October did not come up to expectations, presumably on account of decline in price in Bessemer Pig Iron, which no doubt checked all the speculative tendency there was in the market, not only with jobbers, but with retailers as well; still we find seasonable goods are moving in improved quantities, indicating that the stocks of the retailers are not large, and must be sorted up just as fast as their trade warrants it. We also find that prices are very well maintained, except in a few instances notably, Window Screen Cloth, so that on the whole, we cannot find very much to complain of. Had it not been for the excessive drouth in this section during the entire year, we have no doubt but that we would have had a very much better trade this fall. BUHL SONS & Co.

THE DAVENPORT TRADE.

Hardware: Wire nails have again advanced, and no reason given other than it is the arbitrary wish of the Wire Nail Association. An open market on tacks is expected on the 15th of November. Trade in general Hardware is only fair, with collections light.

Iron: Prices well maintained at the recent large ad-

Digitized by Google

vances; October trade is greater than last year; collections good; an advance is expected in wooden wagon material.

Malleable Iron: Factories running full time; orders enough in hand to keep them busy for three months; prices no higher than last year; collections good.

Wagons: More wagons made and sold up to the present time, than the entire year of 1894, with prices about the same, running full time; future prospects bright; collections fair.

Buggies and Carriages: Larger trade than last year; prices for 1896 will be higher; collections poor.

Stoves: Trade is somewhat better than in 1894, running full time, but just now are accumulating stocks on account of mild weather, but expect to reduce the surplus as soon as the weather becomes colder and more seasonable. Prices are a trifle lower than last year; dealers are not discounting their bills as freely as usual.

Bettendorf Metal Wheel Co. report orders larger than for three previous years; have more orders in hand now than they can fill; running night and day for six months. Prices higher than last year and nothing to complain of in the way of collections.

Steel: Sylvan Steel Co. report running double turn; more orders in hand than they can turn out in three months, with prices 40 per cent. above those of last year; collections good.

Plows: Manufacturers report better trade than for several years, with prices about the same as last year; running full time; outlook promising, although trade for spring has hardly developed, as traveling men have just started out; collections worse than have been known for years.

Corn-planters, Hay-loaders, etc.: Deere & Mansur Co., manufacturers of corn-planters, hay-loaders, hay-tedders, hay-rakes, etc., etc., report 1895 trade much larger than usual; prices no higher; running full time; outlook for spring trade good; travelers now on the road soliciting for spring.

Tubular Metal Axles: Trade increasing; prices lower than last year; running full time; collections good and outlook bright.

Foundry & Machine Co.: Prices no higher than a year ago, but are paying more for raw material: running full time; collections good, with encouraging prospects.

Threshing Machines: Have manufactured many more machines this year than ever before and sold out all clean; will be running full time again within two weeks; cost of material higher than last year, but selling prices no better.

Pumps: Red Jacket Pump Co. report 20 per cent. increase in business compared with last year; are running full time, and are kept very busy filling orders.

We hope to meet you and many of the Hardware dealers and manufacturers at the meeting of the National Hardware Association, at Pittsburg, on the 20th inst.

SICKELS, PRESTON & NUTTING CO.

THE COLUMBUS TRADE.

Trade is holding up remarkably well, and should through this month, especially if we have a continuance of the fine weather we have been having during the past few weeks. This is ideal sportsman's weather, and the old question of "Which would you rather do or go fishing?" can be promptly answered by saying, "Fish, of course." It is too bad that we cannot shut up shop and hie ourselves off to some sunny spot by the side of the gurgling brook and spread ourselves on the grass and patiently wait for a bite until noon—and then open up our lunch basket and get one. But we find it necessary to fish for trade, and also use our best bait. Prices, with few exceptions, are firm. The inevitable has come in the Tack business, and the expected drop in prices has come. A little over a year of "fat" for the manufacturers. The trouble with American manufacturers is that they want to get fat too fast. They are willing to go on a long fast, and then, when they get an opportunity, they gorge themselves. When a number of persons get too much of a good thing, some one is sure to become dyspeptic. Every one knows that a man, or set of men, in that condition are hard to manage. It would be much better if they were satisfied with good, steady diet. There is no good reason why manufacturers should not make a reasonable profit from year to year, but they seem to prefer a feast or famine. If we can read the signs of the times correctly, we think some other lines will take a tumble. How much better it would be for all concerned if we could have a more uniform market.

SMITH BROS. HARDWARE CO.

THE ST. PAUL TRADE.

The approach of winter and the accompanying cold weather is having a stimulating effect on the Hardware trade. The demand for seasonable goods is large, being far in excess of what it was at a corresponding time last year. The same condition exists in such kinds of builders' Hardware as are needed to close up the season's business in that line. Prices of nearly all kinds of farmers' produce continue to rule very low, and as a consequence they are not sent forward as they otherwise would be. Notwithstanding this, collections are reasonably satisfactory, and without doubt the average country dealer will, by the first of January next, be nearer out of debt than he has been for two years past. The prospect now is that the business for the month of November will be quite satisfactory.

C. W. HACKETT HARDWARE CO.

THE PHILADELPHIA TRADE.

The remarkable weather still continues, and at the date of this writing we are having a most decided spell of Indian Summer, and it is hard to realize that we are within three weeks of Thanksgiving Day, and that some portions of the country have already had a blanket of snow. Such mild weather naturally has its effect on trade, which is still in a waiting mood although a fair volume of goods is moving, and it is pleasant to report that the volume of business continues larger than last year and we are all hopeful of the future.

Prices have continued without marked changes, although there is still a tendency on the part of the many manufacturers to advance prices, and such lines as Tools, which are everywhere recognized as being sold at cost of production, will probably respond to the increased cost of material before long.

The market for fancy goods is in good shape, and despite the weather Skates, Cutlery and so forth, are moving in a fair volume and dealers are preparing for holiday trade.

Samples of '96 Bicycles are beginning to make their appearance and the improvement in style and finish is quite apparent while prices remain about the same.

Collections are only fair and the money that is being paid out for wages seems to be used, according to current report, in paying up old debts which have been incurred during the stoppage of manufacturing. This money is now finding its way into the avenues of trade and better collections are expected in the near future.

BIDDLE HARDWARE CO.

THE TOLEDO TRADE.

Trade for the month of October in this section has been very satisfactory, although there has not been the *great boom* which some had thought we would have this fall. Trade has been mostly on seasonable goods that are wanted at this time of the year, such as supplies for stoves, house furnishing goods and stoves.

There has also been quite a heavy demand for builders' Hardware and glass. The volume of business has been considerably more than for the same month of 1894, although it must be taken in account that values on staple goods are considerably higher than they were a year ago.

We also find that manufacturers are filling orders more

Digitized by Google

promptly than formerly, as they are no doubt caught up with their orders that the *jobbers have speculated* in. We find, from inquiry, that jobbers are carrying large stocks, and we do not think that the manufacturers will be burdened with orders for prompt shipment for the next two or three months.

Collections are not what they ought to be. Owing to the low prices of farm products, farmers do not care to sell their wheat and corn, holding them for higher prices, which higher prices we do not believe they will succeed in getting; this makes the country merchants hard up. In general, the country merchants have a great deal outstanding on their books, and therefore are not able to pay accounts promptly.

Judging for the future, we expect that we will have quite a fair trade in Hardware lines, but do not anticipate anything extraordinary.

As regards to price, on some goods we are able to sustain the price, but on other goods we notice there is more or less shading, such as poultry netting, wire screens, screen doors and windows and numerous other lines. We think it will be rather hard to get a general advance on all lines of goods.

We do not anticipate a very heavy holiday trade, although if the good weather continues we shall still have a good builders' Hardware trade.

This section needs rain very badly, and we hope that the heavens will soon loosen and give us a thorough good drenching. THE STOLLBERG & CLAPP CO.

THE OMAHA TRADE.

The last half of the month has been comparatively uneventful in this locality. Unusually mild weather has to some extent checked the demand for seasonable goods, and, while a fair volume of business has been done, it has not reached the point it would, had more seasonable weather prevailed. Nails are in active demand, but Barb Wire is sluggish and the demand is quite below the average for this season of the year. Some grain is going forward, even at the extremely low price prevailing, which improves collections to some extent, but there is still room for material improvement in this direction. Until the purchasing power of our produce reaches a higher point than at the present time no great increase in business can reasonably be expected. RECTOR & WILHELMY CO.

THE PITTSBURG TRADE.

The rain which visited this locality lately, was of great benefit to the farmers, but not enough to raise our rivers, which remain in a very dried up condition. Senator Quay's recently promulgated idea to enter into a national improvement of all important waterways, to be pushed to speedy completion, and paid for by an increased protective duty on sugar and a few other items, strikes us as a wise

and truly American policy, which we hope to see carried out.

October gave us a fairly good record of sales in jobbing Hardware, but there is not that "go" to business that we had in the Spring. Collections in some sections are rather slow, but may be said to be up to the usual average. Our manufacturers are preparing to entertain the National Hardware Jobbers Association, at their meeting Nov. 20th, in this city. A large attendance is expected.

LOGAN, GREGG & CO.

THE BUFFALO TRADE.

Business for October has been very satisfactory, sales having exceeded the corresponding month of some years past, and we feel that this condition will exist throughout the season.

Stocks are low, and the trade are compelled to buy, and even though their purchases may be small, their frequency for regular goods, and usual orders for seasonable lines will, we believe, bring very satisfactory results.

Collections are not as we should like to see them, yet on the whole are somewhat better than they have been.

Few and important changes in prices have taken place during the past month, being well maintained excepting on some lines for Spring delivery.

It is with regret that we note this latter fact, and sincerely hope that the practice will be speedily discontinued. Unsteady or cut prices have a demoralizing effect, and are most undesirable for all concerned.

Fair steady prices are preferable, and are profitable for manufacturers, jobbers and retailers.

WEED & CO.

The Dangler Stove & Mfg. Co., Cleveland, Ohio, devote page 85 of this issue to a detailed statement as to the character and value of their new article—the "Gem." It surely seems to be all that the name implies, and is very certain to be counted among the successful things of this season.

H. G. Higgins & Co., No. 19 Pearl Street, Boston, Mass., have issued a price list of Hickory Handles, manufactured and sold only by themselves. They explain that they "are not in the combine," and give extended lists and prices of their full line.

The premises occupied by the Simmons Hardware Co., St. Louis, Mo., are to be remodelled. New electric elevators and electric lights and a heating plant will be put in, and other improvements made that will cost in all $30,000.

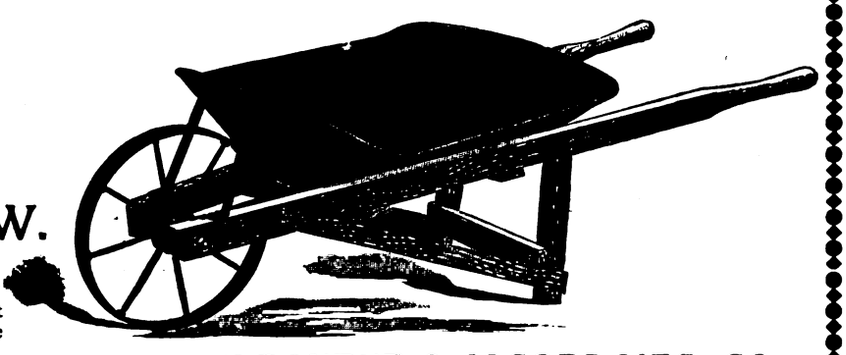
Articles of incorporation have been filed by the Mexican Welsbach Lamp Co., Camden, N. J. The entire capital, $100,000, has been paid in.

Hardware Dinner for 1896.

At a meeting of the board of governors of the New York Hardware Club, held on November 8th, it was, on motion of Mr. Van Glahn, decided that a Hardware trade dinner should again be held during the coming winter. The question as to time and exact date was left for later consideration.

The following gentlemen were unanimously elected to membership in the Club:

Herbert M. Howes, Boston *Globe*, Boston, Mass.
R. S. Peale, Chicago.
Miles Vernon; Vernon Bros., No. 69 Duane Street.
James A. Hill, No. 44 East Fourteenth Street.
W. F. Richards, No. 59 Reade Street.
E. Holden Spear, Metuchen, N. J.
Paul Gumbinner, No. 54 White Street.
L. B. Whymper, manager Crawford Mfg. Co., No. 72 Reade Street.
H. E. Hooper, Chicago.
Marshall L. Davidson, No. 43 Keap Street, Brooklyn.
Frank M. Brooks, No. 132 Reade Street.



They Endorse the Saddle.

The Automatic Cycle Seat Co., of Grand Rapids, Mich., must have a good thing in their saddle, else they could not have been favored with the numerous glowing testimonials which a glance at their letter book shows. For instance, Dr. M. A. Walker, of Denver, Col., writes: "Received your saddle and put it on at once. Am very much pleased with the saddle, as it certainly does away with the harmful pressure exerted by most other saddles. Another doctor of this city has been riding one for some time and reports very favorably of it." Dr. W. T. Dodge, Surgeon to St. Mary's Hospital, Big Rapids, Mich., adds: "I like your saddle very much; it is made on the correct principle." Dr. F. J. Groner, Grand Rapids, Mich.: "After practical experience with your saddle I give it the highest endorsement. It is the only common-sense saddle that I have seen, as it entirely relieves the sensitive parts." Dr. J. H. Miller, Pana, Ill.: "The old style saddle is very hurtful to riders from its pressure on the prostate glands, etc." John M. Hanscom, Sporting Goods, Ridgway, Pa.: "Please send us as soon as possible one Automatic seat; the other one was duly received and customers like it very much." These are but a few from the many received of a like import.

On page 49 of this issue will be found a card from H. G. Higgins & Co., No. 19 Pearl Street, Boston, in which they state that they are in the field for good agencies. Manufacturers who desire to be represented in New England, will do well to confer with them.

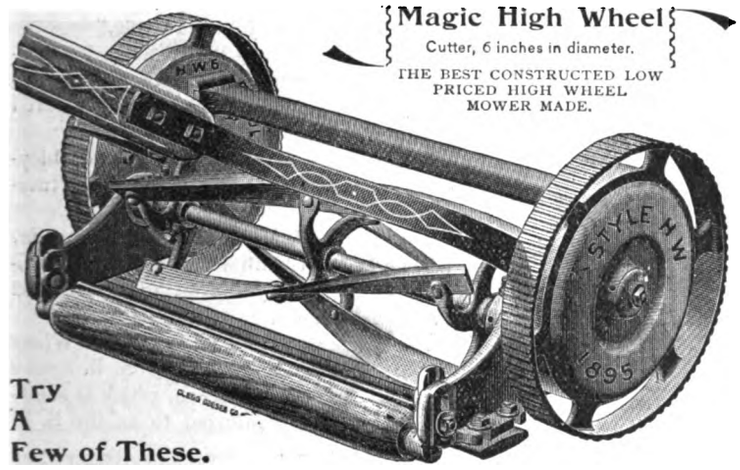
THERE is always a time in the career of every business when Quality and Finish is necessary to build up and maintain your business.



Has this time yet come to you?

It has if you wish to continue the confidence your customer has placed in you. The more competition you have the better ought to be your line of Barrows.

Thoughts and Ideas are valuable, but to maintain the intelligent effort, your goods must maintain a high quality and a moderate price. **THE CHAMPION BARROWS** possess all the above. What more can you ask?

BICYCLE TRADE RECORD.

Bicycle manufacturers and dealers, the country over, are requested to contribute to this page. News of new stores, changes, improvements, etc., will be gladly received, and promptly published.

New Companies, Stores, Etc.

Amesbury, Mass.—The Amesbury Carriage Co. are making preparations for the manufacture of a high grade bicycle.

Boston, Mass.—E. T. Ross, of the Wholesale Cycle Co., of Milford, Mass., will withdraw from that company and open bicycle store at No. 336 Columbus Avenue. He has been appointed New England agent of the Gendron, Reliance and Holliday bicycles.

Buffalo, N. Y.—The Iroquois Cycle Mfg. Co., incorporated by Wm. H. Hansberger, Wm. F. Dunberger and E. Schlerker, of Buffalo. Capital stock, $10,000.

Cheyenne, Wyo. — The Wyoming Cycle Co. are preparing to occupy the Tribune Building, on Ferguson Street, as a manufacturing plant.

Chicago, Ill. — Arnold Schwin & Co., butchers, will engage in the manufacture of bicycles, and will equip a factory corner of Lake and Peoria Streets. This concern is a corporation, with a capital stock of $75,000, fully paid. The firm will manufacture 5000 wheels a year.

Chicago, Ill.—Davidson & Son, marble workers, reported to be preparing to commence the manufacture of bicycles.

Chicago, Ill. — The Standard Cycle Co. has been incorporated by C. H. Poppenhausen, William J. Garvy and Bert Jennings, to manufacture cycles. Capital stock, $25,000.

Cincinnati, Ohio.—The F. J. Meyers Mfg. Co. is making preparations for the manufacture of bicycles.

Des Moines, Iowa.—The Hann Bicycle Co. has been incorporated by Francis Smith, G. W. Madison and C. L. Van Cott, to manufacture bicycles and bicycle sundries. Capital stock, $10,000.

Detroit, Mich.—The Bicycle Co., Limited, has been incorporated by Jas. J. Nolan, Geo. K. Kelsea and Frank T. Caughey, to manufacture bicycle specialties and obtain patent improvements. Capital stock, $2000.

Detroit, Mich.—The Bicycle Specialty Co. has been incorporated, with a capital stock of $2000, to manufacture and sell bicycle specialties.

Grand Rapids, Mich.—The Sligh Furniture Co. held stockholders' meeting and decided, by six thousand votes against none, to take up the manufacture of bicycles. The company is now in the market for the best machinery for this purpose. Several grades of machine will be made, including a high grade.

Kensington, Conn. — H. Martin and John G. Gibson, of Buffalo, N. Y., will establish a factory for manufacturing a high grade bicycle, employing 100 men.

Lebanon, Pa. — David Brightville has commenced the manufacture of bicycles.

Little Falls, N. Y.—Snyder & Fisher have commenced manufacturing bicycles. Their wheel will be known as the S. and F., and will be sold for $50.

Lockport, N. Y.—The Imperial Cycle Co. has been incorporated by Lewis Schollkampf, Wm. J. Voorhees and Joseph A. Dietz, of Buffalo, N. Y.; Wm. H. Hall and Elmer D. Woodcock, of Lockport, to manufacture bicycles. Capital stock, $10,000.

Milwaukee, Wis.—J. W. Wernken, appointed agent for the Thistle bicycles. Until recently he was manager of Buze, maker Bros.' cycle department.

Milwaukee, Wis.—The Chief Mfg. Co. is preparing to manufacture bicycles, and is perfecting its factory arrangements.

Newark, N. J.—The Folding Bicycle Co. has been incorporated by Lewis F. Curtis of New Milford, Conn., and Frank Hughes, and Michael Ryan, of Bridgeport, Conn., to manufacture a newly patented folding bicycle. Capital stock, $100,000.

New Orleans, La.—Rice, Born & Co.-Hardware, have added a bicycle department.

New York, N. Y.—The Marshall Bicycle Pump Co. has been incorporated by C. B. Boynton, Newark, N. J.; E. W. Dickinson and A. D. Marshall, of New York City, to manufacture bicycle pumps and bicycle attachments. Capital stock, $5000.

New York, N. Y.—The Phillips Mfg. Co. has been organized to manufacture the Phillips wheel.

Peoria, Ill.—The Peoria Rubber & Mfg. Co. has been incorporated, with a capital stock of $200,000, to manufacture bicycles. Erection has been commenced on the necessary factory buildings, and these are under contract to be completed within sixty and ninety days.

Pittsburg, Pa.— The Bindley Hardware Co. will add a bicycle department. Contracts have been made for several leading wheels, and the company will prepare for distribution among the trade a special bicycle catalogue.

Portland, Me.—The Brockton Power Co. has been incorporated, with George F. Morse, of Boston, as president; Wilbur I. Bishop, of Lowell, as treasurer, to manufacture, buy and sell bicycles and parts of same. Capital stock, $1,000,000.

San Francisco, Cal. — Pacific Coast Bicycle Co. has been incorporated.

South Portland, Me.—The Lovell Bicycle Works have commenced operations with a force of fifteen men, engaged in making the necessary tools for bicycle manufacturing. Work will shortly commence with about 200 men on an order of 6000 bicycles.

Toledo, Ohio.—J. H. Young, of Chicago, is preparing to establish a bicycle factory. Operations are to begin immediately, employing a large force of men.

Toledo, Ohio.—The Nelson-Hubbell Bicycle Supply Co. is the name of a new firm which has commenced business at No. 342 Summit Street. The firm is composed of Robert E. Nelson, of the wholesale jewelry firm of Robert Nelson & Co., and Mr. Hubbell, of the Second National Bank.

Toledo, Ohio. — Wilson & Soars, box manufacturers, announce their intention of erecting bicycle manufacturing plant, capable of turning out 1200 wheels the first year.

Waltham, Mass.—The Waltham Mfg. Co., manufacturers of the Orient Cycle, will open offices and show room at No. 240 Broadway, New York City, with James S. Holmes, Jr., as manager. The company are preparing to manufacture the L. A. W., which they interpret as being the Leading American Wheel. The sprocket will carry the letters L. A. W., also the wings, being similar in appearance to a large L. A. W. pin.

Washington, D. C. — J. A. Thorn and George E. Shaw are preparing to commence the manufacture of bicycles, turning out a medium grade wheel, and catering specially to the Southern trade. They will purchase new and modern machinery.

Changes and Removals.

Fitchburg, Mass. — The Iver Johnson Arms & Cycle Works, manufacturers of bicycles, firearms and sporting goods, will hereafter market their cycles under the name of the "Iver Johnson Cycle."

Kalamazoo, Mich.—The Rhodes-Bartholomew Bicycle Co. will remove its plant to Allegan, Mich., that place having offered a bonus for $3000 and a factory site.

Leadboro, Col. — Brown & Wood, bicyclists, reported to have dissolved partnership.

Lyndhurst, N. J.—McKee & Harrington, who make the Lyndhurst Bicycles, have removed their factory to Nos. 173-178 Grand Street, New York.

Rochester, N. Y.—The Rochester Wheel Co. has removed to Brockport. S. B. Robey is proprietor of this concern, which is sometimes erroneously referred to as the S. B. Robey Wheel Co.

Syracuse, N. Y.—L. C. Smith Tire Co. reported sold out to Spaulding Bros. Will remove the business to Chicopee Falls. Improvements are to be made on the tire.

New Goods and Improvements.

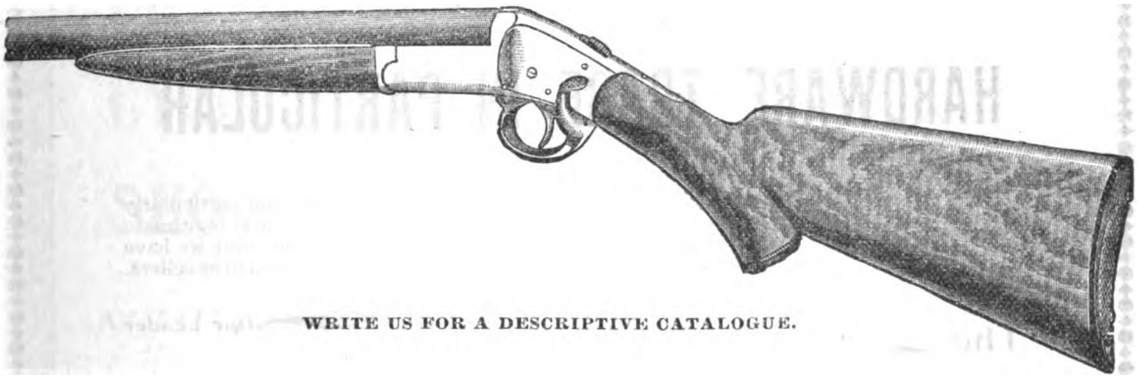
Buffalo, N. Y.—Frank Miller & Co., bicycle manufacturers, will largely increase their manufacturing facilities, and besides manufacturing bicycles, will manufacture hubs and handle-bars.

Buffalo, N. Y.—The Mercury Cycle Works are completing the erection of a new factory and will move into it about November 1st. The capacity of their new plant is between 5000 and 8000 wheels.

Freeport, Ill.—Stover Bicycle Works have doubled their capacity, which now is 12,000 bicycles a year.

Mukwonago, Wis.—The Mystic Bicycle Co. has increased its capital from $10,000 to $25,000.

Toledo, Ohio.—The Colton Bicycle Co. will largely increase the facilities of their plant, and are now engaged in putting in much additional machinery.



Recent Fires.

Corning, N. Y.—Harry G. Reynolds, bicycles, damaged by fire.

When you begin handling bicycles

One of the important things for you to do is to find the pneumatic tire which has the most friends. When you have found it, stick to that tire. It will be well for you to know that more than sixty-five per cent. of the total tire business is done by Morgan & Wright, Chicago. They have a guarantee which guarantees. They know how to take care of their customers. You have often seen their trade-mark—

MORGAN & WRIGHT TIRES ARE GOOD TIRES

Our 1896 Jobbing Line is now ready.

Our Defiance or jobbing line of bicycles, including 24, 26 and 28 inch wheels for both children and adults, is ready for inspection, and our travelers are now on the road. Defiance bicycles are made of the very best bicycle material, by the most skilled bicycle mechanics, in the finest equipped bicycle factory in the world. They are strictly up-to-date, and in beauty of design and finish, in lightness, strength and speed, they are particularly prominent.

DEFIANCE

bicycles are made by the makers of the Monarch, the best bicycle in the world, which is sufficient guarantee of their excellence. We invite correspondence from dealers and jobbers. As we have already closed several large contracts, and are daily closing others, delays are dangerous. Our largely increased manufacturing facilities will enable us to make prompt delivery, a most important consideration, as many dealers who contracted with small manufacturers for this season's trade know to their sorrow.

Honest Money

Ought to buy Honest Screens

The New Flyer Window Screen

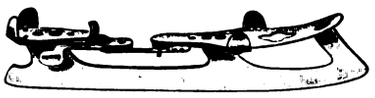
Made a wonderful run the past season. There is something about it that pleases everyone—Jobber, Retailer, User. Probably there were never so many screens of a kind sold in the same length of time.

That the goods gave splendid satisfaction is evidenced by the fact that the largest buyers of last season have already bought in large quantities for '96. There never was a handsomer screen, nor one with easier, larger adjustment or fewer obstructions or objections.

In Wing Screens

Our improved forms of the Bonanza and Perfection patterns will not be excelled in beauty or utility.

The New North-west Window Screen Frame takes well, and
The Phillips Improved Frame holds its own.



The Machine Work on Phillips' Goods

Is done on the best machinery and by experienced workmen and not by children.
The goods ought to be—and are—the smoothest and best made.

FOR GOOD ADVERTISING.

$100.00 CASH PRIZES,

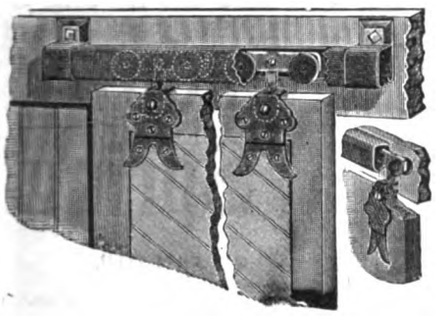
THIS Christmas our assortment of electrotypes is both better and larger than ever before. We shall not only take pleasure in sending them free, same as heretofore, but have also decided to offer three cash prizes for the three best advertisements of Bissell sweepers as

CHRISTMAS GIFTS.

First Prize, ...	$50.00 in Cash
Second Prize, . . .	30.00 in Cash
Third Prize, ...	20.00 in Cash

THE electrotypes cost you nothing. They will be sent to you charges prepaid. You must advertise something. Why not carpet sweepers? There is not a more popular lady's Christmas Gift in the world than a BISSELL SWEEPER, and they are just as profitable as they are popular. It costs you nothing to try. You are certain of a good profit on every sweeper you sell, and if your "ad" wins it is a neat sum easily earned.

INFORMATION.



1.—The SAME electrotype will be sent to but one dealer in the same town and will be mailed to the first dealer who orders it.
2.—A copy of each newspaper containing each "ad" must be mailed to the Bissell Carpet Sweeper Co., Grand Rapids, Mich.
3.—No advertisement will be received after December 31st, 1895.

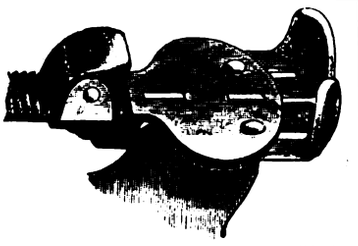
PECK & SNYDER'S NEW AMERICAN CLUB SKATE.



Peck & Snyder's NEW AMERICAN CLUB SKATE for 1895 has revolutionized the art of skate making. New American Club represents an entirely new heel clamp that will fit any heel instantaneously. The old method of clamping to the heel is entirely done away with. It cannot slip, is stronger, acts instantaneously, no screwing or adjusting necessary, saves time, and is without question the most perfect heel clamp ever invented.

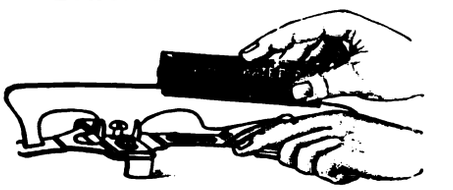
MADE IN FIVE GRADES.

Peck & Snyder's New American Club Skate is the most perfect skate ever constructed. It has simplicity of adjustment, solid foot plates, solid heel clamps, and will fit any heel.

The Clasps Cannot Slip. Sure Grip. Thumb Screws and Sets entirely disregarded. It is Light, Handsome, and Twice as Strong as the old club skate.

HERE'S THE NEW CLAMP.

Ask your jobber to show you samples of the **"New American Club."** If he doesn't carry them, send direct to us for samples and prices. Handsomely illustrated catalogue of this skate mailed on application. Address



A. G. SPALDING & BROS.,

BEST AND CHEAPEST

STONE WATER FILTER

ON THE MARKET.

Tripoli Stone Block System.

Set up ready for use. There are two crocks, each of four gallons capacity—an upper one holding the Filter Block, and the lower one, which can be used as a water cooler if desired. This Block is four inches in diameter by the same in height, and is hollowed out on inside. This fits on a metal tube, which fastens by means of a nut to bottom of Filter Jar. Block can be lifted off tube, cleaned and replaced in two minutes, and with no trouble at all. Water passes from outside of block, through the walls, into the hollow chamber, and from thence, by the means of the Drip Tube, into the lower receptacle.

The Finest Piece of Salt Glazed Stoneware Ever Offered the Public.

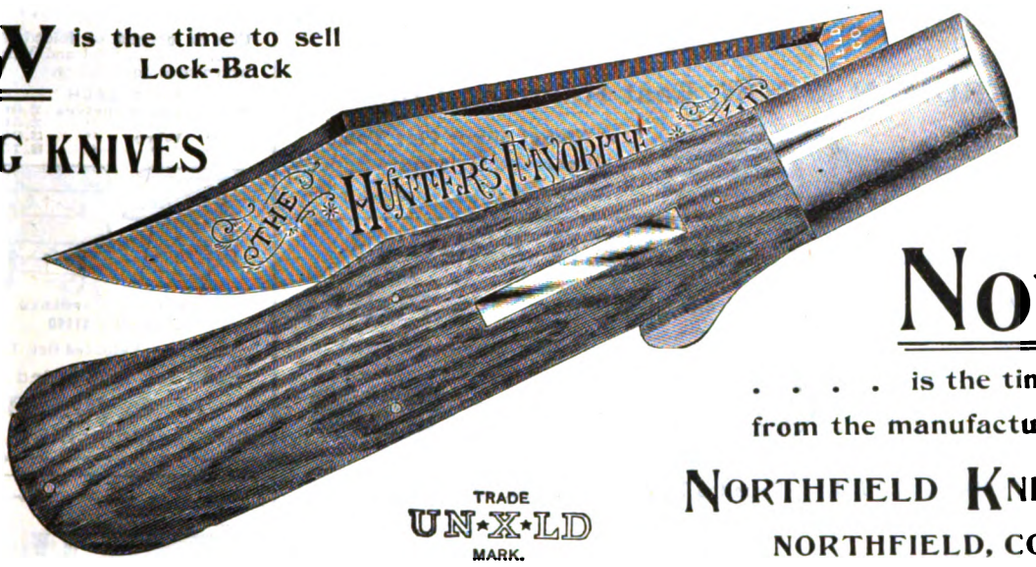
ONE REASON WHY

Our business has grown out of all proportion to any other manufacturer of

CUTLERY IN THE U. S.

Is that while our goods are unsurpassed in finish and general appearance our special aim has been to adapt them to the purpose for which they are to be used.

In the matter of Carvers, your customer wants a Knife to cut with as well as to look at. All our Carver blades are made from carefully tested Butcher Knife Steel. They take and hold a fine cutting edge.



We also make Table Knives, Butcher Knives, Shoe Knives in great variety. All fully Warranted.

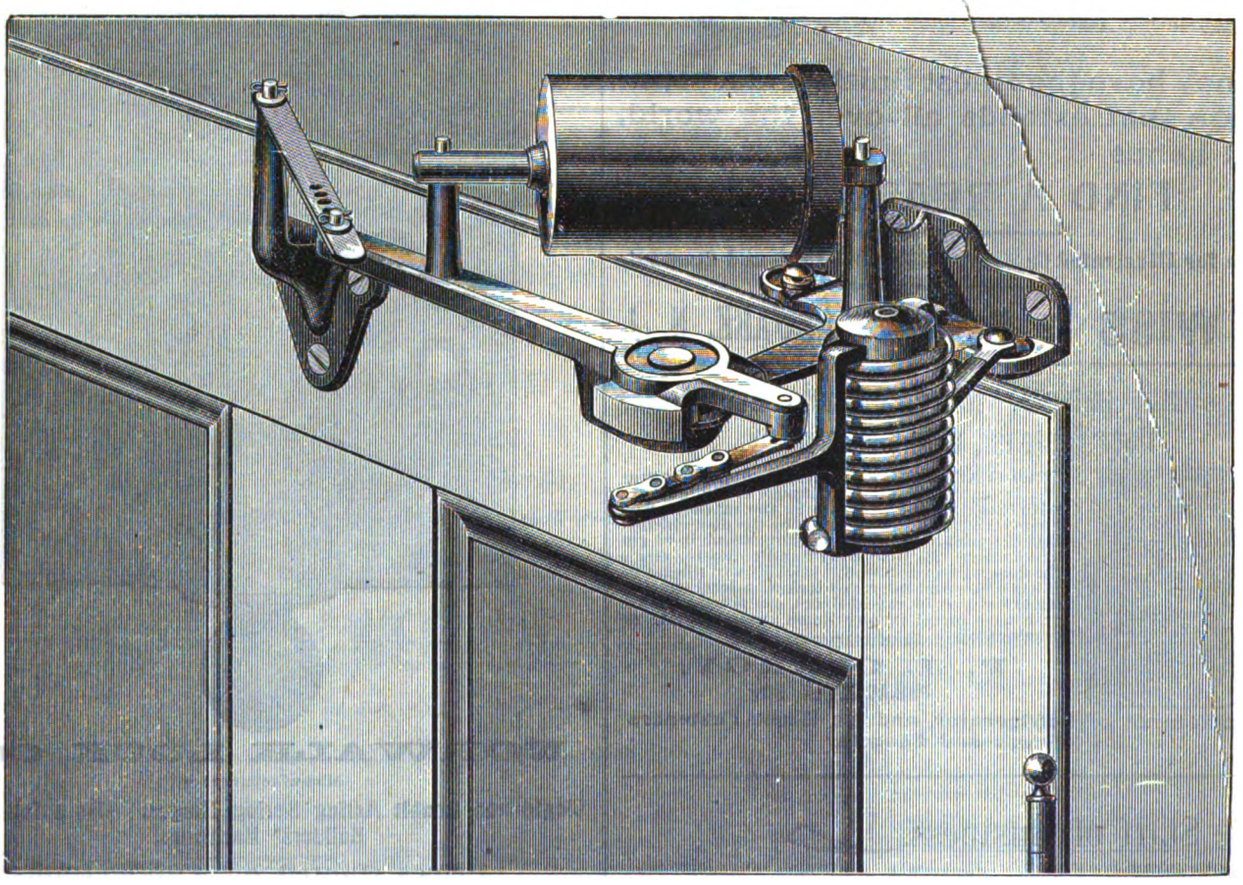
MYERS & BRO. ASHLAND, O.

WE PAY THE FREIGHT.



Instead of trying to crowd our goods upon an unwilling market the past two years, we have been working for better processes—to make **better goods for less money,** and now "we have got there with both feet." Our **pails are larger** than other makes, yet **cost no more.** Made of **strong fiber, wound,** and **steel bound,** they don't split open, nor chip off at edges. They have a **chime** you can **catch on** to, and a truss bottom that don't warp, loosen or leak.

All "Standard" Pails, Slop Jars, Spittoons, Wash Basins, etc., are **water-proofed** and **indurated throughout** by our newly applied process, and are **absolutely unsoakable.**

An **Ebony enamel,** hard and smooth, gives "Standard" ware an **attractive** appearance, and a **durable** finish. **Scores of families** in every county will use it largely if it can be got "at the store." **Do you want their trade?** Lots of 100 lbs. or more, delivered f. o. b. cars, at their depot, to all responsible dealers.

TEMPORA MUTANTUR ET NOS MUTAMUR IN ILLIS.

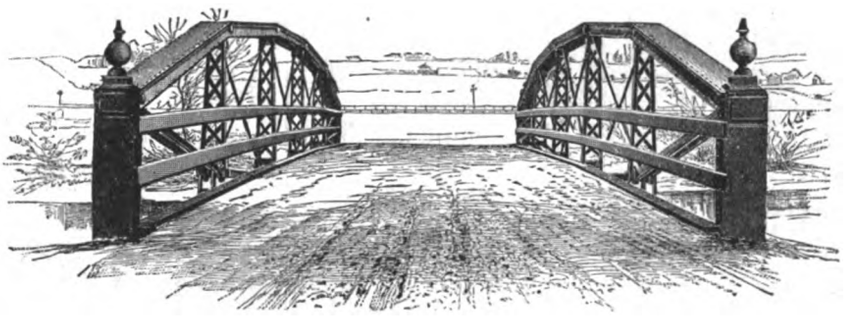
ALFRED FIELD & CO., 93 Chambers Street, New York.



The above illustration is taken direct from a photograph, and shows the interior construction of an Iron Casting Shop designed and built by us for the Waterbury Brass Co. at Waterbury, Conn. The building is 52 feet in width by 110 feet in length, and built entirely of iron; that is, iron sides and iron roof. The danger from fire in a brass casting shop is very great, and a construction of this kind eliminates this danger entirely.

THE BERLIN IRON BRIDGE CO.,

Engineers, Architects and Builders of Iron and Steel Buildings, Roofs, Bridges, etc., etc.

All Gems, Nothing But Gems,

FOR THE SEASON OF 1896.

This is the unanimous verdict of over **Thirty Thousand** householders throughout the **United States,** who pronounce the **"Gem"** as the only . . . . . .

Absolutely Safe

Vapor Stove EVER MADE. POWERFUL and ECONOMICAL, using less gasoline than any other Vapor Stove doing the same amount of work. The price is SO LOW that it comes within the REACH of ALL who appreciate the value of a . . . .

Convenient, Labor-Saving Cook Stove.

To All Such We

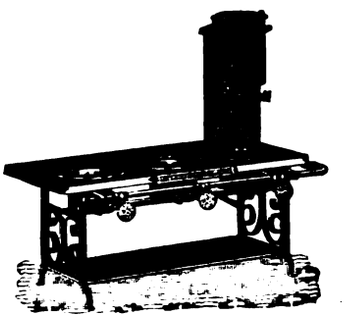
recommend the GEM, and it would be greatly to the interest of all who intend to handle VAPOR STOVES the coming season to secure, if possible, our line of GEMS for their trade, as we have but one agent in a town.

Gem Gasoline Heater.

We Make Nineteen

different sizes and styles of the GEM Stoves, including the low JUNIORS, MEDIUMS, FULL SIZE, and a COMPLETE LINE of CABINET RANGES, as well as our celebrated

Gem Gasoline Heater.



A Word of Caution

On account of the MERITS and GREAT POPULARITY of the GEM STOVES, other manufacturers may seek to IMITATE. REMEMBER that EXPERIMENTS are EXPENSIVE, and there is but ONE GEM, and that can only be made by us, and is covered by Strong, Fundamental Patents, and any attempt to infringe will be Vigorously Prosecuted.

We also continue to make a full line of PROCESS as well as GENERATING STOVES of all styles, together with a Complete Line of GAS RADIATORS, HEATERS, RANGES, etc. . , .

APPLY EARLY FOR AGENCY.

44 Cliff Street, NEW YORK.
148 Lake Street, CHICAGO.
Factories: GEORGETOWN, CONN. CHICAGO, ILL.
ESTABLISHED 1818.

THE OLDEST AND LEADING MANUFACTURERS OF GALVANIZED WIRE GOODS IN AMERICA.

"Pennsylvania" Fruit Picker

This Cut almost speaks for itself—the device being so much like the human hand, shows at once the utility of the article.

PATENTED.

AS A FRUIT PICKER IT HAS NO SUPERIOR.

It is made of Heavy Galvanized Wire, and Easily Adjusted to a Pole. It has been sold for several years, and the demand (as it is becoming known) is steadily increasing. The difficulty of detaching fruit and securing it unbruised is apparent to everyone so engaged. This overcomes the difficulty, and saves the finest fruit which commands the highest prices.

THE LOW PRICE AT WHICH IT IS SOLD

Brings it within the reach of those who have but little fruit to gather as well as those who have large quantities. **Price, per doz., $6.00. Liberal discount to dealers.** It will gather Apples, Peaches, Pears, &c.

—MANUFACTURED BY—

Pennsylvania Wire Works,
EDWARD DARBY & SONS,

233 & 235 ARCH STREET, PHILADELPHIA, PA.

IMPROVED
Labor-Saving
CARPENTERS' TOOLS.

STANLEY
RULE & LEVEL CO.

ORANGE SPORTING POWDER, MANUFACTURED BY LAFLIN & RAND POWDER CO.

ORANGE RIFLE EXTRA, ORANGE SPECIAL, ORANGE DUCKING, ORANGE LIGHTNING.

The attention of TRAP AND FIELD SHOOTERS, RIFLEMEN AND DEALERS IN GUNPOWDER, is called to the new ORANGE SPORTING POWDER, patented April 17th, 1888, and branded **ORANGE RIFLE EXTRA.**

This Powder is quick and strong, and burns with such perfect combustion that the only residum left in the barrel after shooting is a dark oily substance easily removed While this Powder is not exactly SMOKELESS, it gives only a light bluish smoke, which is almost instantly dissipated, and interferes but little with the shooting of the second barrel, taking the place of the so-called smokeless powders in this respect.

This brand of powder sells at the same price as any other brand of Rifle Powder and is superior to any made. No person who shoots can afford not to give it a trial, as after once trying it he will never use any other Powder when he can obtain the ORANGE EXTRA. Weight and quality guaranteed.

MILITARY, MINING AND BLASTING POWDER.

LAFLIN & RAND POWDER CO., 99 Cedar Street, New York City.

"THEY TAKE THEM ON SIGHT."

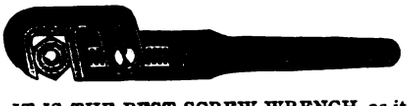
That's how a large Hardware dealer describes the appreciation of his customers in regard to our **Gate Hinges** and **Latches, Blind** and **Shutter Hinges,** and **Frame Pulleys** of the **"Original" Clark** and other patterns formerly sold by the **Shepard Hardware Co.,** of Buffalo, N. Y., whose business in these lines we have acquired by purchase.

☞We are the SOLE Manufacturers.

THE WRIGHTSVILLE HARDWARE CO., - - WRIGHTSVILLE, PA.

HALL'S IMPROVED PIPE WRENCH.

DO YOU SAY that this wrench will crush or cut the pipe? IT WILL NOT if you know how to use it. The principal cause of Pipe Wrenches crushing or cutting the pipe is because the GRIPPING POINTS ARE DULL. You can sharpen THIS WRENCH IN A FEW MINUTES on a



grindstone or emery wheel WITHOUT TAKING IT APART.

THIS WRENCH if kept sharp will grip high on the pipe, and you can screw a pipe so tight that it will open a malleable fitting, and strip the thread, WITHOUT CRUSHING OR CUTTING THE PIPE.

It is impossible to LOCK OR WEDGE THIS WRENCH on the pipe.

It will COST LESS FOR REPAIRS than any other Pipe Wrench.

IT IS THE BEST SCREW WRENCH, as it is stronger than any other, and by pulling the reverse way it will grip a nut or fitting and WILL NOT SLIP.

It is DROP-FORGED from TOOL STEEL.

Sam'l Hall's Son,
229 West 10th St., New York.

SURE ...TO PAN OUT.

The Excelsior Roasting and Baking Pan makes money for every dealer who handles it. To show it is to sell it, because its merits speak for themselves.

IT TAKES A PULL

to separate the plies of our rubber belting. A yoke of oxen can do it, but hard service won't, so strong is the friction. Our belting is uniform in width and thickness, consequently more of its surface comes in contact with a pulley. That means

NO WASTE OF POWER.

Rubber belting is never injured by water, hence it is best for out-door use, for wet localities, and for mills where the atmosphere is surcharged with moisture or steam, as in paper mills, tanneries, etc. Buy the durable kind, branded 1846-Para, Double Diamond or Carbon, made for 50 years by the

NEW YORK BELTING & PACKING CO. LTD

Toledo Wheelbarrow Works, Toledo, O.

The AMERICAN WICK is made on scientific principles. The gum inherent in the natural cotton is taken out, and no expense is spared to produce a wick that will give THE GREATEST ILLUMINATION.

THE

AMERICAN WICK

Made by the

WICK DEPARTMENT

Of the STANDARD OIL CO. of NEW YORK.

Oil drawn up through the AMERICAN WICK burns with a large, clear, white light and the flame does not drop off in size as it does when a poor wick is used. When the cotton is clogged with its natural dust and gum the full illuminating power of the oil is not obtained and the complaint is heard that the light DROPS.

Established, 1882. Capacity, 100,000 Tons.

Do You Desire

an article that every family would buy if they simply had their attention called to its merits? If you do, put in a stock of P & A's Banner Oil Stoves. See Cut.

Banner Oil Heater

SIMPLE, NOVEL and PRACTICAL.

Requires less care than the ordinary Lamp.

Will burn 10 to 15 hours and heat comfortably a room 15 to 20 feet square.

NO SMOKE! NO ODOR!
PERFECT COMBUSTION.

POINTS:

The Oil Fount is brass, handsomely embossed and highly nickeled. It holds one gallon of oil. As each fount is tested under steam pressure before leaving factory, there is no danger of leaking.

No Chimney. The drum of the **BANNER** in its construction acts as a chimney, saving the expense incident to the renewal of glass chimneys of other makes.

The Fount Frame is artistically made of wrought iron, making a solid base for the stove.

The Burner is the best made, and ONLY ONE with feeder wick, allowing all the oil to be consumed.

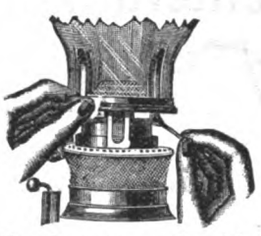
The Indicator shows at all times how much oil there is in fount.

The Flame is regulated with our ratchet wick movement, which allows the wick to be raised or lowered with nicety and exactness.

Lighting. It is not necessary to remove any part of the stove to light it. The sliding door in the drum is made for this purpose.

Draft. The round openings in the drum create great suction of cold air in addition to the regular draft. Double the radiating force of the ordinary stove is thus secured.

Get one for your Bed, Bath or Smoking Room, Library, Nursery, Office or Conservatory.



No. 971, Heater Complete. Height, 27 inches.

An Advertisement

If you have a sign over your door, you are an advertiser. The sign is intended to advertise your business to passers-by. An advertisement in a reliable Trade paper is only so many thousand signs spread over a great many square miles.

You can't carry everybody to your sign, but HARDWARE can carry your sign to everybody.

OUR STAR HACK SAWS

Are used in nearly all of the Iron Working Shops in this country and Europe. Now we wish to introduce them to the Farmers and Householders generally. They will cut Iron, Steel, and Wood equally well. One blade which costs five cents, will cut off an inch-square bar of iron 100 times without filing. They will do most of the work of a file at one-tenth of the cost All of our best blades are rounded at the ends and stamped with a star.

As a sample, we will send one Steel Frame and Six Blades by mail, prepaid, on receipt of $1.00. Or, they can be had of all the best Hardware Dealers, who usually keep a good line of our high-class tools.

The Annual Hardware Gatherings.

This is the season of the year when the various Hardware associations, following the custom of mankind from time immemorial, meet in annual business conferences, or in social gatherings. Elsewhere reference is made to the great gathering of the past week at Pittsburg. Special attention in this connection is called to a report elsewhere of a recent conference in Milwaukee, between the representatives of the heavy Hardware jobbing houses, and the officers of the principal organizations of manufacturers. As this meeting was devoted entirely to the discussion of business questions relating to the relations between these two great lines of Hardware, no publicity was, of course, given thereto. It is a pleasant feature of the situation, however, to be able to announce that the gathering was harmonious in every respect, and that in all likelihood the result will be more cordial relations and a better understanding between the manufacturers and the jobbers. It is in gatherings of this character, that is demonstrated the value of the fraternal and business organizations, which have so abundantly increased within the Hardware trade the world over during the past two or three years, and largely following the example set by the organization of the Hardware Club of New York. The results that have flown already from these gatherings and the meetings of these various bodies, have demonstrated beyond the possibility of question, their value as adjuncts to trade, and their tremendous influence in causing all lines engaged in the making or selling of Hardware, to better understand each other and to avoid those disagreements which come largely through misunderstanding and inability of the one to place himself, for a time, in the position of the other. There are so many ways in which a gathering like that at Milwaukee can be useful, that it is not necessary to refer to them in detail. A quotation of the titles of two of the papers there presented illustrates the central thought, one being "Relations that Should Exist Between Jobbers and Manufacturers," and another "The Necessity of United Action upon all Important Questions." The Milwaukee conference, the Pittsburg meeting, the annual gathering of the other great associations so near at hand, and the acquaintance and friendship made and cemented by these gatherings, are all in a direct line, and point to the one desired end. As we suggested some time ago, it is beyond question a fact that if some central point could be set up around which all of the Hardware associations and societies of the United States could rally for concerted action, and the carrying out of such measures as could be inaugurated for the general good, the result would be of immeasurable benefit to the entire trade. Why not have a general association or annual reunion made up of delegates from them all?

Mexico Falls Into Line.

Of expositions there are no end. Nobody wishes to see them end. They are object lessons of the world's civilization, of advances in the liberal arts, of the development of human ingenuity, of the methods employed by man to better his own condition, and do good to his neighbors. A great fair like that of Chicago reaches out with influences for good into the uttermost corners of the earth, and the most remote isles of the sea.

Mexico is one of the recent nations that have fallen into line. By act of the congress of our sister republic, it has been decreed that the Mexican Industrial Exposition shall be opened in the City of Mexico on September 15th, 1896, which, it is said, will embrace a representation of manufactured products from all parts of the world.

This is the first exposition of its kind ever held in Mexico, and the officials and citizens of that country propose to do everything that lies within their power to make it a success. It is thought by those having it in charge, that it will be the means of drawing to Mexico a great many buyers from the Southern republics, and thus secure to manufacturers a larger market than Mexico alone could offer, and that "the scenic attractions of Mexico will draw from Europe, from the West Indies and from the United States, a large number of persons who have heretofore spent their money in European travel, and who may be induced to alter their trips to our southern and sister republic."

The Hardware manufacturers of the United States will of course be well represented. They have a great deal to show, and the opportunity is too good to be lost.

Digitized by Google

Jobbers and Manufacturers.

An important conference was held in Milwaukee, Wis., on November 8th, between a large number of the heavy Hardware jobbing houses, and the officers of the principal organizations of manufacturers, such as those relating to bar iron, bolts and nuts, etc. As it was a conference merely, of course the proceedings were not made public, but the results are certain to be found in a more harmonious understanding between these two great lines. F. K. Maus, of Kelley, Maus & Co., Chicago, filled the chair, and W. C. Brown, of the same city, acted as secretary. The firms and companies represented were as follows:

Robert Donahue, Burlington, Iowa; S. D. Kimbark, Kelley, Maus & Co.; Parkhurst & Wilkinson, Chicago; Roehm & Davison, Detroit; Mossman, Yarnelle & Co., Fort Wayne; W. J. Holliday & Co., Indianapolis; Todd-Donigan .ron Co., Fulton, Conway & Co., Louisville; Shadbolt & Boyd Iron Co., Suelflohn & Seefeld, Milwaukee; Buford Bros., Nashville; Baum Iron Co., Omaha; Paddock-Hawley Iron Co., Sligo Iron Store Co,, Beck & Corbett Iron Co., Globe Floe & Iron Co., St. Louis; Charles E. Faeth Co., Sioux City; Nicols & Dean, St. Paul; Minneapolis Iron Store Co., Minneapolis; Sieg Iron Co., Davenport, and John Ernsdorff & Sons, Dubuque.

The visitors were entertained at a banquet at the Hotel Pfister, in the evening of the day named, by the local Hardware dealers of Milwaukee. The toasts responded to were as follows:

"How can we, as jobbers, secure the best results from the labors of our employees?" Charles R. Blake, president Sligo Iron Store Co., St. Louis.

"Relations that should exist between jobbers and manufacturers." Charles Roehm, Roehm & Davison Co., Detroit.

"Methods of computing profits and compensating traveling men." E. F. Yarnelle, Mossman, Yarnelle & Co., Fort Wayne.

"Necessity of united action upon all important questions." Robert Donahue, Robert Donahue Iron & Hardware Co., Burlington.

Cleveland Cycle in Europe.

Manager L. H. Bill, of H. A. Lozier & Co.'s New York branch, sailed for Europe on November 23rd, in company with Harry Lozier, and while abroad will arrange for an extensive exhibit of Cleveland Cycles at the Crystal Palace. Arrangements will be made to open a central office in London, and from there the interests of the Cleveland throughout Europe will be vigorously pushed. These wheels have met with such phenomenal success in France this year that an initial order for 1500 Clevelands has just been placed by the Paris agent.

Forksides for Bicycles.

The Ames Sword Co., Chicopee, Mass., are producing, at the rate of 1500 per day, a fine grade of brazed forksides for bicycles, and find the demand to be so great that their facilities for producing the same are taxed to their utmost capacity. They explain that they were called upon last season to make a few for trial by parties who had been disappointed on deliveries of stock, and they gave so much satisfaction that they made up some 15,000 to 18,000, and this season have their orders for their complete output. "We were also called upon by others, and have booked orders for this season's work for upwards of 150,000. Our forksides are made from a fine grade of cold rolled steel, which is manufactured expressly to our order for sword scabbards. We made them up on our scabbard tools, and find our sixty years' experience on swords and scabbards to be of great value to us in producing an article, which is not only of good shape and form, but one which retains all the good qualities for the purpose intended. Our forksides are light in weight, but possess great strength, and we hear nothing but praise from our customers, who cannot speak too highly of their excellent qualities. We have in the past been favored with large contracts for similar goods from the government, where the most rigid tests have been given for strength, and our methods of producing articles of this nature have been brought to a point of perfection that cannot be excelled by others who produce goods of this character."

Minor Note and Comment.

The Union Nut Co., No. 107 Chambers Street, New York, have taken the agency for the America wheel, manufactured by the International Mfg. Co., No. 192 South Clinton Street, Chicago. The territory includes a portion of New York and New Jersey and all of the metropolitan districts. The feature of this wheel is a truss frame which is said to be very strong. The Union Nut Co. will have samples displayed at the present quarters.

A corporation to manufacture a new hammerless gun, the invention of a young mechanic, is being formed in Baltimore. The lock is the new feature of the invention, and is said to be simple and strong. The gun will also be provided with two sets of barrels, one set choke bored and the other the plain cylinder pattern, with no increase in price.

The Syracuse Cycle Co., Syracuse, N. Y., announce: "That the American 100-mile tandem road record was broken on November 9th by A. A. Hansen and John Nelson, mounted on a Crimson Rim Tandem; time, 5:07:00. The Minnesota State record was also broken on this same occasion by Chas. Palm, mounted on a Crimson Rim; time, 5:19:00."

J. H. Sternbergh & Sons, proprietors of the bolt and nut works at Third and Buttonwood Streets, Reading, Pa., will shortly erect a rolling mill, 80x200 feet, at Fourth and Buttonwood Streets. The contract has been awarded to L. H. Focht. The building will be of brick and one story in height. A large number of men will be given employment.

The stanniferous, or tin-bearing area in New South Wales is estimated at five and a half million acres, or 8500 square miles. Up to the present, most of the tin has been obtained from the New England district. The value of the tin and tin ore raised in the colony and exported, from the beginning of 1872 to the end of 1894, was £10,257,850.

The National Screw & Tack Co., Cleveland, Ohio, announce that they have opened at Nos. 112–114 Lake Street, Chicago, an office and stock room, under the management of C. L. Weeks, at which place they will carry a complete stock of their various lines of manufacture, for the accommodation of the trade.

"The Progress Of The World" is a new monthly magazine devoted to history, politics, science, mechanics, commerce, agriculture, finance, literature, art and the drama. It is a bright, interesting and well edited paper, published in New York.

The tin-plate works of the Pittsburg Productive Co., New Kensington, Pa., will be enlarged. The addition will be a finishing mill, in which it is anticipated 4000 men will find employment.

E. C. Bennett, of E. C. Bennett Co., who sells the Remington wheel in New Haven, was entertained by Mr. Reville, of the Remington Arms Co., at the Hardware Club last week.

The consumption of camphor in the manufacture of smokeless powder is so large that the commodity has doubled in price.

PRACTICAL TALKS TO HARDWAREMEN.

DISPLAY CARDS.

An effective way to draw attention to small articles, is to select a piece of common white cardboard and mount the article upon it. Thus butcher knives may be advertised by taking a piece of cardboard 14x20 inches, in the centre lay a 12-inch knife, and run a pencil lightly around the handle, then cut out the part marked, and through the opening made part of the handle will protrude, thus making the blade lie nearly flat. On the reverse side paste a slip of paper over the handle and to the cardboard; when dry the sign may be suspended without the articles falling off. These signs should be hung, not only in the show window, but also in the store. The price should be plainly marked.

For a seasonable window sign select a pine board six feet long, 18 inches wide, ⅞ thick; paint both sides white. On one side paste paper shells arranged in the form of letters. Slips of paper, about a quarter of an inch wide, if pasted on the shells, will allow them to be glued to the board and read "Loaded Shells." The price per hundred may be indicated, by making the figures out of wads. On the other side of the board the words "Shot and Shell" may be made by using black smaltz to cover the letters in "powder," the fine grain very much resembling rifle powder. The letters forming the word "shot" may be made by boring shallow holes; pour in first a little glue and then the shot, using different sizes for each letter. This sign should be hung at right angles in the window, and from it the "leader" shotgun cartridge belts, hunting coats, etc.

A NOVEL WINDOW DISPLAY.

I had come nearly to the end of the main street of W———, and was slowly retracing my steps to the station, when my attention was attracted to the unique windows of a Hardware store just across the street. In one window there was what had been a case for displaying cutlery; the glass had been removed, leaving two shelves supported by a shaft running through their centres. There was nothing on the shelves, excepting a thick coating of dust, while in the bottom of the window, a razor strop, some sad irons, a few plated spoons and a trap with a live mouse in it, could be seen, as they were only partly covered by a dozen or so web-halters.

With a hasty glance at the other window I stepped inside, anticipating something interesting in store arrangement. There was no one in the store at the time, but through an open doorway I heard the sound of hammering.

Taking advantage of the situation, I photographed mentally the appearance of the interior of the store. Immediately before me, and blocking the passage, was an obstruction which I afterwards found to be a stove, but at the time it was covered with several dozen tin cans and fire shovels in original packages, to the depth of a foot or more.

In one nail bin were three coal picks and a double-bitted axe; in the next, one boot and a pair of overshoes.

The space not taken up by the stove was occupied by five or six packing boxes. Endeavoring to get across the room, I struck my shin against a corner of one of the boxes. This caused me to make an exclamation which brought the proprietor on the scene. As an excuse for entering I asked to be shown an oil heater I had seen in the second window. Lifting it out, he made a place on the stove to show it, by brushing tin cans and fire shovels on the floor. In reply to my question concerning the heating drum, he commenced a search which he abruptly ended by recollecting that he had loaned it to the milliner next door.

Not wishing to put him to any more trouble, I apologized for taking up his time, adding that as he was evidently opening up his store, he had been hindered in getting it in shape.

When he replied that he had been in business in that stand six years, I hastily bade him good-day.

CONCERNING MEMORY.

If in your business you would prosper,
Carry its motives close to your heart—
Eat with it, drink—sleep with your business!
Then will not mem'ry fail in her part.

When a man fails to keep an important engagement, he blames his memory, as though something apart from himself, and for whose failure he was in nowise responsible.

Too often men use their memory as they would a bag already well filled, but into which they desire putting something more—with the result that the last thing put in springs out, while the first is jammed in so tight, that if reversed, is so pressed out of shape as to be useless.

It is easy to remember where the heart is. If a man is interested in articles he is daily handling, their sizes and numbers come to him as matters of course. But to all men there comes a time when memory fails them, sometimes producing a chain of circumstances ending tragically or comically as the case may be.

A customer for roofing paper once forgot to take his can containing a gallon of coating. A painter coming in shortly after bought a can of putty which the clerk brought and placed on the counter, calling to the painter who had stepped to another part of the room. Just then the roofing customer came in breathless, picked up one of the cans and hurried out. The painter took the remaining one and also left. Pretty soon he came back screaming mad—such jokes wouldn't go down with him. We tried to pacify him, unsuccessfully, and were at a loss what course to take, when in came the roofer also mad. Then the mistakes were rectified. The painter exchanged his coating for the roofer's putty. The blame, properly chargeable to the roofer's memory, was put on the clerk, and our customers left in perfect good humor.

An old man used to come to the store selling mauls, which he made during the winter months. After the usual dickering, a bargain was made apparently to the satisfaction of all concerned; but the old man, instead of going as soon as he got his money, still hung around. The proprietor, however, bade him good-day and was on the point of going, when the man of mauls said he would like to have his money. The proprietor said that he had it—that he gave a check and that it was in one of the old man's pockets; these were turned inside out, the lie was passed, and the situation was getting interesting, when the proprietor insisted that the old man allow a third person to examine his pocketbook and make a complete search. This was done, and when the pocketbook was searched for the tenth time, the check was found just where the old man had forgotten he had put it. However vexed the proprietor was, he could not say much, as that very day he had paid the license on a horse that had been dead six months.

SHOP TALK.

In a moment of confidence the All-Around Man remarked that he did not know why he could not get along. Said he: "I don't drink. I work hard; and yet, after being in the Hardware business ten years, I can only earn fifteen dollars a week."

The Bookkeeper thought it rare to find a man who excelled in every branch of the business; his motto was "Be Thorough;" that the man who made the most for himself,

Digitized by Google

produces the most for his house, indirectly in lessening an expense and directly in increasing the sales.

After some discussion it was agreed that the branch of the Hardware business that offered the greatest inducements was the Builders' Hardware department. That if any of the trade papers were examined, the advertisements for help wanted called for five Builders' Hardwaremen to one general clerk.

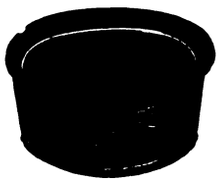
The Builders' Hardwareman being called upon, said that the reason was because there were fewer men who could approach the trade and figure plans correctly, than might at first be supposed.

Answering the question "How can one learn to figure plans correctly?" he said: "First get a set of plans and specifications from an architect and take instructions on technicalities, learn the significance of marks and terms. For," said he, "you may know a great deal about locks and knobs, but if you are ignorant of the skill of reading plans your Hardware knowledge will avail you little."

SHOP MAN.

Products of the Standard Fiber-Ware Co.

The products of the Standard Fiber-Ware Co., Mankato, Minn., are almost too well-known to need a detailed description. We illustrate herewith a half dozen lines manufactured by the company, including Water Pails, Chamber Pails, Cuspidors and Mats, Wash Bowls and Pitchers, Spit-



toons and Wash Basins. The company say that their goods combine strength, durability, convenience, with cleanliness. The Water Pails are described as being particularly adapted to mining and alkaline, and also dry and windy regions, as they do not rust nor fall to pieces; and that they are adapted for continuous holding of water because they do not corrode, become foul, nor soak up pulpy. The Chamber Ware with hand-painted decorations is said to be very handsome, as impervious to liquids and odors as crockery, more easily and safely carried about and emptied, without breaking; and so, more durable and convenient, and, at the same time, cheaper. The Cuspidors with Mats are suitable for public halls, large corridors and lobbies. It is claimed that the Spittoons have all the merits of the pails, and are particularly adapted to use in hotel lobbies, court house, stores, mills, offices, and all places where many such articles are much used, because their shape, smoothness, and detachable covers en-

able them to be easily cleaned, stacked and moved about. It is said that the Wash Basins also, being so easily kept clean, and not rusting or soaking, and so cheap, are just what are wanted in country hotels and in the back kitchen or wash room, by the mechanic, artisan and farmer, and by all workmen in shop, mill and factory. The company say: "We have learned that long tough fiber, like flax, is desirable; that wound and pressed fiber goods are stronger and more elastic than moulded; that, when the shapes of fiber vessels are such that they cannot be drawn or pressed into form like sheet metal, the bottom should be immovably fastened to this vessel so it cannot warp out or loosen; that pails for common use should have all edges protected by metal; that just the right material in

just the right proportions must be united under proper conditions in the water-proofing process, so as to combine chemically with the fiber, with such subsequent treatment as to indurate the ware by oxidation throughout, so that it shall be practically equal to vitrified ware, without its fragility. Standard Fiber-Ware is made as we have just described."

Revised List on Aluminum Ware.

Sidney Shepard & Co., Buffalo, N. Y., have issued a new list on Aluminum Ware, which may be found below. In connection with this they announce that the completion of the Niagara Falls plant, and the consequent low cost at which immense quantities of electricity are produced, have enabled the manufacturers of aluminum to make the metal at much lower cost than heretofore. This enables the manufacturers of aluminum ware to furnish it at much less price than before. The list per dozen is as follows:

Preserving Kettles	No. 2000	2200	2400	2600	2800	3000
	$8.60	10.00	11.80	13.00	16.00	17.00

Picnic Cups	No. 1000, $6.00	Servers	No. 2000, $9.00
Tumblers	No. 500, $3.20	Soup Ladles	No. 3500, $6.00
Str't Pie Plates, 9 in. $3.50, 10 in. $4.70		Handy Dippers	No. 2020, $3.60

The members of the Hartford Hardware Clerks' Association held their annual banquet at Hartford, Conn., some evenings since, when the usual amount of stories and scenes from Hardware life were related by the boys and the evening much enjoyed. Following the supper the annual business meeting was held and officers for the ensuing year were elected as follows: F. C. Bidwell, president; E. J. Haskins, vice-president; C. E. Martin, secretary and E. R. Clark, treasurer. Herbert S. Herrington of Willis Thrall & Sons was admitted as a member of the association, and the treasurer's report showed a prosperous condition of the club financially.

The Simmons Hardware Co., of St. Louis, will make the Iver Johnson cycle one of its leaders for next year, Fred I. Johnson having closed a contract with the company for 2000 Iver Johnson cycles on his recent Western trip. This company will act as Western distributing company for Iver Johnson's Arms & Cycle Works.

Iver Johnson's Arms & Cycle Works, of Fitchburg, Mass., recently sold ten of their '96 machines to the Norwegian government for the use of government employees. The machines were finished in blood red, the country's color.

An Olde Harde-Ware Store.

An old-fashioned envelope in brown, has found its way to this desk, and within it, upon coarse, brown paper suggestive of the primitive days, was found an attractive monograph, the title page of which is here reproduced:

JOHN E. BASSETT, President. GEORGE J. BASSETT, Sec. and Treas.

Established 1784.

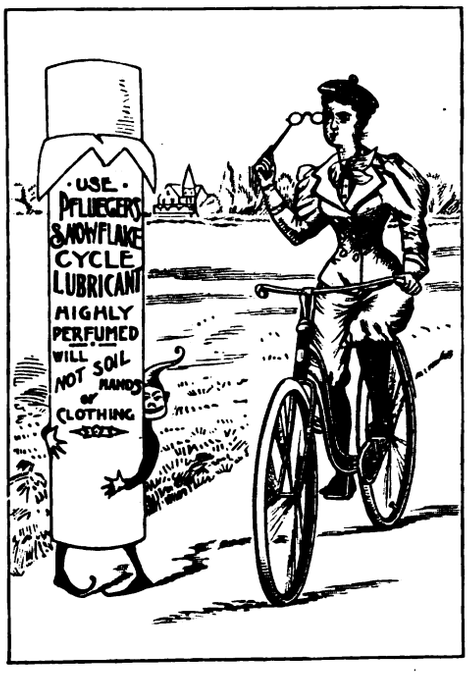
Ye Olde Harde-Ware Store

1784
Titus Street 1792
Street and Hughes 1821
1838 S. Hughes & Son
E. B. M. Hughes 1855
John E. Bassett & Co. 1889
The John E. Bassett & Co.

The John E. Bassett & Co.

754 CHAPEL ST. 318-320 STATE ST.

NEW HAVEN, CONN.



This is followed by a history of this ancient yet up-to-date house, from which we quote: "It is Ancient History, perhaps, to many of the New Haven public that the Olde Harde-Ware Store on Chapel Street was established one hundred and eleven years ago, in 1784, the year in which New Haven, with some three thousand inhabitants, became a city. A business centenarian for several years, it is probably the oldest house of its kind in New England. During all that period of commercial longevity but four men have had the management of this business, which, handed down from senior to junior partner and from father to son, has never really changed hands. And for nearly half that time the present head of the concern, Mr. John E. Bassett, has been connected with it; for with the beginning of the coming year he will have completed his fiftieth year of service in the same store where, as a boy, half a century ago, he began his business career. Mr. Bassett has for several years been accorded the distinction of having been longer on the street than anyone now in business there, and the changes he has witnessed in that time have been fully commensurate with the remarkable growth of our country. From the small 'shop' of fifty years ago, where everything comprised in the Hardware of that day was to be found, the business has grown; so that now the old three-story building on Chapel Street, with its connecting store on State Street, can contain but a small part of the many and diverse articles known as Hardware. As in the case of the professions, business has developed into specialties; and though our store has never lost its general character, yet we have turned our attention more and more to the extending of several special lines—chief among them being cutlery. Though established over a century ago our store has always been abreast of the times; and yet in the selection of our stock, though it is thoroughly up-to-date in style and usefulness, old-time quality has never been sacrificed for sham; while in the serving of our patrons, the courtesy of yesterday is never lost in the hustle of to-day."

The Erie Specialty Co.

The Erie Specialty Co., Erie, Pa., have been established but seven years and have already obtained a prominence in the manufacturing world which encourages the genial proprietors to look for a greater measure of success in years to come. The company have just erected and occupied a neat brick factory, two stories high, and 103 and 40 feet in dimensions, which, in convenience, lightness and solidity, is not inferior to any manufacturing establishment in Erie. It is of the slow-burning, or mill-construction type, and the arrangements for ventilation and heating are admirable. The premises are amply large for almost any degree of expansion and enlargement, and it is the purpose of the proprietors to make the grounds attractive and beautiful, each partner believing that pleasant surroundings are not inimical to the prosecution of business. Some idea of the prosperity of the company may be gathered from the statement that their business for the first nine months of the present year was equal in volume to the entire business of 1894. The factory gives employment to about 75 men. The products of this company that are best known are corkscrews, cigar box openers, cigar cutters, cigar lighters, etc.

A Bicycle Chain Lubricant.

The intellectual and athletic young lady who is here seen speeding upon her machine, has a right to feel that the brownie whom she has met has a laudable ambition to make her way easy, and reduce her labor to a minimum. The means by which he proposes to do it are obvious—the reduction of friction to the lowest possible point. Those who have used Pflueger's Electric Bicycle Chain Lubri-

cant, made especially for application to bicycle chains, declare that it fully carries out all that is claimed for it. The "Snowflake" brand of the same seems to have been made especially for the use of the lady wheelers, as it is described as highly perfumed, and the information added that it will not soil the clothing. The manufacturers describe the Lubricant as of first-class quality and economical, because of its lasting qualities. It is put up in handsome silver foil wrappers, and in six assorted colors on a slanting show case, with wire brace—making a very attractive display for show case, counter or window. It is made in three sizes, with two cards—one dozen—in a box. The manufacturers, the Enterprise Mfg. Co., Akron, Ohio, have placed this article upon the market with great success, and will be pleased to answer inquiries as to prices, etc., and also concerning their great lines of artificial fish bait, luminous bait, etc.

T. F, Campbell, Hardware, stoves, etc., New Brighton Pa.: "Your valuable journal is always a welcome messenger, and I look forward to the 10th and 25th of each month for HARDWARE as I would look for a trusted friend, for it is surely such."

"Hop's" Corner.

Among the many miseries of a "traveler's" life, there are few that bring more discouraging results, when compared with the glowing anticipations under which they find birth, than the letter or telegram your firm forwards to you, instructing you to "call upon Smith & Blank, who are desirous of purchasing a large bill of goods," when in reality all that the aforesaid Smith & Blank have done to create this second story rainbow of hope, is to ask for the "lowest prices" on three or four unimportant items in our voluminous catalogue.

It was an experience such as this which my old friend, Charley Bartol, struggled through a few summers ago. Charley is still oiling the machinery of trade in the house of Ives, Blakeslee & Co. He was in Boston on that memorable occasion filling that dignified community full of a new trick dog, with which the above mentioned inventive company was innoculating the toy dealers. It was new, being propelled by squeezing a small rubber bulb, and forcing the air to create a locomotion to the "pup." His firm telegraphed him to "call on Blankenstein Bros., who were large publishers, as they wanted to purchase a large quantity of the popular trick dogs."

Visions of a record-breaking order filled his brain, in which this new and desirable toy would be purchased with a view of utilizing its novelty as a "premium" in the promulgation of some periodical published by this undeniably progressive house. He early in the morning of the hottest day in the season—84 degrees at 10 A.M.—walked every step of the way across the Common, sweating at every pore, and finally sallied into the large establishment occupied by this house; waded through an ocean of female employees, and having his telegram clutched tightly in his itching palm, he finally reached the office of the buyer, who, upon learning the facts from the telegram, seemed at a loss to account for its inspiration. After asking all over the house of the possible projectors of this method of obtaining information, it was finally discovered that the office boy who wanted to buy *one* of these latest novelties "at the bottom price," had used the firm's notehead, envelope and stamp to obtain the sought-for information, and, of course, as far as Charley was concerned, the firm "regretted exceedingly—the article was so entirely out of their line," etc., etc. I violate no confidence when I state that Charley returned to his hotel as speedily as possible and wrote a letter to his house on the subject, every line of which scorched the paper on which it was written.

I have often thought what a lovely lot of "miseries" the "boys" could put together, if they only set out to accomplish it, for the experience of every traveler is filled with them. How will this do for a starter?

Sitting up until 2 A.M. to copy several important orders for the mail which leaves daily at 6:30 A.M., and which the clerk of the hotel promises will be called for at your room at 5:30, in ample time for the post-office.

Wake up at 8:30 as from a "Rip Van Winkle" sleep, and find your identical letters on the table, where you left them on retiring; and then to aggravate the case, have the clerk swear they "rapped on your door fully five minutes and couldn't rouse you." You plead this couldn't be possible, as you are an extremely light sleeper, when the clerk settles you by asking if you "heard the breakfast gong at 7:30," which you are obliged to confess you did not, and so it serves for the moment to mitigate the severity of your wrath. You do not learn until afterward that this house never rings a gong for breakfast. So, of course, you didn't hear it, but the clerk was "fly" enough.

When I commenced as office boy in 1856 for John C. Tucker & Co., corner Dey and Greenwich Streets, the number of jobbing Hardware houses was very large, and it was the height of many a youngster's ambition to become connected with a business considered so essentially unspeculative and pre-eminently respectable. I remember as though it was yesterday, the modest manner in which Thomas C. Smith, who attended to the business of engaging new talent, stated to me what were the usual terms on which engagements were made, and I was even then a long-legged boy of five feet eleven, and he was a few inches shorter. He seemed to look up at me when he stated "they usually gave $100 for the first year's services, with an advance of $50 for each succeeding year, but in my case," etc. The result of the conference was I agreed to what was virtually a three years' apprenticeship at $125, $175 and $250. As I had early knowledge of my inability to live on my first year's income, I was prepared to accept, even before the terms were stated, and so was launched successfully.

Of the large number of Hardware houses then in existence, very few, if any, made large gross sales. I doubt if the largest at that time reached annual sales of $400,000.

I think John C. Tucker & Co. averaged about $180,000; but the salaries were small, $1100 being the highest among the salesmen and $600 the lowest. The bulk of the sales being made on English and German goods, costs of which it was simply impossible for retailers to obtain, the jobbers frequently made as large a percentage of gross profits as the retailers. In fact, some goods seemed so ridiculously low in original or actual costs, I have frequently, under instructions on our foreign bill-book, "marked up" the cost, 25 per cent., before putting on the customary jobbing profit. This, I remember, was notably the case with wrought padlocks, curry combs, hob nails and a variety of articles which formed the stock in trade of houses catering for certain sections of the country.

The Southern houses, or those whose sales were exclusively to merchants in the Southern States, it was agreed, made the largest gross sales, combining as they did the greater risk with the greatest profit. Credits were conceded on very long time, even to Northern and Western trade; "six months" was the rule; and in many sections of the South especially, accounts were invariably settled by the customary "note at bank" frequently in the merchant's hand before the goods were received and opened; and such extravagant claims for "shortages and overcharges," now so prevalent in these "2 per cent., 10 days'" times, were in those days almost, if not entirely, unknown. A dealer had to have substantial credit to be enabled to buy his supplies from the various houses, on such long time as then obtained, and he was very careful not to make himself unpopular by any such ridiculous methods insisted on at present. When goods were sold they were sold "for keeps" and not countermanded by mail before shipment, simply because a representative from a competing house makes a quotation 5 per cent. lower, so as to create cause for complaint.

The relations existing between the jobber and his customers were always of the pleasantest character, every care being taken on his annual or semi-annual visit to New York, to keep him well in hand during his sojourn in the metropolis. Clerks were deputized to take him around and show him the sights, the firm paying the expense account in a gross sum, without asking for a bill of particulars of the "jollying" usually resulting from the nocturnal trip.

Careful comparisons were made between the houses in the different lines patronized by the far-off buyer as to points showing an improved or impaired credit; the perfect community of interests among the jobbers in the various lines—not to be found in these "cash" times, making it necessary and advisable to watch closely the habits and business-like methods of a dealer whose account frequently meant $2500 to $3000 a year, with only semi-annual settling days, in which all the creditors were interested.

When the Western or Southern buyer got ready to commence his purchases, it was understood by the salesman—

Digitized by Google

very often one of the firm—that it would be an all-day job. The wares sold were always in stock, and not as now represented, too frequently by a sample only. Goods were taken out of stock and the bill laid out on the floor, a large bill often remaining there a week or two before final disposition was made of it, by charging it up from the goods themselves and making a shipment of the same, many times the midnight oil, so to speak, being consumed before its successful accomplishment. The goods were insured against loss in transit immediately upon shipment, and the invoices forwarded promptly, accompanied by the universal notes made out ready for signature and return.

A few very close goods, nails and shot particularly, being always considered net cash goods, were paid for before shipment. Nails then cost $2⅜ to $2⅝ per keg, and were bought on four or six months' time, and sold for one-eighth of a dollar a keg profit, but were paid for at time of purchase, before shipment, making a much finer scale of profit than can be obtained to-day. It was much less trouble to sell them as well, the scales of prices being very limited, all sizes from 4d. up being sold at the base price $2⅜, as stated, $1.50 extra being charged for 3d. common, and $2.50 above base for 3d. fine, clinch nails costing $1 a keg more than common cut. There were no such fine distinctions in price as the close profits of the present day has made necessary in this one item alone, that of selling nails, covering as it does so many selling rates, that it necessarily takes a *man* to tackle a nail customer and make a sale, old-fashioned ways being too plain and direct for what "Abe Quackenbush" used to call the necessity for "buzz-fuzzing."

"Hop."

Big Improvements in Newark.

Since the middle of June large forces of carpenters, masons, machinists and other artisans have been at work in and around the immense department establishment of Hahne & Co., Newark, N. J., and wonderful work has been done in the way of alteration, improvement and enlargement, particularly on the Halsey and New Streets sides. In fact, it has all been in that direction, away from the big Broad Street front, and even until one was well into the store nothing could be seen of what was going on. A church and a large frame dwelling house on Halsey Street have been torn down, and with thousands of loads of earth taken out of the consequent excavations, have been carried away. In their place has been reared a brick and iron structure more than 125 feet square, fronting on Halsey Street, giving the firm 31,000 additional square feet of shopping room, and making the entire floor space nearly 250,000 square feet. Besides it gives a clean sweep through the block from Broad to Halsey Street and more than a hundred feet wide. When the improvements now in contemplation are completed—and to do that will require probably two years of steady work—the stores will have a frontage of about 200 feet on Broad and Halsey Streets, and have that width all through the block, besides the New and West Park Street fronts.

The Berlin Iron Bridge Co., East Berlin, Conn., have just completed for the Somerville Woolen Mills, Somerville, N. J., a spinning room 54 feet wide and 210 feet long, and a boiler room 40 feet wide and 216 feet long. The construction of the spinning room is steel trusses, with heavy plank floors and roof. The boiler room is constructed with brick walls, steel trusses and corrugated steel covering, making it absolutely fire-proof.

Doing Business Direct.

The position just taken by the Pike Mfg. Co., Pike Station, N. H., in regard to syndicate buying, is fully explained in the following letter to their customers, which they have issued under date of November 13th:

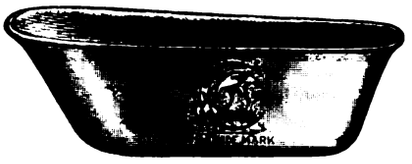
"We have established a salesroom at No. 151 Chambers Street, New York, and we believe that our friends can be better served and our business handled more expeditiously and satisfactorily if we do our business direct with them, and dispense with the services of manufacturers' agents and syndicate buyers. We have been most ably represented in New York for a number of years by an agency with whom our relationships have always been thoroughly satisfactory, and we have always been on the most friendly terms with the syndicate buyers. We feel, however, in making the change we are acting for your best interest as well as our own. We have recently published a new catalogue, which will be forwarded to you if desired. Our stock is very large and complete, and we can make prompt shipments of everything in the sharpening stone line. Our prices are reasonable, and the quality of our goods is well known, and all that bear our trade-mark are fully warranted."

This is accompanied by a letter to the agents and buyers referred to, which gives their reasons for this step, as follows: "We are in receipt of a letter to-day from one of our best and most reliable customers, which reads as follows: 'We were visited to-day by a syndicate buyer, and among other goods he gave us prices on that he could do us some good were yours. He quoted us the same prices your Mr. Smith left us, and then said they had a 5 per cent. commission. If this is the case, is there any reason why we should not have the benefit of that commission? It seems to us that it belongs to us if you give it to any one. We think you will see some justice in our claim.' We have had a good deal of trouble in this direction, and have decided that it is for our best interest to do our business direct as far as possible, and are therefore issuing the enclosed circular letter. You know that we have the very kindest feeling towards you personally, and that our business relationships have been of the most friendly character."

And now the bicycle makers have joined in the controversy, and threaten to boycott the railroads which make a charge for carrying bicycles. As they are heavy shippers of freight, it is thought that their action may have a favorable effect. The case is not entirely one-sided, however. Some bicyclists have expressed their satisfaction with the new rule, as it enables them to have their machines checked and to hold the railroad company responsible for any damage received in transit, while formerly they had to trust them to the tender mercies of the baggage men, and besides, had to pay these man a gratuity which quite offset the free transportation offered by the companies.—*Philadelphia Bulletin.*

Prospect Heights Hardware Store, No. 429 Fifth Avenue, Brooklyn, N. Y., October 10, 1895. HARDWARE Publishing Co.: Enclosed please find subscription to your paper for one year, beginning with the latest issue. We have been in business six months, and feel we can no longer get along without your valuable paper. Yours truly,

BRERETON & TAYLOR.



The Bissell Carpet Sweeper Co., Grand Rapids, Mich., are now and have been for some time in the past, operating their entire eight factory buildings, until nine o'clock every night, which is mainly owing to the large demand for Bissell Carpet Sweepers for Christmas gifts.

HARDWARE costs only One Dollar a year.

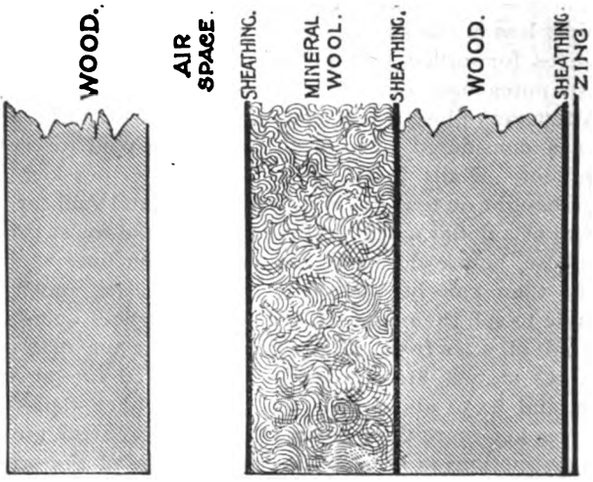
What Is Linenoid?



Crane Bros,, Westfield, Mass., are offering the trade a large assortment of articles manufactured from a new composition called Linenoid. This material is composed of linen stock, such as linen threads, canvas cuttings, etc., which, after being reduced to a pulp in a beating engine, and chemically treated to render it impervious to water, is run on a cylinder machine into sheets of any size or thickness. It is then molded on wooden or iron forms, subjected to great heat and pressure, the result being Linenoid, a material that the manufacturers state cannot be broken, is light, tough, water-proof, very durable, taking a high finish, and similar in appearance to rawhide. The following list shows the great number of articles that are made of Linenoid: Bath tubs, belting, boats, blank book covers, canoes, carriage tops, cone pulleys, cylinders, desk baskets, die blocks, extension cases, fish rod cases, grocers' baskets, gun cases, hotel trays, laundry baskets, laundry tubs, loom pickers, mill baskets, millinery boxes, musical instrument cases, pantry sinks, photographers' trays, pool triangles, printers' trays, trunks, tubing, umbrella stands, valve handles and warehouse baskets. We illustrate herewith a Linenoid Bath Tub, which is said to be extremely light and will not dent or rust. In speaking of their boats and canoes the company say: "We are aware that with the great variety of boats and canoes on the market no one need go without one, but we are sure that if there is a better material than wood for boats and canoes the boating public would like to know about it. We

claim that Linenoid is a better material, and will give a few reasons why a boat built of this material is superior to one built of wood. Owing to our method of molding them on forms, and making them seamless, we have—what makers of wooden boats have been aiming to produce for years—absolute freedom from leakage. As there are no seams to open, they are not affected in the least by heat or cold, will not warp, crack or split, and gain no weight by use."

Grand Rapids Refrigerator Co.

We have at hand a handsome photogravure catalogue and price list of the Grand Rapids Refrigerator Co., Grand Rapids, Mich. The company say: "We call your attention to the improvements we are constantly making in our goods. We offer an entirely new line of charcoal filled refrigerators, with elaborately embossed hardwood cases, and containing all our latest improvements. We also offer a complete line of mineral wool-filled refrigerators, in richly carved hardwood cases. We are also pleased to state that the reputation of the Leonard Cleanable Refrigerator as a first-class article, is now so thoroughly established, that we are receiving many unsolicited orders from all parts of the world. We recently sent one to the Sultan of Turkey, and they frequently go to India and Africa. The trade visiting the Atlanta Exposition are specially invited to examine our exhibit in the Forestry building, in charge of J. H. Roberts." The illustration given here shows the method of insulation employed in the mineral wool-filled refrigerators. In reference to this subject the company say: "Air is the best distributor of heat and also the greatest barrier to its transmission, according as it has or has not freedom to circulate. To prevent the conveying of heat to the inside of our refrigerators, we make the air space as nearly air-tight as possible. The air space also prevents moisture from within from reaching the outside case and swelling it out of shape. Mineral Wool is a vitreous substance having the appearance of wool. It is made from the slag of blast furnaces or other similar material by throwing a jet of steam against a small stream of the liquid glass. In this manner it is so expanded that it contains 92 per cent. of air and only 8 per cent. of the original substance. The air is confined and held in posi-

tion, consequently it cannot carry heat, and makes the best known insulating material. It is also indestructible and will not mould or smell. The sheathing used in our refrigerators is the Bird Patent Water-proof Inodorous Sheathing. It is called charcoal sheathing by some manufacturers, and is sometimes the only material used for insulation and only a single layer at that. By reference to the above diagram you will see that we give eight walls for insulation."

Making Bicycle Chains.

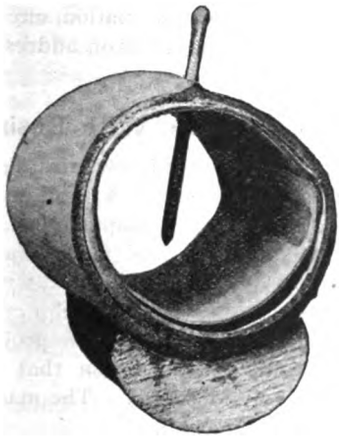
The Indianapolis *Journal* says: "The Indianapolis Chain & Stamping Co. will this week begin moving into its new building, corner of Mississippi and Georgia Streets, and will then become the largest plant of this character in the country. It was the first company to manufacture bicycle chains. For some months the company has been working 300 people, by working a night as well as a day force. When in the new buildings, 500 people can be employed by day, and in case of being pushed can, by running nights, more than double the present capacity. The new buildings are among the most substantial built in this city, are light and cheerful, and finely ventilated, a matter which is receiving more attention in the erection of buildings of late. The main building is 150 feet in length by 50 in width, with two wings each 70 feet long by 50 wide, and an enameling room 45 feet long by 25 wide. Electricity will be the power used, each group of machines having a motor. The building will be warmed by steam and lighted with 400 incandescent lights. The company hopes to be settled in its new quarters by Dec. 1st."

Aluminum Legs and Ears.

"Perhaps you may doubt the veracity of my statement, young man," said a well-known aluminum manufacturer to a representative of HARDWARE recently, "but it is, nevertheless, true that we are making artificial arms and legs of aluminum, and artificial ears have already been constructed of that metal. As an adjunct to the science of dentistry, it needs no recommendation, its long use in this connection being a guarantee of its popularity. Yes. It is being used in a great many other ways also: for horseshoes, army equipments, racing shells, cooking utensils, and is entering largely into the construction of yachts and torpedo boats, and, in fact, is being adopted wherever it is possible."

Digitized by Google

ILLUSTRATED BICYCLE NOVELTIES.

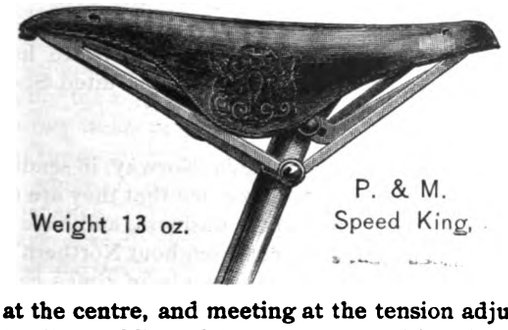


MANUFACTURERS and DEALERS are invited to make FREQUENT USE of these columns.

Anything NEW in BICYCLES or BICYCLE NOVELTIES should be sent us immediately. NO CHARGE, direct or indirect, is made, as our interest lies in SHOWING THE HARDWAREMAN what is going on in THE BICYCLING WORLD.

When your NOVELTY is ready, send us an Electrotype and descriptive matter, which will appear immediately.

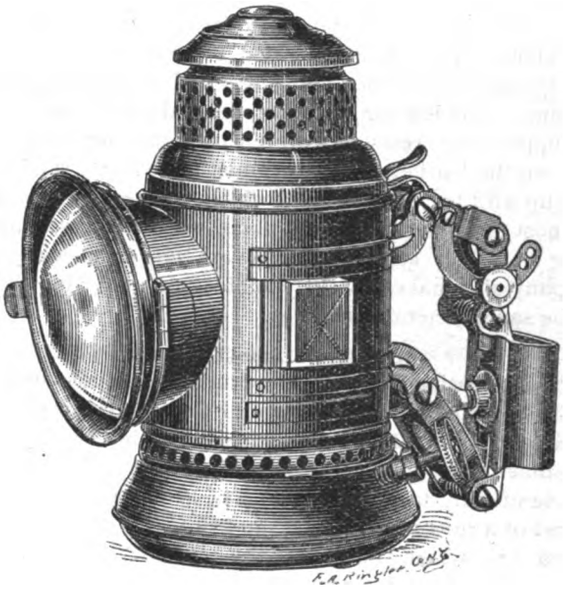
Morgan & Wright Quick Repair Tire.



"Remove the nail and inject our special rubber solution, which, pressed down, picks up the patching ply in the inner tube, closing the puncture. That's all The

quickest, least expensive and only permanent quick-repair device." In the above brief manner, Morgan & Wright, Chicago, describe the operation of the quick-repair tire, which will be their standard in 1896. The quick-repair device does not change their regular make of tire except by the addition of a thin film of rubber inside the inner tube. Morgan & Wright have the reputation of not experimenting at the expense of the public, hence their claim that this quick-repair device combines the two essen tials, speed and permanence, is worthy of belief. They have produced something which others, less fortunate, have long labored for. Morgan & Wright have printed a beautiful brochure in which the operation of this simple device is described in an unusual manner, by photographic illustrations from life.

The Speed King Saddle.

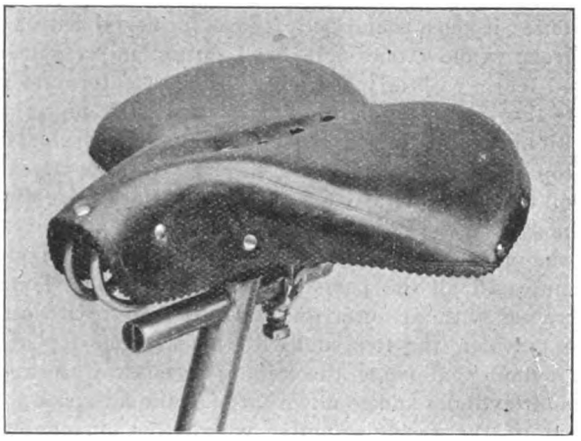


The Persons-Muller Co., Nos. 605 to 613 West Thirty-ninth Street, New York, are marketing the Speed King Saddle, as shown in the accompanying illustration. In the construction of the saddle, four trusses on the cantilever bridge principle are distributed throughout, supporting the cantle in as many different places, being bound by the

clamp at the centre, and meeting at the tension adjustment in front. The saddle weighs 14 ounces and is referred to as light, strong, and intended for road use. It is designed for comfort, and is of a very rakish appearance. The company also manufacture over twenty different styles of saddles, and use only imported English tanned leather, as they note "that American leather, though cheaper, will stretch, owing to the fact that we do not take even a quarter of the necessary time in tanning to produce a perfect leather."

Meteor Bicycle Lamp.

The Hitchcock Lamp Co., Watertown, N. Y., are introducing the Meteor Bicycle Lamp as shown here. It is made of rolled sheet brass throughout and finished in nickel, gilt or bronze; it has a round body and is furnished with a red and green window, one slide for lighting, and a powerful ground lense, with an accurately fitted reflector, and it is said to throw a strong light a long distance. It burns kerosene oil only, and the oil feeder is located on the outside. The top of the lamp is clamped in place by a strong catch. The oil tank is also fastened to the bottom of the cylinder by the same means. Both the top of the lamp, together with the oil tank, can be easily detached from the body of the lamp and all the parts easily cleaned. The lamp is constructed with an outer and inner cylinder, with an air space between the two, and with holes in the top of the outer cylinder, allowing the cold air to enter at the top of the outer cylinder and go down through the air space to the bottom of the inside cylinder, where this current of air then strikes across and meets the flame at the top of the burner. Another current of air enters at the perforations

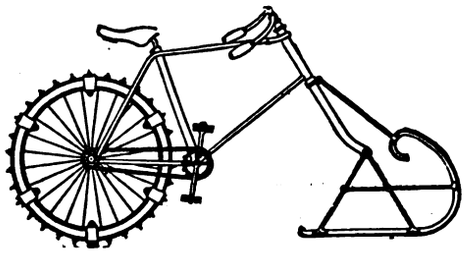


at the top of the oil tank, passes over the oil tank and goes up and around the flame underneath the burner. These two currents of air meet at the bottom of the flame, thus giving the flame an extra amount of oxygen, and this strong draft spreads the flame out, makes it clear and bright, and helps it to withstand a sudden jar or draft. The draft then follows up and out the top of the inner cylinder. It is explained that by this system of double draft, "the faster the lamp moves the stronger will be the draft, the greater will be the amount of oxygen forced up and around the flame, and the brighter the light; also that the extra strong draft serves to keep the lamp exceedingly cool." The wick-raising device is so constructed with a worm and gear that all parts of the wick are evenly turned up, thus making a square-topped flame instead of a pointed flame. The gearing is also constructed to prevent the wick from jarring up or down. The top of the lamp is fitted with a perforated cone that connects with the inside cylinder, and prevents any draft going in at the top of the lamp and down on top of the flame. The makers state that they have tested the lamp by holding the flame directly in front of a blower with an inch opening, and the lamp would not blow out, the blower running at top speed. It is stated that the

Digitized by Google

reflector is easily removed for cleaning, but is so constructed that it cannot be put back in the wrong position. The hanger by which the lamp is attached to the bracket, is adjustable, and so constructed that the rider can tilt the lamp up or down to throw the light on the ground at any desired angle.

The Wheeler Reform Bicycle Saddle.



W. S. Demorest & Co., Chicago, Ill., are introducing the Wheeler Reform Bicycle Saddle manufactured by the Wheeler Saddle Co., Detroit, Mich. It is described as

being unlike the ordinary saddle, but of a shape that supports the rider, being dished in the middle to raise the sides. The leather is depressed at the front where the legs should rest. Being formed in this manner, contact with the nose and sides is avoided and freer play given to the legs. The leather does not depend on its own tension for support, but rests on two felt pads that are interposed between the leather and the frame. The frame is of wood, built up with layers of veneer, which, it is explained, makes it almost as strong as a metal plate, with the advantage of being only half as heavy, although larger in size. The company also make a racing saddle and one for ladies built on the same general principles.

Ice-Bicycle Attachments.

The illustration herewith shows an Ice-Bicycle made by the Chicago Ice-Bicycle Apparatus Co., Lakeside Building, Chicago. The makers claim these are the first practical attachments for converting an ordinary bicycle into an ice-bicycle offered to the public. These patent attachments consist of a runner to replace the front wheel, and a patent spiked tire which encircles the rear wheel as shown. "These attachments are made to fit any style or make of modern safety bicycles. The rear-wheel attachment is made so as to fit tightly around (pneumatic) tire, thereby getting the benefit of the elasticity of the rubber tire and at the same time forming a guard against punctures which are liable to occur if not so protected from the jagged edges of the ice or frozen snow. The machine is propelled by

spikes with flanged heads on the inner side, securely fastened to a strip of canvas around which is placed a metallic band which holds spikes in place. Before adjusting rear-wheel attachment, all air must be taken from the tube, and after attachment has been placed in position tire must be reinflated in order to hold the band secure. In adjusting the runner or skate, remove the front wheel and secure with bolts. The runner is very sharp and hollow ground, so no accidents can occur by slipping in turning or when riding at full speed. They also make a runner for exclusive use on the snow, which is secured to ice runner by a key on the front upper portion of the latter. A strap is fastened from the front of the runner to the fork of the frame, which will hold the runner secure should it accidentally strike a rock or anything likely to cause the bicycle to jar. This attachment weighs about two and one-half pounds, making the bicycle no heavier than when the front wheel is in use. Anybody who can ride a wheel will find no difficulty in using these attachments. Faster time can be made with the ice-bicycle than with the ordinary safety on the road, which has been demonstrated by a fast rider, making a quarter of a mile in twenty seconds. It has been tested by many fast riders on Lake Michigan, and all who have ridden it acknowledge it to be the fastest machine of the kind known." Further information, circulars, etc., will be mailed to the trade or bicyclists on addressing the manufacturers.

Did Not Interfere With Business.

The fire recently reported at Loewentraut's skate factory, Newark, N. J., was not nearly so serious as originally given out. A part of the two upper lofts, occupied by the stamping department, was considerably damaged, but the business has not been interfered with, as the management immediately put in new machinery. The insurance has been adjusted, and work is progressing in the regular manner, with the exception that the output of skates has been largely increased. The made up stock of skates was not damaged at all.

It is very evident that Geo. Hilsendegen, of Detroit, Mich., has great faith in the coming season's bicycle business, as he has up to date purchased nearly 10,000 high and medium grade wheels, and, like Oliver Twist, he is still "crying for more." In addition to having the exclusive agency for Michigan for three of the best known factories, he makes a leader of his "310" Special, a wheel with all the ear marks of the $100 bicycle, and yet being sold by him at a price which makes dealers open their eyes. In conjunction with his large jobbing business, he is the manufacturer of the celebrated Kozy Baby Seat and Bown Cycle Rack. Both of these articles are in great demand, and dealers would do well to correspond with him regarding them.

H. S. Earle, of Syracuse, N. Y., general selling agent for the North Wayne Tool Co., Hallowell, Me., makers of the celebrated, hand-made charcoal tempered axes and the C. C. Brooks patent scythes, says that they have been granted letters patent on the corrugated web scythe, separate from the set, and they "propose to protect themselves against all imitators and infringers regardless of friendship or politics." He also reports that he has established agencies with first-class wholesale Hardware houses in nearly every distributing centre in the United States and Canada.

C. E. Sontum & Co., Christiania, Norway, in sending their subscription to HARDWARE announce that they are carrying on a general import and export business, and have connections in all the principal cities throughout Northern Europe, and visit all important places a couple of times each year, in the interest of some American houses they now represent. Any other manufacturers upon this side who wish to be represented there will do well to correspond with them.

The factory of the New York Tin Foil & Bottle Cap Co , Kingston, N. Y., is reported to have resumed operations. All the former employees who desire it will be taken back.

The Holroyd Stocks and Dies.

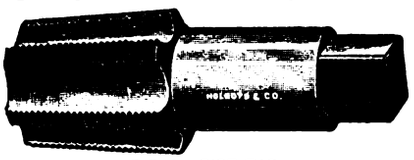
Holroyd & Co., manufacturers of stocks and dies, Waterford, N. Y., are among the oldest and most reliable in their line. They have been doing business "at the old stand"

FIG 1.– MACHIN-ST'S HAND TAP.

for just fifty years, and have increased in reputation as they increased in age. It is probably entirely within the truth to say that "their goods can be found in every blacksmith shop in North and South America." They also have an extensive trade in Europe, and the Australian

FIG. 2.—BLACKSMITHS' STOCKS AND DIES.

colonies. By using first-class material, improved machinery, and workmen who have been born and bred in the business, their goods have naturally reached a high state of perfection, and as has been well said, "are never questioned as to quality, the name Holroyd & Co. branded on



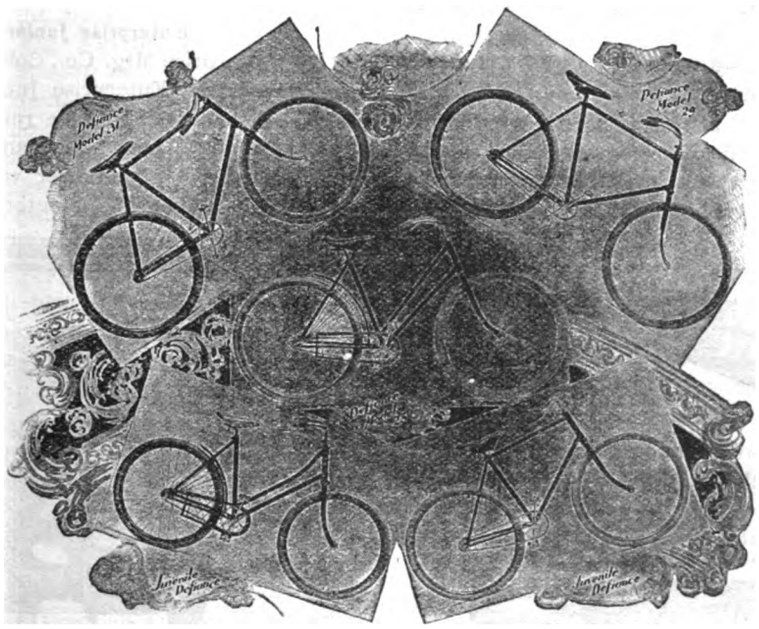


FIG. 3. PIPE TAP.

them being a sufficient guarantee." We are pleased to illustrate several of their specialties in this connection, and dealers who desire detailed information can obtain the same by addressing the makers at their home office.

Defiance Bicycles: Monarch Cycle Mfg. Co.'s Jobbing Line.

The Monarch Cycle Mfg. Co., with a view to making thier products as complete as possible, have put on the market for '96 a jobbing line of low priced wheels, which in point of construction and finish will easily take a leading position. Eight models of the line are shown, comprising 28-inch wheels in 1 and 1⅛-inch tubing, both diamond and drop frames, and also boys' and girls' machines in both 24 and 26-inch sizes. These wheels, even down to the little fellows, are built of seamless tubing only, which is a distinct departure from the ordinary method of construction employed on juvenile bicycles. Large hubs are also used, and a choice is given of either rubber or rat trap pedals. The finish, both as regards nickel and enamel, is thoroughly high grade, and is entirely in keeping with the appearance of the line, which is well named "Defiance." These wheels have already met with a most flattering reception from the trade, and the capacity of the factory is, and will be, heavily taxed to keep up with the demand for them.

The Indiana Wire Fence Co., Crawfordsville, Ind., have commenced the construction of a new building. An electric light plant will be operated therein.

Honeback Razor Strop.

E. C. Brooks, No. 19 Pearl Stret, Boston, is furnishing the trade with the Honeback Razor Strop, of which he says: "Is a new and perfect razor sharpener, the result of a series of experiments by the best expert in this line in the United States. Particular attention has been paid to the quality of this strop and examination of the workmanship and trial of the strop itself will fully demonstrate its claim to superiority. The rubber side is a quick sharpener and should be used sparingly, unless the razor is very dull. This side can be used with water same as a hone, and if it becomes dirty can be cleaned with clear water or soap and water. The use of a hone or any dressing whatever, is unnecessary with this strop."

The Bureau of the American Republics has advices from the Argentine Republic that the acreage of wheat sown for the coming crop is larger than that of last year; the maize and linseed crops are smaller. It is also learned that there was exported from the port of La Plata in the month of July 23,000 sheep, 3000 head of cattle, averaging respectively 143 and 1500 pounds each. Of the twenty-four steamers employed in their transportation, twenty cleared for British ports, two for Belgium, one for France and one for Brazil. A company has been incorporated in London with a capital of $250,000 which will acquire certain railways now under construction in the Republic of Salvador and others already built. It is reported that the arrangement made by this company with the government will practically extinguish the public debt of Salvador.

The Berlin Iron Bridge Co., East Berlin, Conn., have just completed for Jas. McLaren, of Brooklyn, N. Y., a new iron building to cover his stoneyard. The yard is 70 feet in width and 120 feet in length, and the building covers the entire yard, and is arranged to carry a traveling crane of 15 tons capacity, so that stone can be moved to any part of the yard by power, making it one of the most complete stone cutting yards in this vicinity.

One of the latest inventions in connection with the electric light is a silent cab call. Several clubs and hotels in London have already been supplied with this useful commodity. Two lamps are suspended outside the building, one red and the other green, and by pressing a knob in the entrance hall one or other of the lamps can be lit at will. The red light calls a four-wheeler, and the green a hansom.

The Joseph Dixon Crucible Co.'s calendar card for November carries a delightful bit of suburban scenery, with a serenade annex, and a quotation from Hood. It also makes a pertinent suggestion as to the value of the American Graphite pencils.

Robert Ohnmeiss, agricultural implements and general Hardware, Egg Harbor City, N. J., October 14, 1895: HARDWARE Publishing Co.: Enclosed find check $1 subscription for HARDWARE, 1896. Excuse delay; had overlooked, and should not like to be without HARDWARE, especially at this time, when prices are changing almost daily. It is a great help to the retailer in the country.

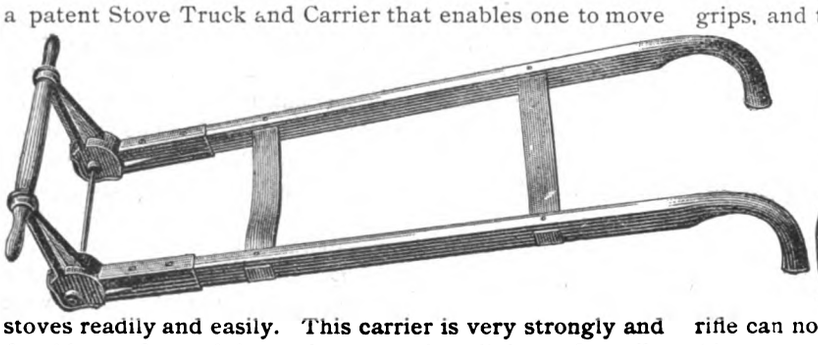
NEW GOODS IN THE MARKET.

If you have anything NEW, let the world know it by illustrating it in these columns.



NO CHARGE WHATEVER is made, direct or indirect, as our interest lies in showing the readers of "HARDWARE" where the LIVE manufacturers and wholesalers are, and what they are doing.

When your NOVELTY or SPECIALTY is ready, send us an Electrotype and descriptive matter, which will appear immediately.

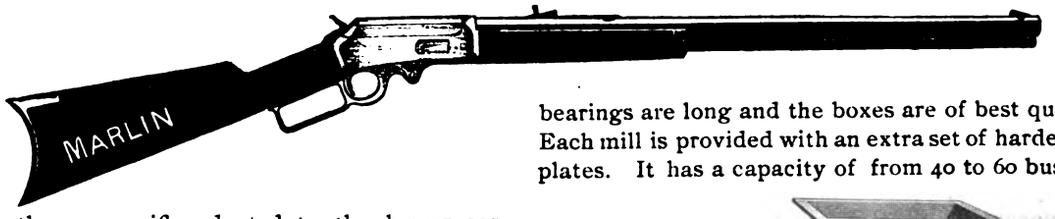
The Hardwaremen everywhere read this department; it is to your interest to make prompt use of it.

Mersick's Stove Truck and Carrier.

C. S. Mersick & Co., New Haven, Conn., offer the trade a patent Stove Truck and Carrier that enables one to move

stoves readily and easily. This carrier is very strongly and durably made, and is at the same time light and easily operated. The construction is such that only a minimum of force need be exerted for wheeling the stove from place to place. One particular advantage which the manufacturers call attention to is that the stove can be placed on the truck and the truck, stove and all can be put into dealers' wagon and delivered without its being removed from the truck.

Steel Snow Shovel.



F. E. Kohler & Co., Canton, Ohio, are offering the trade a Steel Snow Shovel, illustration of which is given here. It is

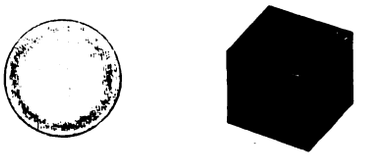
made of 19 gauge sheet steel with a wooden handle, and is said to be light and strong. The edge rests flat upon the ground, thus preventing its catching on obstructions. It may also be used for grain, stable and other uses, and is so formed that one does not stoop in using it.

Marlin Rifle and Smokeless Cartridges.

The model 1895 Marlin Rifle, here shown, for large calibre cartridges will be ready for the market the first of November. The model 1895 rifle is identical with the model 1893,

being merely the same rifle adapted to the larger cartridges. In consequence the manufacturers feel there is no need of explanation as to system, strength and simplicity. The barrel steel is manufactured and guaranteed to the

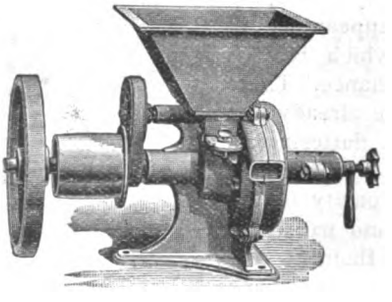
government standard, while the steel used in receiver and breech bolt is manufactured and guaranteed to the same standard for these parts. They speak of this rifle as safe and strong, and have no hesitation in guaranteeing this to shoot safely and accurately the various smokeless powder cartridges made in these calibres. For the present it can only be furnished in the regular rifle with plain lock, but



with all lengths and styles of barrels and magazines. Pistol grips, and the Take Down rifle will be ready shortly. The

rifle can now be furnished in the following calibres: .40-65 (the same as the old .40-60 Marlin), .40-82, .45-70 (taking the various .45 cartridges, including the .45-70-405 and .45-70-500 United States Government) and the .45-90. The standard rifle with 26-inch barrel will weigh but 8¼ pounds, while if a still lighter rifle is desired this can be obtained by purchasing the rifle with half octagon, 24 or 26-inch barrel, half-magazine and rubber shotgun butt, in which case the rifle will be from 7¼ to 8 pounds in weight.

Society Ballots.



H. O. Canfield, Bridgeport, Conn., is introducing the Rubber Society Ballots shown here. They are simply

black cubes and white balls made of rubber, and designed to be used in club and society elections.

Enterprise Junior Feed Grinder.

The Enterprise Mfg. Co., Columbus, Ohio, are putting on the market the Enterprise Junior Feed Grinder as shown here. This mill should be run with an engine of 4 to 8 horse-power capacity, but can be run successfully with tread-power or horse-power with band jack. The band wheel is 5 inches in diameter, with a 5 inch face. The bearings are long and the boxes are of best quality babbitt. Each mill is provided with an extra set of hardened grinding plates. It has a capacity of from 40 to 60 bushels an hour

and grinds equally well cornmeal, chop or any kind of small grain, also cotton seed and slack coal for smokeless furnaces.

Digitized by Google

A New Pocket Filter.

There has lately been placed upon the market by the B. F. Goodrich Co., Akron, Ohio, a new and handy little Pocket Filter that bids fair to a widespread popularity among bicycle riders, huntsmen, campers and sportsmen in general. It is described as a compact and convenient

article to carry, and from a sanitary standpoint needs no recommendation, as its use adds a degree of safety in drinking from springs and streams not even equalled by the tin can at the town pump. The filter consists of a hard-rubber mouthpiece, pliable soft-rubber tube, and a hard-rubber strainer containing a roll of fine meshed bolting-cloth through which the water is drawn.

Wrought Steel Sinks.

The Lalance & Grosjean Mfg. Co., No. 19 Cliff Street, New York, are just putting on the market an L. & G. Seamless Wrought Steel Sink of a novel and improved pattern, adapted for open plumbing. The special feature of this sink, of which illustrations are given herewith, is that three sides of the sink are provided with turned edges,

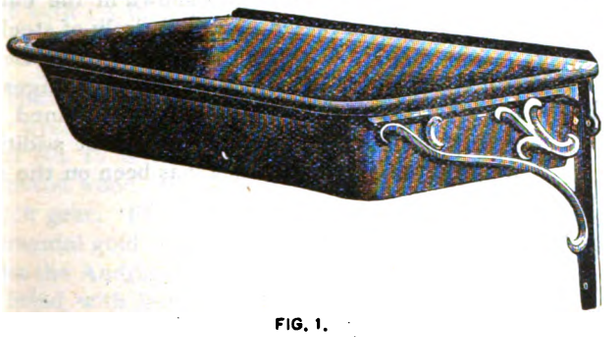


FIG. 1.

specially constructed brackets being used, upon which the sink is slipped, the slot being left open at the back in order to admit the entrance of the bracket. In Fig. 1 is shown the bracket arrangement, Fig. 2 giving a view of the interior. These sinks are pressed out of single sheets of steel, without seams or joints, and are rounded on the sides and corners, so that no dirt can collect in any part of them. Owing to the toughness of the material used—steel—it is claimed that the danger of breakage is reduced to a minimum, and their comparative lightness is a further recommendation, as freight charges are by this means very much reduced. The new sinks are finished either plain, painted or galvanized and also in blue, gray and crystal

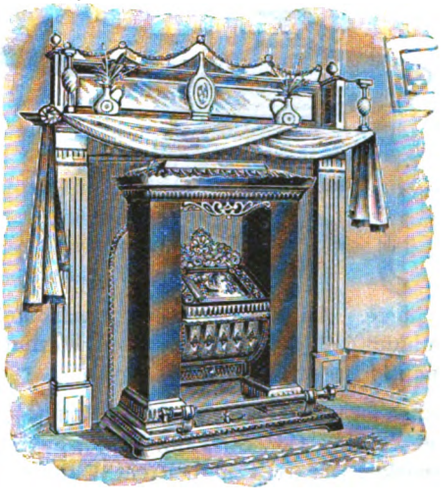

FIG. 2.

enameled ware. They are supplied in six sizes, from 16 inches wide by 24 inches long to 20 inches wide by 36 inches long, all being of the uniform depth of 6 inches. They are provided with the simplest and most approved style of couplings. It may be added that an interesting departure in connection with these sinks is the fact that the company's travelers are provided with miniature models of the article itself, which models they are enabled to show to the wholesale plumbers' supply houses and the leading master plumbers whom they visit.

The Triumph Regenerative Gas Heater.

The accompanying illustration represents the Triumph Regenerative Gas Heater which the Wilder Mfg. Co., Philadelphia, are putting on the market. The heater is of original design, and is claimed to embody principles which insure a healthful and effective heat, without odor of any kind and at the maximum of economy. The columns or upright portions seen at the sides of the heater are made of Russia sheet iron and are hollow. These columns rest on a nickeled cast iron base and are surmounted by a cast iron ornamented top, also nickeled. A heating chamber or fire bracket, similar in form to an open grate, is situated between the columns. The top of the heating chamber is adorned with a handsome art tile and is removable, so that a kettle of water may be boiled and irons or other articles heated when required. The front of the chamber carries mica panels and serves to illuminate the room in which the heater is placed. The burners are of the Bray pattern and are arranged in a row at the base of the chamber, throwing flames forward at an angle. Back of the flames is a curved reflector plate of cast iron with cells upon its back. Air for combustion passes into these cells and comes into contact with the heated surfaces of both the reflector and the cells

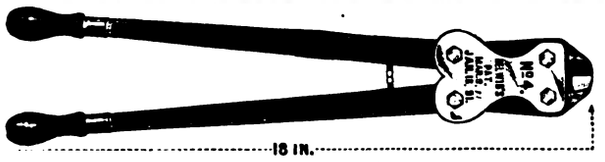
on its way to the burners. The amount of air necessary for proper combustion is regulated by openings formed in the back plate of the fire chamber. The course of the products of combustion is upward along the curved reflector to an opening between the upper part of the reflector and the front of the heating chamber, thence backward over the top of the reflector, and laterally into two separate flues in the iron columns. These flues extend upward sufficiently to give the draft required to bring in a current of cold air. The products of combustion pass out of the flue into the ascending current of cold air, thus increasing the movement by an injector action. The volume of air is checked in its upward motion by a perforated plate within the heater top and distributed equally over the area of the top, the check serving to complete the process of mingling the warm and cold air. As a result it is claimed that an active and constant circulation is set up, which equalizes the temperature of the air in a room where the heater is operated. This circulation, it is said, is evident from the fact that the air is taken close from the floor and discharged in an ascending current from the top of the heater. Another valuable feature of the heater is that its radiant heat from the front of the reflector back of the flames is reflected to the floor in front of the heater, giving a comfortable and pleasant heat, such as heretofore has only been obtainable from an open fire. Upon the base of the heater is a governor arranged so that the movement of a lever along an

Digitized by Google

index plate regulates the flow of gas to the burners. This governor is volumetric, so that the flow of gas to the burners is not affected by changes of pressure in the gas supply. The governor is a recent modification of the well known volumetric governor patented by Mr. Wilder, president of the company, and used throughout the country in various forms.

Aluminum Chafing Dish.

The Illinois Pure Aluminum Co., Lemont, Ill., are constantly adding novelties to their large assortment of alum-



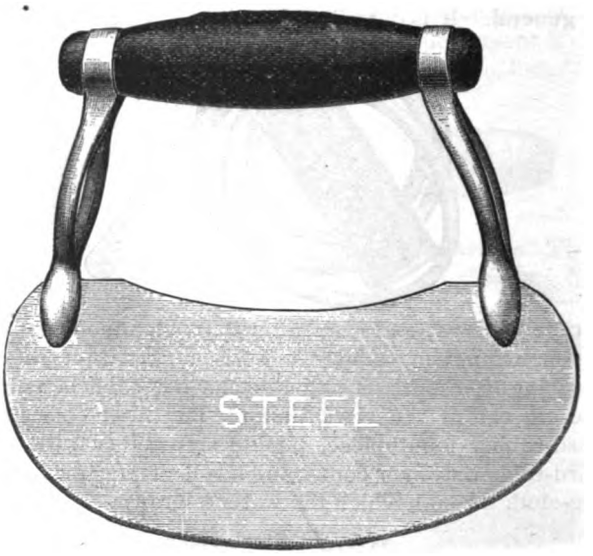
inum goods. Among their latest are the Chafing Dishes herewith illustrated. They are constructed with cast aluminum stands of artistic designs which is quite a departure from the usual built-up stand. The water bowl is a

separate piece. All the parts are handsomely finished, pure aluminum being exclusively used, so that the surface is permanently bright.

The Helwig Bolt and Rivet Clipper.

The Helwig Mfg. Co., St. Paul, Minn., have recently put on the market the Bolt and Rivet Clipper represented here. The tool is described as being made of the best

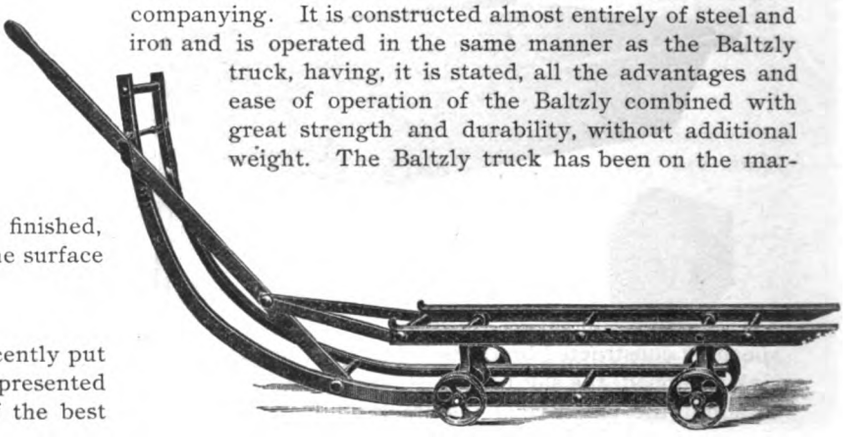
material throughout, with all parts interchangeable. It is recommended by the makers for its lightness, durability and power, and is said to be constructed in a thoroughly scientific manner. It is made in three sizes, to cut 5-16, 7-16 and 9-16 bolts.



New Designs in Silver-Plated Ware.

The Wm. Rogers Mfg. Co., Hartford, Conn., have brought out several new designs in silver-plated ware. We illustrate a sample herewith. These have been manufactured more especially with reference to the needs of the Hardware trade, and can, we are informed, be furnished in complete lines of spoons, knives, forks and fancy pieces.

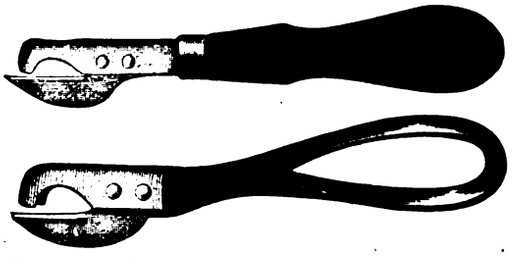
"Dandy" Mincing Knife.



A. S. Henn & Co., New Haven, Conn., have placed on the market the "Dandy" Mincing Knife as shown here. It has tinned malleable iron supports, and is made to

hold the handle in such a way that it will not crack or come off. The blade is made of steel and the handle of enameled wood.

The Warner Steel Stove Truck.



The Warner Hardware Co., Freeport, Ill., are placing on the market a metal Stove Truck as shown in the cut accompanying. It is constructed almost entirely of steel and iron and is operated in the same manner as the Baltzly truck, having, it is stated, all the advantages and ease of operation of the Baltzly combined with great strength and durability, without additional weight. The Baltzly truck has been on the mar-

ket for years, but was made largely of wood. The steel truck was designed as an improvement over the old form in the matter of strength and durability.

Sure Grip Can Opener.

A. S. Henn & Co., New Haven, Conn., are offering the trade a Can Opener in two styles as shown in the illustra-

tions. One style has a nickel-plated steel blade and is made with an iron handle; the other opener has an enameled wood handle, with nickel-plated malleable iron frame.

Digitized by Google

Bicycle Announcements for 1896.

By the courtesy of O. J. Faxon & Co., Nos. 3, 5 and 7 Appleton Street, Boston, we are permitted to make an announcement concerning their output for 1896. They state that they will manufacture for the coming season six separate models of strictly high grade wheels, which, as they say, "are up to date and a little beyond; unequaled in construction, unapproached for beauty and finish, unsurpassed for durability and service." The Puritan will be designed in two models for ladies and gentlemen, and will be listed at $100, the weight running from 18 to 22 pounds. They will also manufacture another model known as the Hector, for both ladies and gentlemen, which is also strictly high grade, listing at $75, weight 21 to 23 pounds. Also two styles of tandems, Diamond and Combination or Drop Frame, weight 33 to 38 pounds. They state that their beautiful illustrated descriptive catalogue for 1896 will be mailed free of charge to all applicants. They add that their factory is fully equipped with first-class automatic machinery and a competent force of workmen, governed by a superintendent who is also a thoroughly practical bicycle expert and mechanic.

Julius Andrae & Sons Co., Milwaukee, inform us that, among others in their line they will make, the Andrae Light Roadster No. 14, which is fitted with 1½ inch M. & W. quick repair tires, laminated wood rims, light road saddle, Record rat-trap pedals, 66½ inch gear, ½ inch chain, 24 inch frame, curved and bent handle bars, cork handles with black tips. Frame enameled in dark olive green with ornamental gold stripes. The Lady Andrae No. 15 is fitted with 1½ inch M. & W. quick repair tires, laminated wood rims, ladies' saddle, Record rubber pedals, 60 inch gear, ½ inch chain, light wood guards over rear wheel and chain, up-turn handle bars. Frame enameled in dark olive green with ornamental gold stripes. The Andrae Racer No. 16 is fitted with 1½ inch M. & W. racing tires, laminated wood rims, ½ inch racing chain, racing saddle, 76 inch gear. Frame enameled in dark olive green with ornamental gold stripes.

Also the Andrae Tandem Model No. 18. Their Tandems are fitted with large tubing throughout. Main tubes 1¼ inch. Double ⅞ inch stays between crank brackets; all points correctly re-enforced. Eccentric front chain adjustment. Positive double steering is gotten by the new Andrae patent device. Brief—Model No. 17. M. & W. quick repair 1¼ inch tires, laminated wood rims, ladies' and gentlemen's saddles and pedals, 70 inch gear, front chain ½ inch, rear chain 5-16 inch, front handle bars up-turn, rear handle bars regular drop pattern. Brief—Model No. 18. M. & W. quick repair 1¼ inch tires, laminated wood rims, 70 inch gear, front chain ½ inch, rear chain 5-16 inch, light road saddles, handle bars regular drop pattern.

They further add that ball bearings are used in every part of the Andrae Cycles. They are of the finest tool steel procurable. The crank hanger bracket is of a large barrel pattern, and is fitted with ⅜ inch balls, the rear wheel has 5-16 inch balls, the front wheel has ¼ inch balls. The cones are of an improved pattern, insuring dust-proofing of the bearings.

The Warman-Schub Cycle House, No. 116 North Lincoln Street, Chicago, are announcing the W. S. C. H. Magnets for 1896. Among these are their No. 11, 25 inches deep, 28 inch wheels, with wood rims, tangent spokes, etc. The weight is 20 pounds, gear 72, the price $125. Their No. 12 is their Ladies' Double Front Tube Frame, the top tube forming a direct brace from the head to the seat-post tube, so that any jar on the front wheel is distributed all over the frame, leaving no weak point. Wheels 28 inch, gear 59, weight 22 pounds, price $125. Their No. 14 is the same style and outline as No. 11, but the frame and wheels are made heavier. The gear is 64, weight 25 pounds, price $125. Their No. 15, weight 26 pounds, $125; No. 16, weight 25 pounds, price $100; No. 17, weight 27 pounds, price $100; No. 22, weight 27 pounds, price $85; No. 23, weight 24 pounds, $65; No. 24, weight 23 pounds, price $50, are some of their other announcements for the coming year. The advance catalogue which has just been received, gives full details not only of these, but of a great many others and also of their Cataract Parcel Carrier Tricycle. Full discounts, prices, etc., will be furnished on application.

Have Tried the Automatic Seat.

The Automatic Cycle Seat Co., Grand Rapids, Mich., should certainly feel satisfied with the many testimonials they have received, a few of which we are permitted to quote herewith: T. A. Krangness, Sioux City, Iowa: "Having ridden your Automatic Saddle a few days I find it satisfactory. For those that sit up straight, as all should do, and for ladies, I cannot recommend a better saddle, as it relieves sensitive parts, which should be free from pressure." C. C. Ripley, Auditor and Cashier, Kansas City R. R. Co., Kansas City, Mo.: "I am very much pleased with my Cycle Seat. I find it more comfortable than any of the large number I have ridden, and free from pressure. It attracts much attention." I. C. Tabor, Independence, Iowa: "I like the way your saddle rides better than any other used, and I have tried several, having been a wheelman several years." W. B. Wirgman, New York, N. Y.: "Some weeks ago, on receipt of my saddle, I wrote you that I would tell you later what I thought of it. My first ride was fifty miles, and since then I have ridden it some four hundred more over all kinds of roads. I take great pleasure, now that I have tested the saddle, in saying that you have undoubtedly got the saddle of the future, as it is most comfortable, easy to mount and brings absolutely no pressure on any part of the person where it could do any injury. My only objection to it is that every one wants to try it, but as that is rather hard on my machine I now make them put it on their own."

National Convention Postponed.

The following circular letter to the trade explains itself:

To the Manufacturers of the United States: The following proposition has been adopted by the Executive Committee of the National Association of Manufacturers:

Whereas, Experience in organizing a constituency for the Convention of this Association, at Chicago, has developed a work of greater magnitude than was originally anticipated.

Whereas, The period in which this work of organization was undertaken, has been largely taken up in political matters; it is therefore

Resolved, That the time for holding the Annual Convention be postponed and fixed for Tuesday, January 21, 1896, at Chicago. Respectfully submitted,

Approved: E. P. WILSON, Secretary.

THOS. DOLAN, President.

Cincinnati, Ohio, November 7, 1895.

Recommended His Competitor.

The following suggestive bit of news is told as it was related to a HARDWARE reporter: A few days ago a prominent saddle maker, in mentioning the good points of his saddles to a large cycle manufacturer, from whom he was endeavoring to obtain a good order, called particular attention to the special efforts his house had been making to produce a saddle leather that would resist stretching as much as possible. Having gone over the ground very thoroughly, as a "clincher" he stated that the results obtained were nearly equal to the lasting qualities of the Hunt Special Top. It is a very frequent occurrence that rival manufacturers will deride and criticise each other's goods, but when one maker will actually recommend the production of a competitor in his own line there must be real merit to call forth the compliment.

Recent Trade Publications.

Julius Andrae & Sons Co., Milwaukee, Wis., are sending their friends a fine line of bicycle literature, explaining the points of their manufacture for the coming season. As an explanatory preliminary, they say: "For some time past we have been using the name 'Sunbeam' on a portion of our bicycles. We find that another firm in the West used this name, without our knowledge, previous to the time we adopted it, and to avoid any misunderstanding in the conflicting of names, we have decided to drop this name and adopt the name 'Calumet' in its place. All bicycles that we have marketed as 'Sunbeams' heretofore will hereafter be known as 'Calumets.'" They have also favored us with advance sheets of their 1896 catalogue, which gives a brief description of their line for the coming year, together with a brief mechanical description of the machines. At the present they have under way a catalogue, which will be ready in December. This will be a distinct work of art, as they intend to made it an interesting addition to their previous efforts in that direction. They further say: "With our present equipment no concern is better placed to obtain the very best results in manufacturing high class goods, than ourselves. In ball-bearings we shall offer some distinctive new models, which, for practical use and accuracy, cannot be excelled. All of our ball-bearings are made in such a manner that they will be dust-proof and oil retaining. Axles can be removed from bearings without disturbing the balls. Front fork can be taken out of head in the same manner. We wish to make special mention of the accuracy with which all bearing parts are constructed, for we have bought the best machinery that the market affords, and in addition to this have built machinery ourselves with which we can obtain results that cannot be gotten from machinery that is bought in the open market. All bearing parts are made mathematically true, and will not vary a two-thousandth part of an inch." Among the machines they announce are the Andrae Light Roadster No. 14, $100; the Lady Andrae No. 15, $100; the Andrae Racer No. 16, $100; the Andrae Tandem No. 17, combination frame, $150; the Andrae Tandem No. 18, diamond frame, $150. They will be pleased to send full information upon application.

The Broderick Supply Co., No. 44 Rose Street, New York, have issued a catalogue and net price list of wheelwrights', blacksmiths' and horseshoers' supplies. It is very complete in these lines. They say: "We offer this complete list of our stock as a handy book of reference, valuable alike as a market report, and as a guide to the cost of material sold by us, entering into the construction of any work. The cuts were prepared especially for us and they will be found very useful in the selection of goods. All goods are warranted to be as represented in all cases, and as we manufacture a large part of the goods shown, we are in a position to give best quality for low prices. All goods sold under the brand 'Manhattan' are fully warranted to be of the highest grade."

"Cycling and Athletics" is the title of an artistic leaflet that has just come to hand. A subhead explains that it is "a description of Spalding's new store," which means that of the Spalding-Bidwell Co., Nos. 29, 31, 33 West Forty-second Street, New York, devoted to bicycles, athletic goods, cycle school and ladies' cycle and athletic clothing outfitting department.

The Marlin Fire Arms Co., New Haven, have issued a very handsome and attractive catalogue, showing their Marlin Safety Repeating rifles, repeating carbines, repeating muskets, double-action revolvers, everlasting shells, reloading tools, sights, etc. It contains over fifty pages, each one of which shows illustrations of their goods, with descriptions.

A Good Bicycle Saddle, Adapted for Long Runs.

The Mesinger Bicycle Saddle is one that shows great care and study in its design and construction. It is manufactured by Hulbert Bros. & Co., New York, and is the result of practical experience, as well as theoretical considerations. The makers inform us that "only one thousand saddles were manufactured during the first year to make sure that it virtually should be the best of its kind, but out of that thousand very few showed any opportunities for

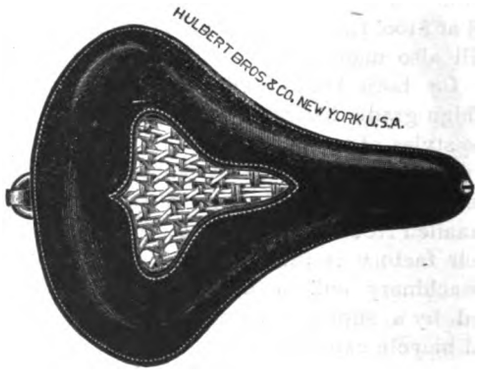

FIG. 1. TOP VIEW.

improvement in style, construction or finish." Recognizing the lasting qualities of cane or rattan from its extensive use for chair seats, the base of the saddle is made from this material, well and substantially woven, avoiding any angles in making the turn of the strip. This rattan base is covered with felt a quarter of an inch thick, to which is sewed a cover of leather one-sixteenth of an inch thick. This combination of felt and leather makes the saddle soft in front, so necessary to health. The long V-shaped hole being cut through both the felt and leather, gives perfect ventilation and does away with all injurious effects. The rear cantle is made of the best second-growth hickory, giving lightness combined with strength. "The rattan will not allow sagging, and is more durable than any other material

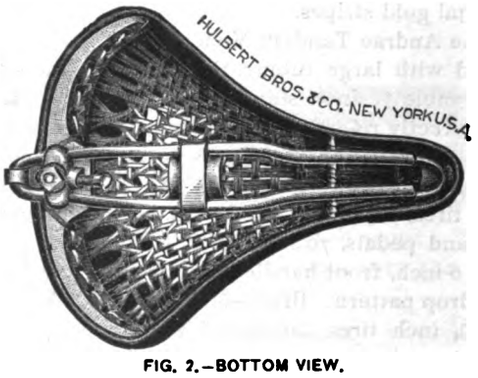

FIG. 2.—BOTTOM VIEW.

known for the purpose. The general appearance is one of comfort and neatness. The covering of leather and felt being laced to the cantle, with a braid to match the leather top, is very natty and handsome. The lightest weight saddle weighs but ten ounces and is particularly adapted for long tours and century runs, as the seat is just as large and comfortable as a heavier saddle, the difference in weight being entirely due to the fact that a wooden spring is used in place of a metal one, as on the regular roadster saddle of this style."

The saddles retail for $4 and are made in russet and black finish.

A. F. Shapleigh, Jr., of the Shapleigh Hardware Co., St. Louis, has just been elected president of the St. Louis Cycle Board of Trade.

The McRae & Roberts Co., manufacturers of steam brass goods, Detroit, Mich., will build a new factory, which is to cost $30,000.

THE NATIONAL HARDWARE ASSOCIATION.

Pittsburg was the scene of the second annual meeting of the National Hardware Association of the United States, and many of the delegates and committees gathered there as early as Monday the 18th, at headquarters at the Monongahela House. The committee busied themselves in making all preliminary arrangements. On Monday evening the visitors, under the guidance of George T. Oliver, F. L. Clark and other representative Pittsburg manufacturers, visited the Phipps Conservatory and Carnegie Library. Tuesday evening was spent by the members at the hotel in making acquaintances and in relating anecdotes and reciting reminiscences.

The opening session of the convention took place in the banquet hall of the Monongahela House on Wednesday morning. President Supplee called the meeting to order, and a motion was then made that the manufacturers in the city be invited to attend the session. Objection was made to this by one of the members who stated that he feared it would be establishing a bad precedent for the future.

Mr. Bindley, of Pittsburg, argued that that inasmuch as the morning session was an open one to which newspaper men were admitted, he thought it perfectly proper to invite the manufacturers. The motion was sustained, and the chair appointed Messrs. McIntosh, Bindley and Bigelow a committee to invite the manufacturers. They retired, and soon returned with several prominent manufacturers.

Business was suspended until the committee returned. After singing the National Hymn the roll of delegates was called by Secretary-treasurer T. James Fernley. The following list gives the names of the jobbing houses represented and the names of the gentlemen representing them:

Lockwood-Taylor Hardware Co., Cleveland, Ohio.
C. B. Lockwood, J. Q. Riddle, J. C. Henry, Arthur Riddle.

McIntosh-Huntington Co., Cleveland, Ohio.
Wm. H. Coles, H. H. Bishop, George T. McIntosh.

W. Bingham Co., Cleveland, Ohio.
H. S. Blossom, George W. Avery.

George Worthington Co., Cleveland, Ohio.
George Deming, W. D. Taylor, C. A. Jewett.

W. B. Belknap & Co., Louisville, Ky.
Morris B. Belknap.

H. W. Luetkemeyer & Sons, Cleveland, Ohio.
E. H. Luetkemeyer.

Stauffer, Eshleman & Co., New Orleans, La.
Walter R. Stauffer, Chauncey W. Stone.

Supplee Hardware Co., Philadelphia, Pa.
William W. Supplee, W. D. Supplee.

Bigelow & Dowse Co., Boston, Mass.
Samuel A. Bigelow.

King Hardware Co., Atlanta, Ga.
W. E. Newill.

Howell Gano & Co., Cincinnati, Ohio.
Jacob W. Gano.

Morley Bros., Saginaw, Mich.
E. W. Morley, A. H. Morley, T. A. Harvey.

Johnson Bros. Hardware Co., Cincinnati, Ohio.
W. C. Johnson.

Kruse & Bahlmann Hardware Co., Cincinnati, Ohio.
Herman Bahlmann.

Weed & Co., Buffalo, N. Y.
Hobart Weed, E. C. Neal.

Shields & Bro., Philadelphia, Pa.
John R. Griffith.

Ott Bros. & Co., Wheeling, W. Va.
M. L. Ott, W. P. Heiskell.

Bindley Hardware Co., Pittsburg, Pa.
John Bindley, Edwin Bindley, W. C. Reitz, W. H. Cochrane.

C. M. McClung & Co., Knoxville, Tenn.

Logan, Gregg & Co., Pittsburg, Pa.
George B. Logan, Thomas A. Parke, Robert M. Repp.

Bostwick-Braun Co., Toledo, Ohio.
George A. Braun.

Stollberg & Clapp Co., Toledo, Ohio.
John Stollberg.

George Brown, Knoxville, Tenn.
John S. Brown.

Weaver, Palmer & Richmond, Rochester, N. Y.
Griff D. Palmer, Lee Richmond.

Wright, Dana & Co., Utica, N. Y.
George S. Dana.

Irving D. Booth, Elmira, N. Y.
Irving D. Booth.

Houghton, Clark & Co., Portland, Me.

Richards & Conover Hardware Co., Kansas City, Mo.
John Conover.

Gille Hardware & Iron Co., Kansas City, Mo.
Jamas Van Peyma.

Drake Hardware Co., Burlington, Iowa.
Charles E. Otto.

Holley, Mason, Marks & Co., Spokane, Wash.
F. H. Mason.

Brown & Wales, Boston, Mass.
William Q. Wales.

J. H. Fall & Co., Nashville, Tenn.
J. H. Fall.

Fletcher Hardware Co., Detroit, Mich.
Charles T. Fletcher.

Fones Bros. Hardware Co., Little Rock, Ark.
Daniel G. Fones,

Lee-Clarke-Andreesen Hardware Co., Omaha, Neb.
W. M. Glass.

Frye, Phipps & Co., Boston, Mass.
Albert W. Wiley.

Van Camp Hardware & Iron Co., Indianapolis, Ind.
Cortland Van Camp.

Russell & Erwin Mfg. Co., New York City, N. Y.
William G. Smythe.

Dunham, Carrigan & Hayden Co., San Francisco, Cal.
Brace Hayden.

James C. Lindsay Hardware Co., Pittsburg, Pa.
Thomas McMurray, John S. Lindsay, A. J. Bihler.

Marshall-Wells Hardware Co., Duluth, Minn.
A. M. Marshall.

Albany Hardware & Iron Co., Albany, N. Y.
Charles H. Turner, W. B. Wackerhagen.

C. W. Hackett Hardware Co., St. Paul, Minn.
C. W. Hackett.

Emery-Waterhouse Co., Portland, Me.
W. Chamberlain.

Seltzer-Klahr Hardware Co., Philadelphia, Pa.
S. S. Scott.

Janney, Semple & Co., Minneapolis, Minn.
Horace M. Hill.

Rice, Born & Co., Limited, New Orleans, La.
Phil R. Rice.

Knapp & Spalding Co., Sioux City, Iowa.
Clarence A. Knapp.

W. W. Woodruff & Co., Knoxville, Tenn.
W. W. Woodruff.

Tabb & Jenkins Hardware Co., Baltimore, Md.
Charles T. Jenkins.

Moore & Handley Hardware Co., Birmingham, Ala.
James D. Moore.

Hildebrand Hardware Co., Indianapolis, Ind.
Philip M. Hildebrand.

Smith Bros. Hardware Co., Columbus, Ohio.
J. H. Smith.

Barker, Rose & Gray, Elmira, N. Y.
Frederick Barker.

Wyeth Hardware & Mfg. Co., St. Joseph, Mo.
Henry E. Hutchins.

Hamilton & Matthews, Rochester, N. Y.
James M. Boucher.

Burhans & Black Co., Syracuse, N. Y.
J. W. Black.

J. M. Warren & Co., Troy, N. Y.
Joseph J. Tillinghast, Frederick A. Leeds.

Standart Bros., Detroit, Mich.
Joseph G. Standart.

Freeman, Delamater & Co., Detroit, Mich.
D. C. Delamater.

Biddle Hardware Co., Philadelphia, Pa.
Charles M. Biddle, James H. Ritter.

In the neighborhood of a hundred firms were represented, coming from the East, the West and the South. A synopsis of the meeting held in Cleveland was then read by the secretary. President Supplee next called Samuel A. Bigelow, of Boston, to the chair, and then delivered his annual address. He said the Hardware trade previous to the organizing of the association had been greatly demoralized, and that the object of the association was to build up trade, to enable the Hardware merchants connected with the association to assist and co-operate with each other; to devise means for the betterment of their mutual interests, and to establish the very best relations with the manufacturers. He said the advancement of the association and the interest taken by the Hardware merchants throughout the country is very encouraging. The total enrollment in December of last year was only 28, while the roll book now bears the names of 112 prominent firms from all parts of the country, as far east as Boston and west as far as San Francisco.

On motion of Mr. Bindley the president's report was adopted. The report of the secretary and treasurer, T. James Fernley, was then called for by the president. He picked up a bundle of documents so large that he could scarcely hold them in one hand. He was about to read them when he was interrupted by a ripple of laughter, and Mr. Bindley moved an adjournment. The secretary, with stolid face, however, proceeded to read. His report, though somewhat voluminous, was very humorous, and there were several laughable incidents during the reading. The secretary stated that the reason he had such an enormous stock of papers was that he had received many letters from members, one member alone having written him 119 letters containing 37,000 words, during the past nine months. During his term of office he said he had received 24,000 letters, with a total of 4,453,450 words. From the president alone he received six letters, with a total of 917,000 words, and had sent out to members of the association over 9000 stamped envelopes.

The "secretary-hyphen-treasurer," as he styled himself, was interrupted on one occasion by a delegate from Philadelphia, who begged leave to remind him that Webster says there are only 24,000 words in the English language. The "secretary-hyphen-treasurer" afterward used a few Latin terms, with the remark to the member that the terms he was using were not English. He next read the treasurer's report, which showed that the association was on a good financial footing, having plenty of assets and no liabilities.

The committee on grievances had no report to make. The meeting was then adjourned uutil two o'clock, the convention then going into executive session, when the executive committee's report and other matters were taken up.

The outdoor programme for the convention was well gotten up, and included an informal reception at the Monongahela House, on Wednesday, November 20th, at 8 o'clock P. M.; a banquet at the same house and at the same hour on Thursday, November 21st, and on Friday, the 22d, an excursion on the steamer Elizabeth up the Monongahela River, leaving the landing near the Monongahela House at 12.45 P. M., visiting the works of the Oliver Wire Co., Pennsylvania Tube Works, the Homestead Works of the Carnegie Steel Co. and the works of the Consolidated Steel & Wire Co. Luncheon was served on board.

Nothing but the warmest praise could be given to the manufacturers of Pittsburg for the generous entertainment tendered by them to the visiting Hardwaremen in the shape of the banquet on Thursday evening and the excursion up the Monongahela River on Friday. The various entertainments were given wholly by the Pittsburg manufacturers without outside assistance. The following gives the names of the committee of arrangements and the reception committee:

COMMITTEE OF ARRANGEMENTS.

John W. Hubbard, Chairman.

Geo. T. Oliver,	W. S. McKinney,
Alan W. Wood,	F. L. Clark,
Francis J. Torrance,	Stephen W. Tener, Secy.

RECEPTION COMMITTEE.

Gen. Chas. L. Fitzhugh, Chairman.

Geo. G. McMurtry,	Richard G. Wood
Wallace H. Rowe,	H. S. Paul,
Chas. L. Gilpin,	Wm. H. Hays,
C. C. Briggs,	C. L. Umbstaetter,
W. B. Rhodes,	C. A. Painter,
Glendy S. Graham,	Philip Mathes,
Geo. V. Willson,	Edward P. Logan,
W. C. Cronemeyer,	T. Howe Childs,
Jos. R. Dilworth,	F. B. Smith,
S. Severance, Jr.,	J. H. McCutcheon,
Robt. Garland,	Thos. Neely,
Thos. W. Smith,	Jos. L. Cooper.

The souvenir programme of the outdoor entertainment contained a description of the works visited, and under the caption of "Everything From a Needle to an Anchor," gave an account of the industries of Pittsburg.

INFORMAL RECEPTION.

The scene in the lobby of the Monongahela House Wednesday evening, on the occasion of the informal reception, was an animated one. At the request of Mr. Fernley the gentlemen adjourned to the banquet hall, where the manufacturers of Pittsburg were made acquainted with the visiting jobbers. The meeting afterwards resolved itself into a meeting of the National Hardware Association, and the manufacturers of Pittsburg were invited to give opinions as to the relations of the manufacturers to the jobbers. The Pittsburgers were a trifle diffident, so Mr. C. S. Van Wagoner, of the Van Wagoner & Williams Hardware Co., Cleveland, started the ball rolling. Charles Landers, of Landers, Frary & Clark; James D. Foot, of Kearney & Foot Hardware Co., New York; William H. Hayes, of the Iron City Tool Works; Hon. C. B. Lockwood, of the Lockwood-Taylor Hardware Co., and others made short speeches. At the opening of the meeting those present joined in singing the National Hymn, and at the close many remained, and, led by the nightingale of Philadelphia, T. James Fernley, blended their voices in singing "Old Folks At Home," "My Old Kentucky Home" and "The Band Played On."

ASSOCIATION MEETING.

At the executive session on Thursday morning James H. Ritter read a paper on the "Relations Between Jobbers and Manufacturers."

Digitized by Google

THE BANQUET.

The invitations to the banquet read as follows: "The Pittsburg manufacturers invite you to dine with them Thursday evening, November twenty-first, Eighteen Hundred and ninety-five, at eight o'clock, Monongahela House." Committee: John W. Hubbard, chairman; F. F. Clark, George T. Oliver, Stephen W. Tener, secretary; W. S. McKinney, Francis J. Torrance and Alan W. Wood.

The banquet was given in the dining-room of the Monongahela House. The guests assembled at eight o'clock, and filed in two by two, each being provided with a diagram of the arrangement of the tables rendering it easy for the guest to find the seat assigned him. The tables were gorgeously decorated with enormous chrysanthemums, and a string orchestra behind a screen of palms discoursed sweet melodies at intervals during the dinner. At the plate of each guest was found a handsome souvenir menu, bearing on the cover the words: "Banquet Tendered the National Hardware Association of U. S., by the Pittsburg Manufacturers, Nov. 21st, 1895." The back was represented as being fastened with a pair of hinges and the front edges bore a hasp, which was fastened by a small gilt padlock. In the centre of the back cover an anvil was represented, on which was pictured the waterways of Pittsburg. The menu was an appetizing one, and is here given:

GUEST TABLE.

S. W. Tener. Frederic Barker. Alan W. Wood. Samuel A. Bigelow. George T. Oliver. Hon. John Dalzell. John Alling. Wm. Metcalf, Chairman; John W. Hubbard. Wm. W. Supplee. Hon. Wm. A. Stone. Francis J. Torrance. F. C. Pritzlaff. F. L. Clark. H. H. Bishop. W. S. McKinney. T. James Fernley.

MENU.

Blue Points. Celery.
Clear Green Turtle. Sherry.
Olives. Pickles. Salted Almonds.
Broiled Spanish Mackerel, Maitre d'Hotel.
Potatoes, Parisienne. Claret.
Roast Pheasant, Current Jelly.
Champagne Punch.
Braised Quail, Sur Canape.
Saratoga Chips. Champagne.
Macedoine Salad. Ice Cream, in Forms.
Assorted Cakes. Selected Fruit.
Roquefort Cheese. Toasted Crackers.
Coffee. Creme de Menthe.

The order of toasts was also given, as was the diagram of the tables and the names of the guests seated.

TOASTS.

Mr. William Metcalf, Toastmaster.

During the dinner a handsome souvenir in the shape of a sterling silver shovel with a gold-lined scoop, was distributed, with the compliments of Hussey, Binns & Co., of Pittsburg. When cigars and coffee were reached and everybody had settled themselves for an intellectual feast, Toastmaster William Metcalf, with a few well chosen words, presented George T. Oliver, the well-known Pittsburg manufacturer, who responded to the toast "Our Guests."

GEORGE T. OLIVER'S SPEECH.

I have often heard it said that "there's nothing like leather." In view of the developments of modern science and the multiplied requirements of modern life, it seems to me that this phrase should be paraphrased so as to read "there's nothing like iron." Of all the elements which nature has placed at the disposal of man, iron stands so pre-eminent in importance, that all others compared with it are as dwarfs to a giant. There is scarce one of them that man could not do without and still he is as happy as he was before; but who can contemplate our condition if we eliminate that great metal which nature conceals in so many corners of the earth, until man brings it forth from its hiding place to fashion it in forms of usefulness for the necessities of his fellow man? If we think but for a moment on the part which iron plays in the economy of modern civilization, and of the straights to which we would be reduced if it were eliminated from our daily life, we are driven irresistibly to the conclusion that civilization itself, as we understand it to-day, would be impossible without it. Its uses are so manifold, and indeed so manifest, that to attempt to enumerate them, or even to cite a few of the more important, would be as superfluous as to teach the new-born infant to breathe, or the thirsty man to drink water.

Within a circle of twenty miles of where you now sit is the most important and by far the most prolific theatre of iron manufacture in the United States, or perhaps in the whole world. Here we bring together the ore and the manganese, the coal, the coke and the limestone from the lakes, the far east, and from under our own hills, and fashion them for the uses of man into all forms and shapes of material, from the humble pots and pans of the housewife to those mighty armaments and engines of destruction which have rendered modern warfare so terrible, that the nations of Christendom stand aghast at its very contemplation. No matter what may be the aims and hopes of other communities as regards the future, the present existent supremacy of Pittsburg, not only as the centre of iron manufacture, but as the arbiter of the iron and steel markets, so far at least as America is concerned, stands unchallenged and unquestioned. And I may here say, that with all deference to the hopes of our ambitious sisters, whether on the lakes or on the sea, and with a full recognition of their many advantages, Allegheny county intends to maintain that supremacy, at all hazards and against all comers, as long as the grass grows green upon her hillsides and the waters of her twin rivers unite to form the Ohio.

It is a fitting thing, and pleasing to us, that your Association, composed as it is of the great active distributers of our various products throughout the length and breadth of the land, has chosen Pittsburg as the place of its meeting. It gives us an opportunity of showing you what we are and what we are doing. It enables us in a small way to testify our appreciation of favors conferred by many of you for years past, and perhaps to indulge in a little quiet planning

Digitized by Google

for the continuance of like favors in years to come; and last and best of all, it permits us to take by the hand and become personally acquainted with many of our chief allies whose handwriting we know well, but whose faces we now see for the first time.

Men of Iron, we welcome you to the Iron City. You may not find it fair to look upon. If you want to feel comfortable you will probably be compelled to use soap and water oftener than you do at home. You will find our atmosphere murky, and the sun too often obscured by clouds of sooty smoke. But be patient with us. We don't like the smoke ourselves; it is one of our ancient institutions to which we do not "point with pride." We are making an earnest effort, with the aid of an enlightened public spirit and a liberal expenditure of money, to abolish, or at least mitigate it. If we succeed in this we will make of the good old Smoky City, of which we are infinitely proud, one of the most picturesque, as it is now one of the busiest, in all this busy land. In the meantime, however, we must not forget that the smoke which soils our hands and sours our tempers is but an index of our prosperity—the black flag which proclaims to us that hundreds of thousands of God's creatures are earning their daily bread. Behind our city's frowning mask you will see the hospitable faces of her people; and in behalf of that people, and of the city itself, with open hands and willing hearts we bid you a cordial welcome.

The next speaker introduced was William W. Supplee, the president of the National Hardware Association, who responded to Mr. Oliver as follows:

WILLIAM W. SUPPLEE'S SPEECH.

Mr. Chairman, gentlemen: I desire in behalf of the National Hardware Association of the United States to thank the manufacturers, who have so generously given this banquet, and for their extreme courtesy, generous liberality and great kindness extended to our members during their stay in your city.

In responding to this toast, I am not unmindful of the fact that nearly one hundred persons in this room have already heard quite a good deal from their president during the last two days.

One can become surfeited with the most delicious fruit, but when the fruit is served for consecutive days without a delicious flavor it may become unappetizing.

Mr. Oliver has referred to the great theatre of iron products in your districts. We have every reason to believe however, that the manufacturers of Pittsburg have no iron in their souls. I heard it stated once that the great Napoleon after his disastrous defeats, and being sent to St. Helena, stood upon that Island looking out upon the ocean and said that he had iron enough in his soul which if it could be eliminated, would supply the material for the largest manufacturer for a run of thirty days.

Some time ago when seated at a banquet, a neighboring guest remarked that after-dinner speeches were usually of two varieties, one amusing, and the other that which would soothe the hearers to sleep. I cannot expect to give you the first variety, and trust will not the latter.

There is an unwritten anecdote told of a distinguished general, I will not, however, be responsible for its authenticity. A banquet was to be given in his honor, and a gentleman who was to respond to a toast, not being familiar with military history, asked some of his friends to furnish him with some facts and incidents that would be appropriate. These he scattered through his speech, and sent the manuscript to the general for his approval, who returned it with the laconic reply: "Cut out all the old chestnuts, be brief and to the point."

About one year ago I was delegated to call with a friend upon a well known public speaker, having in advance notified him of our desire to secure him for an after-dinner speech at a banquet to be given about six weeks from that date. The gentleman referred to his memorandum book, then said he: "Nothing would give me more pleasure than to accept, but I fear it will not be possible. I see from my note book I am already booked for two other banquets, one in three weeks and the other in four weeks, and I have not yet begun any preparation for the last one."

When I called to mind the fact that this gentleman was not occupied more than a few hours each day, I thought if the present day Hardwareman was compelled to thus carefully make preparation, there would be no after-dinner speeches from that source. Owing to his multiplicity of duties his boutonniere, if prepared at all, is usually arranged while in transit on the cars, or if possible, an occasional stolen half hour after his arrival.

Ex-President Harrison once stated at a banquet in our city that all his life he had been compelled to compete with beautifully arranged remarks, which were brought forward at a banquet as impromptu effusions, or instantaneous boned turkey. Mr. Depew once stated nothing pleased him so much as to hear a man assuring his hearers he came wholly unprepared, but would give a few impromptu re-

WILLIAM W. SUPPLEE.

marks, when he knew the manuscript was already in the hands of the printers for the morning papers.

In reply to the toast "Our Guests," I feel like a fairly noted clergyman who once said: "The fact is, clergymen should be permitted to read their text after their sermon, then after his rambling remarks, if possessed of a good memory, he could always regulate the text to suit the sermon."

The National Hardware Association was founded one year ago upon equity, justice and liberality, with its object, "the promotion of more friendly business relations and mutual confidence and good will with each other and with manufacturers."

We advocate and strongly urge one point, at all which jobbers and manufacturers can safely and judiciously aim, namely, "A high standard of business methods." When this standard has been reached by both manufacturers and jobbers, most of the abuses in trade will already have been corrected.

We feel as jobbers, that the same fair return should be given for expenditure of strenth, energy and capital that the manufacturers themselves expect, and we feel that the jobbers are as essential and necessary in marketing the goods as the wage-earners are in manipulating the goods

Digitized by Google

from the raw material. We further feel that when manufacturers have conceded this fact, the jobber on his part should maintain the manufacturers' established prices for an equal quantity of goods.

When the city of Pittsburg was selected for our present meeting we were conscious of the fact that we would here enter an atmosphere that has been breathed by the most powerful and worthy examples of the high standard we have emblazoned upon our banner.

Pittsburg has for many years stood pre-eminently high over the entire civilized world as a haven where artisans in almost all branches of trade might find employment, and where industry, diligence, energy and sobriety could always reap a correspondingly high reward, and a city where extreme poverty is never necessary.

My earliest impressions of Pittsburg are connected with my first visit to this place, when I was taken by a business friend to the top of a bluff on the opposite side of the river, and my feeling was one of awe and surprise. As far as the eye could reach volumes of smoke issued from industries, gigantic they appeared then. Stern wheel steamboats were

GEORGE T. OLIVER.

receiving freight of nails, iron and glass for distribution down the Ohio, and far up the Mississippi Rivers. And great as these industries appeared then, they now sink into comparative insignificance, and are completely overshadowed in comparison with those of to-day.

The banks of your river are now lined with manufacturing industries of enormous capacity and dimensions. Your splendid and stupendous achievements have reduced the cost of your products and erected a bulwark of strength against your former foreign competitors. And while in your home distribution you necessarily come in contact with contingent local competitors, your products reach all parts of this country. Of the ten or twelve million tons of pig iron that are likely to be produced during the present year one-fifth will be sent from your immediate and contiguous district. Your iron and steel products are stupendous, and doubtless one-third of the entire rolled shapes of iron and steel product must find buyers in your market, and probably two-thirds of the various kinds of glass produced, goes from your districts.

Many other goods here manufactured challenge competition of distant makers. Your mills turn out the rails that pave the way from one end of this vast continent to the other, and her engines are built for transporting your product. The enormous growth of your gigantic fortunes is an indication of early activity, indomitable energy and work. Your wealth has been proportionally shared with the wage earners in your employ, for statistics show that a large percentage of actual profits are distributed to wage earners, who have thus received a proportionate share of your accumulated wealth. In most cases with advance in the price of your products simultaneous advances have taken place in wages, and wage earners in your midst who have prudently expended their earnings have been able to provide homes for their families, or could have prudently laid aside their excess of wages for days of ill health and old age.

Not content with your natural advantages and facilities by rivers and rail, with your progressive business enterprise, you now have in view a connecting line of water communication between the great lakes and your city. The twenty-five to thirty millions of money required appears to be no barrier to your efforts to reach the Lake Superior mines, and your determination to find a further cheap outlet for your manufactured products.

You have liberally provided numerous hospitals where every care is taken for the relief and comfort of the inmates, who enter either from sickness, accident or injury, where they can receive better medical attention than they could possibly have in the average of their homes. Another is now being erected and is to be maintained from a bequest made by a deceased manufacturer, the name quite familiar to the Hardware trade of our country. A further monument of thrift, energy and liberality is your system of libraries. One magnificent public library quite recently opened and donated to your city by Mr. Carnegie, shows the liberal atmosphere which surrounds you.

In thus providing for the universal dissemination of knowledge and intellectual resources, you place within the reach of the masses in your city a blessing beyond estimate or calculation, and it is on the possession of these intelligent, intellectual and educational endowments that our national, industrial and individual future and prosperity mostly depend.

The dividends from these libraries will be in the distribution of knowledge, education, culture and science. These advantages will extend far into future generations, and the results will lessen uneasiness, intemperance, indolence and crime.

Mr. Carnegie is but one of the many examples where the joint struggle for existence and education develops this quality of character. Those dual efforts have produced some of our most prominent statesmen as well as some of the most wealthy men of our country.

Is it therefore any wonder, recognizing as we do, the great ability, indomitable energy and liberality of your manufacturers, we are proud of being your guests to-night?

The opportunity thus offered in our country is in striking contrast to those of our foreign neighbors. A noted American writes from abroad: "Nothing is so apt to confirm our belief in American institutions as a view first of the palaces, then of the hovels of the inferior class of some of the workmen."

This cannot be considered an exaggerated picture, for authority like the Hon. William E. Gladstone cannot be questioned. He stated a few years ago, although a disgrace it was a fact, that more than two-thirds of the workmen of England had nothing better to look forward to in their old age than the poorhouse.

We of Philadelphia, who love the old Liberty Bell so well, joined in the enthusiasm created by its triumphal march both west and south, and its tongue though now long silent, did proclaim liberty over all this land.

And our hearts should all beat with pride to feel there is

Digitized by Google

no nation in the known world where advantages like ours are within the reach of the masses.

The speaker following was Congressman William A. Stone, of Pittsburg, who spoke in an able manner on "Our Waterways."

HON. WM. A. STONE'S SPEECH.

Gentlemen: I take it that any plan which reduces the cost of transportation of products from the place ot production to the place of consumption will be accepted by producers and consumers alike, and by none more readily than by this representative body of men whom I now have the honor to address.

Rapid fluctuations in prices are unhealthy to trade, and when they occur, the profits made by the few are more than offset by the losses to the many. These fluctuations in prices are frequently caused by lack of facility in transportation. The two means of transportation in this country are by water and rail, and when either fails, by drought or strikes, to perform its offices, and burdens the other with the freights of both, delays occur, and prices for transportation increase.

All freight may be divided into two classes, quick freight and slow freight. All quick freights, passengers, meats, farm products, etc., go naturally by rail; but slow freights, coal, ore, etc., naturally go by water. With quick freights the price of transportation is not so important as the speed with which they reach their destination, but with slow freights, the speed with which they reach their destination is not so important as the cheapness of cost of transportation.

But many of our great inland rivers, over which millions of dollars worth of freight pass annually, are only navigable at short intervals during the year. These inland rivers are our great national highways. They do not belong to corporations or individuals. They are the property of the whole people and have ever been under the jurisdiction and control of the Congress of the United States. No State should be burdened with the improvement of a river which flows through several States, but the cost of its improvement should be borne by the national government. Congress has recognized this obligation, and for many years has made appropriations for improving the navigation of our lakes, harbors and rivers.

This is right and proper, and is an obligation recognized by all nations. I find no fault with Congress in recognizing its duty in this regard, but I do find much fault with the system or plan which it has pursued. The general plan followed in the construction of a dam across a navigable river is to appropriate biennially about one-fifth or one-sixth of its estimated cost and string out its construction through a period of from ten to twelve years.

This work is done by the government itself through its civil engineers at an expenditure double its necessary cost, and consuming from five to six times the necessary time.

The Davis Island dam across the Ohio river a short distance below Pittsburg was over seven years in building. The Beaver dam at Beaver was not begun until long after the Davis Island dam was completed. They have been building at it five or six years, and it is not near done yet, and when we come to consider that, according to the estimate of the Government engineers, some sixty-eight dams are yet requisite to make the Ohio river navigable from its source to its mouth all the year, we are forced to the conclusion that the child has not yet been born that will live to see these dams all completed under the system now pursued.

The Monongahela river, which furnishes the Ohio more than half of its great commerce, is navigable from its mouth a distance of some eighty miles. That constant navigation is maintained by seven dams erected by a private corporation. Over four millions of tons of coal go out of the Monongahela river each year to Southern consumers at an annual cost in tolls of over $200,000. Our coal producers have begged Congress for years to condemn these dams and make this great river free, and yet Congress hesitates and excuses itself on the ground that it does not want to pay a private corporation for a franchise, when as a matter of fact it could acquire the whole seven dams by condemnation, franchises and all, cheaper than it could duplicate them. The franchise is there. The Supreme Court of the United States has declared it to be an element of damage, and our coal producers must pay it tribute until Congress comes to their relief. But Congress in its wisdom and great beneficence, desiring to do something for the Monongahela Valley, and having a keen and appetizing recollection of the very name Monongahela, went away up the river above the seven dams and built a dam. It has done no particular good. No coal passes through it, but Congress is great and good, and sympathizes with the toll-burdened producer of the Monongahela river.

I don't see any good reason why this Government should not be conducted on the same lines that a prudent business man would conduct his business. If a man going to build a house that would cost $2,000, should build $200 worth each year for ten years, this year the cellar wall, next year the

HON. WILLIAM A. STONE.

north wall, the next year the south wall, you would call him a lunatic. And yet the Government was twenty-three years building the Pittsburg post-office. It is nearly six years since the bill passed to build the Allegheny post-office. We are getting along finely. We have the cellar well up. We are in great luck. We expect to get the roof on in 1900. I mention these local matters because I am more familiar with them, but I know other localities have similar experiences to relate. I do not blame the engineers. They do the best they can for the public improvements with the appropriations doled out to them by Congress under this miserably wretched system. The blame is wholly with Congress. Has the time not come when Congress should have a lucid interval and go about this work intelligently, using ordinary common sense?

Where there is a great national highway like the Ohio river that ought to be made navigable all the year round, a river that stretches its course a thousand miles through the most productive and fertile country of the earth, Congress should take it up and finish it within the ordinary lifetime of a man. I would rather legislate for my children than for my grandchildren. Ascertain how many dams it will take to make the river navigable all the year round, and

Digitized by Google

start them all at once. Don't set one man to build them, but let the contracts to the lowest responsible bidders and let the Government engineers watch the contractors and see that they do their work as agreed upon. Where a great river like the Monongahela is tied up with toll locks, strip it of these tolls by condemning all these dams in one proceeding and lift the burdens off the backs of the long suffering coal producers and coal consumers. The people of eleven or twelve States would be alike benefited and eased of their burdens by such a course, and every poor man of the South who cooks his rice with Monongahela coal and pays his mite of toll in its increased cost will give thanks.

And treat all other rivers equally deserving in the same way. Now is a good time to begin.

A certain gentleman from Indiana, whose name I will not mention, who for many years kept his place in Congress by convincing his constituents that the country would go into bankruptcy if he was not there to object to internal improvements will not be there to interfere in the Congress soon to assemble. This argues well for the present time to begin this crusade for large expenditures. It is estimated that it will take $45,000,000 to free the Monongahela river of her tolls and construct the necessary dams and locks to make the Ohio river navigable all the year round. Let that amount be appropriated at the rate of nine millions a year and let the work all be done by contract in five years instead of twenty years at half a million a year. I use these two rivers to illustrate my idea and would appropriate to all other deserving rivers improvements with the same liberality.

I believe that the time to improve a river and make it navigable is when the products and trade and commerce of the river and the country through which it runs demand it.

But it will be said that the River and Harbor bill in the last Congress only carried an appropriation of about $21-000,000, and that this plan pursued all over the country would make it a hundred millions. Very well, let it. I believe that the River and Harbor bill ought to carry one hundred millions, or so much as is necessary to make all of our rivers capable of navigation navigable all the year round during the next ten years.

But it will be said that the revenues of the country will not be sufficient to spare those large sums for internal improvements. I believe that, and I will further admit that it will not be advisable to try to raise by tariffs on imports sufficient revenue for this purpose. Whenever you put sufficient tariff upon any import to stop importation of the article you destroy the source of revenue from that import, and I doubt whether it would be possible to raise the revenue required for the internal improvements I have suggested by tariffs unless you resort to high tariffs upon necessaries of life not produced here, and this would be unwise or impolitic. Tariffs upon articles produced here and in competition with articles produced in foreign countries cannot go further than to equalize the difference between the cost of home production and the cost of foreign production without ceasing to be revenue producing.

We have now got to raise about $500,000,000 each year to support the present needs of the government, and as the additional expenditure which I have suggested would increase our expenditure probably by eighty millions we must look to some other source than the annual revenues, especially as the Supreme Court of the United States has declared an income tax to be unconstitutional and further taxation by internal revenue is impolitic.

I have a plan which I will suggest. I do not claim it to be perfect. I do not know that it will stand the test of criticism, and I will gladly exchange it for a better one. I suggest it here because if it has merit it is one that members of all political organizations can support. It at least has the merit of being non-partisan,

We paid to pensioners in cash for the fiscal year just closed $139,749,243.80. I would use all, or nearly all, of this immense sum for internal improvements, and pay our pensioners in 2 per cent. bonds in denominations of ten, twenty, fifty, one hundred, five hundred and one thousand dollars, redeemable at the pleasure of the government after seven years. I would keep this up until our internal improvements were all made, creating at once a sinking fund of at least ten millions a year, which should be continued until the bonds were all redeemed or other securities of the Government purchased or paid out of the sinking fund whole and held as a part of the sinking fund were equivalent to the issue of the 2 per cent. bonds. The pensions from now on will decrease each year, and likewise our bond issue with which they are paid, but we will be able to complete our internal improvements in the mean time and make all of our great rivers navigable the year round. Our lakes and harbors and necessary canals will be improved and constructed, our system of light-houses and coast defences will be perfected, and we will have what this country ought to have with its immense line of coast, the greatest, grandest navy in the world. Our securities would be funded at a lower rate of interest and our bonds would be in the pockets of our own people. I would treat this immense pension payment as a war debt, and let the next generation pay it, as we let them pay a portion of the rest of it. There would be no syndicate making immense profits out of our bonds, and no financial panics. They would go to the four corners of the land to the people through the soldiers, who, if they did not wish to keep them, could easily sell them at probably a small profit, for they should have the same faith and credit that any other bonds of the Government have as deposits to secure circulation, and for all purposes for which national bonds are used.

It would not be very long before the sinking fund put by each year would exceed the bonds issued, for we must remember that it is thirty years since the war closed, and the pension payment has reached its maximum under the present laws, and no one need fear a reckless plunging into a debt impossible of payment, for in no event could the outstanding bond issue equal the national debt at the close of the war.

I would not deliver to pensioners actual bonds, but certificates of like denominations for which bonds would be issued by the Treasury on presentation of certificates, with coupons attached, interest payable every six months, with provision that if the coupons were all paid before the redemption of the bond it could be exchanged at the Treasury for a new bond of like tenor with other coupons—but this is mere detail.

The idea is to treat the pensions as a war debt, and divide its burdens with those who shall come after us. The additional expenditures on lakes, harbors, canals and rivers would give labor to our people, a market for material and encourage and stimulate trade, commerce and thrift everywhere. The north, south, east and west would all feel it and be benefited by it, and the Government would keep pace with the enterprising people who live in it, and not be where it is to-day, behind every State and city in the land in enterprise and in its manner of doing business.

I make these suggestions here rather than in Congress, with the hope that public sentiment will crystalize and enforce Congress to large outlays for public improvement with this plan or some better plan of raising the money to defray their cost.

Any plan suggested will bring out others, sometimes better ones. Congress will do nothing new, will take no new departure except in obedience to public sentiment. It is the great national mirror in which public sentiment is reflected in the shape of legislation. Congress, if left to

Digitized by Google

itself, would never originate anything or take any new departure. It would still carry the grist to mill with the stone in one end of the bag to balance the grain. But when public sentiment is aroused, as in the necessity for any new legislation, Congress is quick to recognize and obey it. It does seem to me that the time has come when we should take a new course with the improvements of our waterways and go about it in an intelligent, sensible, practical way, with an intention to make the improvements, and not continue to putter about our rivers in the fruitless way that we have been doing. If I have even succeeded in setting this large body of intelligent representative men to thinking I have been more than paid, for I well know that thinking here will beget thinking elsewhere, and grow; and when the people once get to thinking and talking about a matter they will soon find a way out of the difficulty.

Here is an evil or an error at least, admitted by all. I have suggested a remedy, not that I think it perfect, but it is the best I have, and with the hope that this or something better will grow out of it.

The next number on the list was to have been a quartette composed of Hobart Weed, F. P. Strong, T. James Fernley and John Stollberg, but the number was made general by the guests singing "My Country 'Tis of Thee."

H. H. Bishop, of Cleveland, next responded to the toast, "Fraternal Relations."

MR. H. H. BISHOP'S SPEECH.

Mr. Toastmaster and Gentlemen: I esteem it a great privilege to stand before you and address our hosts, the manufacturers of Pittsburg, upon the subject that has been chosen for me. It is a pleasure, also, to be in the city of Pittsburg and to accept the hospitalities of its manufacturers so generously tendered. A city that is the acknowledged centre of the iron and steel industries of this great country—a city that (according to the information contained in the beautiful pamphlet of entertainment which we have received from you) produces everything from a needle to an anchor, to which we are much indebted for the extension of our railway system, the construction of our bridges, the substantial features of the sky-scraping buildings, and many other articles in iron and steel which it would be tedious to mention. Among the items which are noted in this pamphlet we find it stated that natural gas is one of the products within a short distance of Pittsburg. It is unfortunate that we were not aware of this fact last evening when we endeavored to obtain some natural gas from the Pittsburg manufacturers. We bored for it with great assiduity, but struck only a dry hole. When, however, we continued these efforts farther down the river, we were more successful, and if there are any gentlemen here present who desire to find the real article in a natural gas well, I would recommend them to try in the neighborhood of Beaver Falls, and, to be more specific, to sink a well about where the office of the H. M. Meyers Mfg. Co. stands. You will certainly get a great flow, and one that will be profitable.

We must congratulate the manufacturers of Pittsburg upon the most substantial and pleasant entertainment that they have afforded us thus far, and which we know we have in prospect. They have done themselves proud, and it is a pleasure to us to acknowledge it. Feelings that have been engendered within our breasts by the most cordial reception that you have given us cannot fail to increase that fraternal regard for you which we have always felt. I might continue indefinitely in lauding the good things that you have in your city and the surrounding country; but it would not be germain to my subject, which is "Fraternal Relations."

The first authentic account that we have of such a relation is contained in a book with which it is presumed you are all familiar, and records the story of Cain and Abel; how, in a fit of anger, Cain killed his brother Abel. This is not a pleasant fraternal relation to contemplate; it is not the kind of relation that we wish to contemplate to-night. There comes to my mind another instance of which you have all, perhaps, heard—the method employed by our Hebrew brethren in disposing of their merchandise, is quite well known to all of us. If one price will not do, another will. You have all heard the story of the Jew who obtained a customer for a suit of clothing by asking him first to pay $15, and finally, after much bartering, diposing of it for $6. His customer was filled with curiosity to know how it was possible such an immense reduction in price could be made, being assured, of course, that the price at which the bargain was finally made was far below cost. The reply of the Jewish merchant indicates another kind of fraternal relations. He said: "This stock belongs to my brother-in-law, and I want to bust him up." We certainly cannot admire that kind of fraternal relation.

The much touching and pathetic example of an ideal fraternal relation may be instanced as that of those characters, Damon aud Pythias, who each stood ready to sacrifice his life for the benefit of his friend, if necessary. This ideal is so high that we cannot hope to reach it. But, gentlemen, we have in the ranks of the National Hardware Association two members who are not blood relations, and who are competitors in business, between whom the relations are almost as close and as nearly ideal. It would not be proper for me to give any names in this connection, but I will simply state that, since coming to this city, I have ascertained that we have two members whose affection for and confidence in each other is such that they each express the wish that in case that they should first be called away that his friend and competitor should act as executor. Gentlemen of the National Hardware Association, we have a most worthy example in these two members of ours as to the feeling that should exist between us. It is but a short time since our Association was formed; it is but a short time since many of us met each other on the first occasion, yet I feel proud to say that even with this short acquaintance we have learned to esteem and prize the friendship of our brethren in the Hardware trade, and that, as the years roll by, we shall come more nearly to that ideal state of friendliness and fraternal relations that we announce as one of the objects of our coming together. We made much progress in this direction at our first meeting held in Cleveland a year ago. We have made still more progress at the meeting just now under way. And I sincerely hope that before its termination it may come about that every man who has come here as a representative of the jobbing trade may become acquainted and learn to love every other one who is here on the same errand.

I believe, gentlemen, that we are building better than we know, that the effects of the friendship which we are now establishing, and the confidence in one another which we are fostering, must be far-reaching and effective in its results. It is a great thing for us to feel towards each other as though we were brothers, that we had a right to commend or find fault with one another, and that we were sure that the spirit existed that would enable us to thus find fault without giving offense, to enable us to live together in peace and happiness as no other courses can make possible. Aud now, gentlemen, manufacturers of Pittsburg, and in addressing you thus I mean to address all manufacturers of the United States, we sincerely hope that the example which we are striving to place before you may result in the establishment of better fraternal relations among yourselves. We desire to see you dwelling in peace and harmony. We desire to see you obtaining the proper recompense for the time, brains and capital which is necessary for the successful prosecution of your respective businesses. We do not lose sight of the fact that you have many difficulties to contend with in effecting such an organiza-

Digitized by Google

tion, and it may not be possible that all manufacturers should be impressed in the same organization, but it is certainly possible that certain branches may ally themselves together for the purpose of accomplishing the same result that we are endeavoring to accomplish—to become acquainted with your competitors and those whom you consider, or have considered, your natural enemies. I believe that both manufacturers and merchants, as a rule, are men of honor, that they can be approached, that they can be led by their affections rather than driven by abuse. But, gentlemen, I wish to come even further than this. If you can establish an Association of this kind, or if you cannot, the National Hardware Association desires with all its heart to establish ideal fraternal relations with you. We are anxious to make you our friends. We are already yours. We can see many ways in which such friendship would be valuable to all. With your counsel and your advice, your experience and your ability, we can learn many things that are now entirely unknown to us. We may also say without egotism that it is possible for us to give you information in directions to which you have not heretofore turned your attention. We want to be close to you, we want admission to your councils, privilege to offer advice, and a reasonable consideration on your part of such advice. We desire on this occasion when we are gathered around the festal board at which you are the hosts and we the guests, to offer you the olive branch of peace. We do not come as enemies—we come as friends. Many of you were present this morning when the subject of the relations between manufacturers and jobbers was so ably treated by one of our members. We hope that this occasion may be the opening wedge for a closer approach to your affections. We have to thank you for the kindly suggestions that were tendered to us upon the occasion of that meeting. We desire particularly to thank that one of your members (he was not a Pittsburg man) who took upon himself that most unpleasant task of calling attention to our faults. We thank him, if possible, more heartily than those who simply commended us for our good deeds and did not point out our errors. Such a man always makes the strongest and best friend. It is not necessary for me to mention names in this connection.

The subject of fraternal relations is one so broad, so far-reaching, that it would be possible for those better accustomed to addressing an audience like this, to amplify it and extend it into many channels. It does not seem appropriate upon this occasion, however, that we should go into its more general features, and I, therefore, content myself with confining it to the relations between you as manufacturers and our Association as jobbers. We have offered you an opportunity to become our friends. Are you willing and ready to avail yourselves of it?

T. James Fernley then sang "Little Alabama Coon." When reaching the chorus he produced a real little coon, evoking great applause. The last toast "Pittsburg," was responded to by Congressman John Dalzell, of Pittsburg. Mr. Dalzell spoke with eloquence and force, carrying his audience, as it were, spell-bound.

SPEECH OF HON. JOHN DALZELL.

Our able and accomplished superintendent of the last census not long since gave emphasis to two important facts. One is that the municipal, industrial and commercial life of civilized nations has invariably centered in its great river or inland water cities. He cites for example the river cities of Loire, the Rhone, the Garonne and the Seine in France; the German towns of the Aller, the Elbe, the Rhine and the Baltic; and the magnificent aggregations of population, wealth and enterprise that, adorning the banks of the Clyde, the Tyne, the Severn, the Mersey and the Thames, contribute to Great Britain's contest for commercial supremacy. The other fact is that we have reached that stage of national growth which is most strongly marked by municipal and industrial development in harmony with this same law. A moment's thought will furnish the proof of this statement. Think of the valley of the Hudson with its multiplied and multiplying towns; think of our own great Pennsylvania city that on the banks of the great Delaware reaches out for more extensive commerce; follow the windings of the beautiful river that starts from our own city in its journey to the Gulf; think of the valleys of the Missouri and the Mississippi and of many other rivers I do not stop to mention; call to mind the cities that stud the shores of our great lakes; think of the splendid monuments of American pluck and enterprise that hold the key to the destinies, commercial, political, and social, of our great West and the Pacific slope.

But if our history of municipal advance has followed in the groove of an already established law of economic growth, it has outrun all the precedents that have gone before. The great cities of any other nation in the world are comparatively few in number. Ours are manifold. For the purpose of comparing figures as to indebtedness, the census selects a hundred American cities. There were in 1890 443 American cities having each a population of 8,000 or upward; within the preceding 10 years such cities had increased 100 per cent.

When we bear in mind that each of our cities draws sustenance from and gives sustenance to a more or less extended area of territory; when we think of their diversified industries, the wealth of their products, their contributions to commerce and their consequent creation and employment of continually increasing facilities for inter-communication by land and water, of the social and moral interests of their inhabitants; of their government, the stupendous importance of the cities of the country as factors in our civilization becomes apparent, and I might add appaling.

Of all these cities small and great, I know of none the history and character of which are fuller of instructive lessons, and certainly none that I can with propriety speak of in this presence than Pittsburg.

She furnishes a subject rich in suggestion from many and varying points of view. If I deal with it from a material standpoint, it will not be because there are not intellectual and moral aspects even more interesting. That community wherein a private citizen has founded, as Andrew Carnegie has, institutions devoted to science and the liberal arts, free to all the people at a cost of many millions and where other generous benefactors have moved in the same direction, need not be ashamed to boast of its claims to intellectal and moral eminence, nor need it entertain any fears of their disallowance.

And if, passing by these inviting themes, I should cast a look backward to the beginnings of our municipality, I fear I should be tempted to neglect the present for the allurements of a singularly romantic past.

There never has been a time since civilization unfurled its banner west of the Alleghenies when Pittsburg has not been a place of commanding importance. The unbounded ambition of Louis XIV. enlisted in the attempted conquest of a continent, here planted Fort Duquesne, and around its history clusters, in large part, the bloody story of the struggle of two European races for the lordship of the Mississippi valley. At a time only a little later Fort Pitt became worthy successor to Fort Duquesne in our colonial struggle for independence; and there is no spot in all the universe where the saving virtues that glorify humanity found more frequent exercise in the pioneer courage of the men and lofty heroism of the women, who mid savage forests and still more savage men blazed the path from barbarism to Christian light at the junction of these two rivers, now the peaceful carriers of our commerce to the sea. The contrast between the past and the present is startling.

The name of Braddock, from the standpoint of a century or more ago, suggests the stubborn old Englishman who

Digitized by Google

led his troops to savage slaughter on the banks of the Monongahela. It suggests now the great Carnegie works, whose pillar of cloud by day and pillar of fire by night point the way in America's industrial march to the conquest of the world in manufactories. And so, did time permit, I might continue the significant contrast, for primitive forests and fighting men have given way to the rapidly growing city and the conquering arts of peace; but I leave the enticing path to follow in that which deals with practical affairs.

Pittsburg as legally bounded is no more the real Pittsburg than is the London of legal definition the real London that dominates England. All Allegheny county is Pittsburg, whether so denominated by law or not, and so in any consideration of this community's relations to the outside world, it must be considered.

Its relation to the nation is primarily that of a great manufacturing center, and as such it illustrates the highest and best development of our modern industrial system. There is nowhere else a richer field for the practical study of economic questions; but into that I must not wander, lest I be led into prolixity and possible controversy, and I would avoid both.

Wealth in manufacture demands two things, facility of supply and of distribution—raw material in other words, and transportation. I use the term raw material, of course, in its ordinary acceptation, not intending to discount the value of human labor. With respect to both, Pittsburg's advantages are great, and yet they might be made greater.

That, such as they are, they have been made the most of, is apparent from results.

Without stopping to give you figures, two things will be conceded, the diversity of our industries and the immensity of our product.

We are producers, among other things, of coal and coke, iron, steel, glass, in all its various forms, copper, silver, lead, brass and tin plate.

We make one-fifth of the iron and one-third of the steel of the United States.

We make one-half of the entire product of table glassware. A single firm, and it is only one of a number has the capacity to make 10,000,000 of square feet per annum of plate glass.

We have the largest cork factory in the world, and I believe one of the largest pickle establishments. We are large manufacturers of tobacco. The presence in our midst of an iron exchange, a coal exchange, grain, brewers and stock exchanges, point significantly to the variety and extent of our industries.

We send out on an average every year 100,000,000 of bushels of coal, or 4,000,000 of tons.

According to figures made some years ago, Pittsburg's local railroad tonnage reached in a single year the colossal aggregate of 18,000,000 tons. According to the census of 1890 the railroads centering, or in part tributary to Pittsburg, moved in the year preceding 74,500,000 of tons.

The same authority gives the total annual tonnage of the Ohio, Monongahela and Allegheny rivers as 11,500,000, and the men employed about 6,000.

No other city, large or small, on this continent, or any other, can make such a relative showing as this.

But the mere enumeration of the products of our industry will hardly convey any idea of their variety. It is necessary to stop and think of the multitudinous forms assumed in our manufactures. We make steel small as a needle, pliant as a Damascus blade, and ponderous as the armor that protects the cruiser that carries our flag and defends our national honor.

Pittsburg bridges span streams many and widely separated from each other.

Pittsburg electrical appliances keep abreast of the times in that marvelously advancing science.

Pittsburg locomotives are to be found not only in our own country, but in Central and South America, Asia and the islands of the sea, drawing trains equipped with Pittsburg couplers and Pittsburg air brakes.

But I am not attempting a catalogue. I mean only to be suggestive.

Consider now for a moment the raw materials of all these manufactures, the coal, coke, limestone, sand and a hundred things not now to be mentioned, and that these have to be conveyed here from the place of their production; consider that the manufactured product has to be carried to market, and you will appreciate the fact that Pittsburg's greatness in the present and Pittsburg's destiny in the future is to a very large extent a question of transportation facilities. It would matter little that we have here courageous capital, business tact and energy, machinery that testifies to the triumph of ingenuity, brawn and muscle, labor in abundance, if we had not the fuel and the ores at reasonable cost; and it would matter little that our store-houses were filled with finished products if the cost of carriage to market should put them beyond the reach of buyers.

Manufacturing supremacy means cheap freights from the mines to the furnace and from the factory to the mart; and by as much as you cheapen either or both, by so much do you add to the continuance of that supremacy.

Pittsburg's possibilities as to raw materials and as to markets for her finished products, as nature designed that they should be, who can measure them?

Our city lies in the very bed of a bituminous coal field containing 3,000 square miles more of coal than underlie all England. Gas and oil are all around us. Ore fields illimitable are not far off.

Take your map and trace the windings of the Ohio and Mississippi rivers, and you will find that in their journey to the sea they wash the banks of fourteen great States. And these States are the seat of future empire. Their possibilities as to population and production are immeasurable. It is calculated that you might place our entire population in the State of Texas, and that State would not be more densely populated than is Germany. Apply the rule to the great Ohio and Mississippi valleys, and whose imagination can grasp the commercial glories of the future? What a market is here for reciprocal trade!

And then, again, no careful student of affairs can doubt that the day is not far distant when reciprocity of trade shall open to us the markets of the great and growing republics of South and Central America. Nothing but a narrow and illiberal governmental policy can postpone the coming of the time when foreign flags shall testify to the presence at our wharves of foreign keels, bringing to us foreign merchandise in glad exchange for our own.

Hearken then to the conclusion of this whole matter. Pittsburg's place in the Nation is that of a city with interests of such national importance as to demand such national care as shall make real all the advantages that nature intended her to have. We need improved waterways, and we need new waterways. And in this respect government owes us a duty, for the reason that without its aid we cannot have them. Private capital may, and does, build railways. With lavish hand it has gridironed the continent; but railways cannot take the place of waterways, and private capital cannot safely touch our rivers. Under the most far-reaching and despotic power for the exercise of which our Federal Constitution provides the power to regulate commerce, the jurisdiction of the national government is, when exercised, exclusive and supreme over our waterways.

The possession of the power carries with it a responsibility for its wise exercise, and I know of no subject more worthy the favor of an enlightened statesmanship than such

Digitized by Google

a system of internal improvements as would give to Pittsburg the place for which God and nature plainly intended her.

Since 1835, the year in which the first appropriation was made, Congress has appropriated for the improvement of the Ohio river only $9,000,000, and for the Ohio and her tributaries less than $22,000,000, sums that in comparison with the expenditures made by private enterprise are mean and insignificant. Following this line of thought, I have two practical suggestions to make in the line of Federal legislation.

First—The Monongahela river, which is now in part under the control of a private corporation, should be made free at government expense, upon terms that shall be just to the stockholders of that corporation. The Monongahela is a constituent part of our great national system of waterways. Having assumed control of its headwaters, and of the Ohio, into which it flows, the national government should control it altogether, and there should be no toll gates in it. It is due to the producers of the Monongahela valley and of West Virginia above that they should not be handicapped in their competition with other like producers, and especially not in unjust competition, as they are now, with others nearer to their markets who have had the benefit of government aid in freeing their highways.

Second—It has been declared by expert authority that it is feasible to connect our harbors with the waters of Lake Erie by means of a ship canal. The growing necessity of such an enterprise to Pittsburg is beyond debate, and its importance is beyond calculation. Cheaper freights for our raw materials, cheaper freights for our products of factory, field and mine, more extended markets and consequent increased products, all these must be the legitimate outcome of its consummation.

Such a canal would be an instrument of interstate commerce, and it is therefore not the province of any particular municipality or State, even if the power existed on their part, to undertake its construction. It must then be built either by the Nation or by private capital; and if by the latter either with or without Federal aid. In the multitude of such projects now pressing for legislative recognition from all parts of the country, there is but little likelihood of the assumption by the government of the cost of this particular work. But there is no reason in my judgment why private capital should not receive, short of such assumption, government aid in another way. Congress has the undoubted right under the Constitution, so the Supreme Court of the United States has declared, to create a corporation as an instrumentality of interstate commerce. My plan would be the creation by Congress of a corporation to construct this work; the guarantee of that corporation's bonds upon such conditions as would reasonably secure the United States against any ultimate liability for their payment; and upon the further condition that the government might at some future day, upon terms fair to the corporation stockholders, make the canal a part of our national waterway system. I do not pretend now to outline a charter or to go into details; but if capital can be raised and the project bona fide undertaken on the basis that I have suggested. It is, it seems to me, well worth while, with reasonable prospects of success, to attempt to secure from Congress the needed legislation, and in such attempt, so far as my humble efforts can go, they shall be cheerfully and enthusiastically given.

Upon the whole, I conclude that our past is secure, at least, and that if we seize the advantages that nature has given us, and those that our own ingenuity, energy and courage can further supply, our future will be likewise secure. I foresee, and I trust that the vision may be of a well-grounded faith, and not of inclination merely, a great city, reigning like a queen from her dominant seat, at the headwaters of the Ohio. Into her lap an extended commerce shall pour with lavish hand the wealth of many climes. Ready of reach from all the sources of supply, the products of field, forest and mine shall be brought to test the magic of her industry, and, recreated, shall go forth to minister to the needs, the tastes and the pleasures of a still advancing civilization. The comfort shall be here, let us hope, of a city where all that science can contribute to life and health shall find practical illustration; where law shall reign over a people living in the midst of influences that shall educate and uplift, and where the crowning glory shall be that her men and women shall be worthy of their surroundings, and shall be pledges of a still more glorious future.

At the conclusion of his speech three cheers were given for him as chairman of the Ways and Means Committee. After singing "Old Acquaintances" the guests dispersed.

IT WAS WELL EARNED.

At a session of the Association the following resolution was offered and unanimously carried:

Resolved, That the thanks of the National Hardware Association of the United States be tendered to Mr. T. James Fernley, for the very efficient and energetic manner in which for the past year he has filled the office of secretary-treasurer; that the Association appreciate the sacrifices he has made of his own private interests in order that nothing might be left undone that would add to the welfare of the National Hardware Association, and that we would request the executive committee to secure his services for the ensuing year, if they can do so and at a salary commensurate with the high character of his services.

Review of the Markets.

The market remains in about the same position that has characterized it for some time, the reduction in the price of Tacks being the most important item of change during the week. Just how great the change in this article has been, will be seen by referring to our report below. Prices as a rule are well held, although there is some unsteadiness caused by a disposition to cut rates in some quarters. The call for staple goods from jobbers has been quite active, but transactions from first hands are not extensive. The weather all over the country seems to have been very favorable for building purposes, and the line of Hardware required therein has been taken as freely as any other. While for the moment business is somewhat disappointing, dealers show no signs of discouragement, and look forward to 1896 with great hopes.

Tacks: The new discount sheets are out. The list of March 25th is revised as follows, there being in addition the usual discount of 2 per cent: for cash:

Papered, Dozened and M's. Full, Half and Quarter Weights.	Straight Weights. *
American Carpet Tacks, Blued	80 & 30%

Star weights (**), 5 per cent. extra; Standard weights (***), 10 and 15 per cent. extra, and special weights (****) (tinned and coppered carpet tacks only), 10 and 10 per cent. extra.

Wire Nails: There is more stir in the market, which shows substantially that the large stocks accumulated by jobbers and dealers, before the general raise in prices have been greatly decreased, at the same time the stocks in the hands of the manufacturers have largely increased, making it necessary to curtail the output of the mills to a considerable extent. The new freight blue book so much talked about is merely a concentration of the different freight rates that has been compiled for the convenience of the manufacturer. He can by this arrangement find the required information in the one book, where before it was necessary to consult a dozen different sheets. There is no change in prices. Quotations are as follows: Carload lots or mixed cars, $2.25 per keg, base, f. o. b., Pittsburg; less than carload lots, $2.35, base, f. o. b., Pittsburg. All shipments of carload lots are subject to the following advances over delivery price: 2½ cents at Chicago; 3 cents to New York, Philadelphia, Baltimore and the Southwest; 3½ cents to New England, St. Louis, New Orleans and Mississippi River points. The New York price for carload lots on dock is $2.43 and small lots out of store are held at $2.53.

Cut Nails: Prices for Cut Nails have not changed since last writing. We quote as follows: Carload lots, f. o. b., Pittsburg, base, $2, with the following advances on former delivery prices: 2½ cents to Chicago; 3 cents to New York, Philadelphia, Baltimore and the Southwest; 3½ cents to

Indiana Ladder Company,
INDIANA, PA.

St. Louis, New Orleans, Mississippi River points and New England. The delivered price on small lots of Cut Nails is 10 cents more at any point than carload lots at the same point. The following are the New York prices: Carload lots on dock, $2.18; small lots on dock, $2.28; small lots from store, $2.30.

Glass: While the output continues large, the demand has been sufficient to prevent any undue accumulation, though stocks in jobbers' hands have not been entirely absorbed. The value of common Window Glass imported during the nine months ending September 30th was $503,990, against $678,906 same time in 1894. Quotations are unchanged. The demand for Plate Glass is very good, and the factories are kept busy to fill orders without delay.

Linseed Oil: Market steady. The demand is not especially active. Raw oil is worth 42 cents; boiled, 45 cents; Calcutta raw, 48 cents, as quoted by the Dean Linseed Oil Co., November 18th.

THE ROCHESTER TRADE.

We have little of new interest to give you concerning the condition of the Hardware trade in this locality. Collections seem to show some improvement, and possibly there is a little improvement in the demands of our small Hardware dealers for goods. However, we would say that business is far from being what we are in the habit of looking for at this season of the year. We think it very likely that the exceptionally fine and pleasant weather has had a detrimental effect on business, and that if we could get some cool weather, that it would cause a demand of seasonable goods, and trade would immediately show quite an improvement.

WEAVER, PALMER & RICHMOND.

THE CHARLESTON TRADE.

We report continued favorable condition of trade, and were agreeably surprised at the volume of October business. Our travelers are much pleased with the prosperous condition of the country, and delighted with the orders they are able to send in. Our mail orders are far above the average of past years, and we have had the pleasure of greeting in person a number of merchants who have not visited this market in years.

The report has gone out that the South is not only anxious to buy, but willing and able to pay, and commercial tourists who had for years stricken this territory from their list, as being undesirable, have again put the now favored section back, not in doubtful or obscure hieroglyphics, but all in capitals.

While some trade has unquestionably been diverted from Southern jobbers by this friendly invasion, we do not censure their presence, or envy them their successful effort to secure a small portion of the abundance offered.

We note a marked indisposition to make further advances, and feel that it would not require unusual persuasion to obtain concessions from present prices in some lines, and this supposition is by no means a source of congratulation or even desirable. Production has undoubtedly been much stimulated, and manufacturers have been unable to fill orders promptly, thereby creating the impression that continued scarcity would be the rule rather than the exception; but now that the orders requiring this unusual effort to fill, are filled, it is more than likely that stocks are already accumulating, and unless promptly distributed, will have a depressing influence on prices.

The South Atlantic States having been severely stricken by storms and almost impoverished by low prices of their farm products, had neither the disposition or ability to purchase largely for two years, but needing everything now, have been liberal patrons of the Hardware manufacturer, and will so continue until the next crop is planted and cultivated to harvest.

Our information about the West and Southwest is not cheering, and complaint about dull trade and no business doing, very general. These sections doubtless bought largely in early summer, but have not been able to distribute their stock, and will certainly not need replenishing

for some time to come. Until compelled, no orders will be sent to manufacturers, and this is a serious matter to all. In the meantime, factories are being driven to full and even extra time, and in a short while accumulation will amount to annihilation and prices be suddenly and unwarrantably reduced.

We have had no special complaint about prices up to present writing, and are hopeful that we will be able to maintain given quotations and not be compelled to recede as the season advances.

Payments of spring bills with fall settlements have been very satisfactory and few balances are carried over. Settlements for fall purchases have been exceptionally good; many bills have already been discounted. We have on file orders that will keep us moderately busy during the entire month, and the transient trade and mail orders will enable us to record the most active November since 1891.

MARSHALL, WESCOAT & CO.

THE MINNEAPOLIS TRADE.

General business conditions continue favorable. The good weather we have been having has enabled building operations to be carried on to fully as good advantage as at any time during the year. Prices are fairly well maintained. There has been a little feeling of uneasiness regarding the price of nails, and some dealers have shown a disposition to force them somewhat, anticipating a possible decline; but there is is a firmer feeling at the present time; nevertheless no one seems disposed to purchase any more than is required for immediate consumption. Seasonable goods seem to be moving about as usual; skate trade already opened up although no sign of ice. Sawmills are closed down nearly a month earlier than usual, thus throwing a great many men out of employment; but a great many of these mill employees go into the woods during the winter. The city has resumed work on the new reservoir and filter, thus giving employment to a great many men that would otherwise be without anything to do. The new rolling mills at Columbia Heights are now nearly ready to commence operations, and under most favorable auspices. Certainly at the present price of iron, the mill ought to be successful. Flour mills are running full time and turning out more flour than ever, and rushing their goods East via the lakes before the close of navigation.

Rain, and plenty of it is needed throughout the country north and west of us. We have not had as much as seems to be required. The lakes and sloughs are very low. Have had a little rain recently but not a sufficient amount to do much good. We hope there will be a large snow fall to offset this and thus give the assurance of good crops another year. While the price of wheat and other produce is low and the farmers generally complain, still as a whole we doubt if the farmers have ever received as much net per acre for their produce as they have this year on account of the exceedingly large crops of every kind. They ought to feel quite well satisfied.

W. K. MORISON & CO.

THE OMAHA TRADE.

The last half of the week starts with a trade that is somewhat uneven, and without much life or activity. The warm weather prevailing has limited the demand for seasonable goods, and some seasonable weather would improve matters to some extent. Very little grain is moving, and the amount going forward is much below the average at this season. Corn which is selling at an average of about 14 cents throughout the State is worth, when fed, at the present price of stock, 25 cents, so that an unusual amount of feeding is being done, which will delay the movement of money and merchandise until early next year, when a material improvement is looked for.

On the whole there is little ground for complaint. Prices are fairly well maintained, and there appears to be a disposition on the part of both jobbers and manufacturers to cooperate in the matter of securing a living margin of profit. This is a hopeful sign, and it is hoped the disposition will be nursed and tended by both parties in interest. Collections might be better. They have been worse.

RECTOR & WILHELMY CO.

THE PITTSBURG TRADE.

Trade is moving along in very fair volume, but there is no great activity in it. Merchants may be said to be waiting developments, and we have great hopes that after the turn of the year there will be a steady growth in demand and that prices will be well maintained. This week, November 18th to 23d, was given up largely to the visiting members of the National Hardware Association of jobbers, meeting in the Monongahela House.

LOGAN, GREGG & CO.

THE GRAPHITE TRADE.

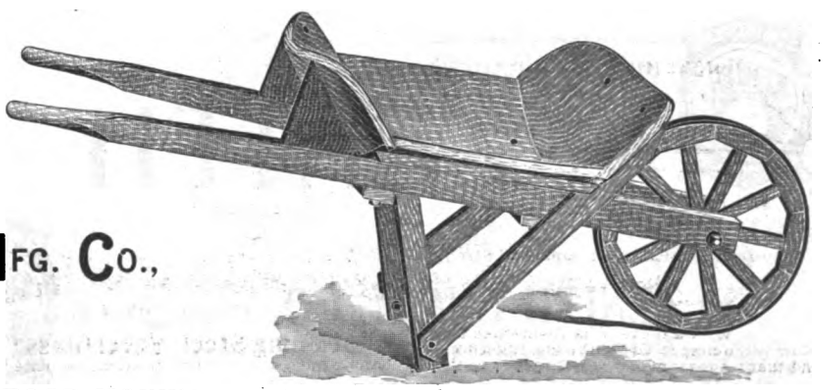
We have deferred our communication until a later issue that full returns for October might reach us from our branches.

The result has fulfilled our expectations, and the total for the month has slightly exceeded any previous month in the history of our business. Crucible sales lead the record, Pencils, Lubricating Graphite, Cycle Chain Lubricant and the other productions closely following. While this result is in a measure due to active demand, another factor is the enlarged capacity for production through a completion of manufacturing facilities.

Vice-President John A. Walker has just returned from a friendly trip to St. Louis, Kansas City, Denver, Omaha and Chicago, and reports the outlook for big orders very encouraging.

The month closed with plenty of orders on the books, and mail inquiries for particulars and prices of the various Graphite products to warrant the hope of plenty to come. Accounts are settled promptly and no clouds in the horizon.

JOSEPH DIXON CRUCIBLE COMPANY.



Allerton, Clarke & Co., No. 97 Chambers Street, New York, have taken on the agency of the Richmond Bicycle Co., Richmond, Ind.

The Allerton-Clarke Co., No. 118 Lake Street, Chicago, have the exclusive Western agency for the Lockwood Mfg. Co., Norwalk, Conn.

The other day a HARDWARE representative, while in the well-known house of Schoverling, Daly & Gales, New York, met the genial Col. Ben Lovell, of the John P. Lovell Arms Co., Boston. The Colonel was as full of enthusiasm and "go" as is his wont, and had with him a new Bicycle Handle Bar, which we really think is to be one of the great winners. We hope, at a later date, to illustrate and describe this really wonderful improvement in the way of bicycle construction.

"SCIOTO" for R. R. or Canal Work.

A thoroughly first class bolted barrow. Full sized Tray. Well planed, cleated, braced and bolted. Legs and cross pieces gained. Knocks down for shipping and is easily set up.

HARDWARE MANUFACTURERS' RECORD.

Hardware manufacturers, the country over, are requested to contribute to this page. News of new factories or companies, changes, improvements, etc, will be gladly received, and promptly published.

New Companies, Etc.

Albany, N. Y.—The Economical Egg Beater Co. has been incorporated by C. F. Rushmore, Luther C. Warner and J. Sheldon Frost; for the manufacture and sale of a patent egg beater. Capital stock $2,000.

Anderson, Ind.—The Schofield Bolt Co. will establish a plant with a capital stock of $120,000. The directors are A. B. Bower, F. R. Schofield, B. P. Power, W. C. Schofield and C. W. Schofield.

Brilliant, Ohio.—Articles of incorporation have been recorded authorizing the operation in this State of the new Brilliant Tube Pipe Works. The incorporators named are J. R. Jackson, of New York; Thomas Hackett, of Pittsburg; Joseph Spiedel, W. B. Simpson, W. F. Stifel and Geo. K. Wheat, of this city. The new company will manufacture, sell and deal in iron and steel pipe of all kinds; mine, buy and sell coke and coal, and indulge in a general manufacturing business.

Brooklyn, N. Y.—The Brady Mfg. Co. has been incorporated to make and sell machinery, tools, etc. The capital stock is $100,000, and the directors for the first year are E. C. Ward, Elizabeth Brady and James Brady, of Brooklyn, and J. E. Woodbridge, of Bridgehampton.

Brooklyn, N. Y.—The Connolly Specialty Works have been incorporated by Calvin Detrick and John A. Keohl, of Brooklyn, and Frederick Carragin, of New York City; to deal in plumbers' specialties. Capital stock $10,000.

Camden, N. J.—Articles of incorporation have been filed in Camden by the Keystone Filter Co. The objects of the corporation are to manufacture and sell all kinds of filters. The capital stock of the company is $40,000. The incorporators are E. B. Stone, Charles F. Dirmitt, Edward A. Hibbs, Robert P. Weaver and Samuel Hibbs.

Cleveland, Ohio.—The Colwell & Collins Bolt Co. has been incorporated by A. L. Colwell, C. E. Collins, H. R. Collins, H. A. Garfield and E. C. Collins.

Chicago, Ill.—Wallis, Meacham & Co. have been incorporated; capital stock, $10,000; to manufacture Hardware, etc; incorporators: Adolph Karse, Morris Schuhmann and William A. Rogan.

E. St. Louis, Ill.—The Denverside Tool Co. has been incorporated; capital stock, $5000; to manufacture well tools; incorporators: J. A. Douglas, G. O. Hough and B. F. Hart.

Hartford, Conn.—The Schofield Gear & Pulley Company has been organized to manufacture pulleys, gear, shaftings, etc. Capital stock $8,000. Incorporators are James B. Shannon, George S. Smith, Charles B. Lee and William W. Collins, of Norwich, and Aaron Lucas, of Preston.

Lake Odessa, Mich.—The Lake Odessa Mfg. Co., with a capital stock of $10,000, has been formed, and will manufacture the Domestic Washer. The officers of the concern are: President, Don J. Durkee; vice-president, George A. Weed; secretary and treasurer, E. J. Gray.

Newark, N. J.—The W. W. Pryor Hardware Mfg. Co. has been incorporated. The company will manufacture and sell Hardware in this city and other places with a capitalized stock of $10,000. The incorporators are William W., Frank L. and Robert W. Pryor and John Einwachter, all of Newark.

New York, N. Y.—The Electric Flameless Stove Co. has been incorporated by J. L. Follett, H. S. Follett, D. F. Pond and others, of New York. $500,000.

Ottawa, Ill.—The Standard Fire Grate Co. has been incorporated by John W. Channel, Warren C. Riale and Edward W. Bach. Capital stock, $25,000.

Passaic, N. J.—The American Art Casting Co. has been incorporated to cast, manufacture, buy, sell and deal in metals and other goods and wares of all descriptions; to buy, sell and make moulds, dies and machinery, etc. Authorized capital, $150,000.

Philadelphia, Pa.—American Pulley Co. has been chartered for the manufacture and sale of machinery, etc.; capital, $50,000. Directors: George V. Cresson, Ashbourne, Pa.; Thomas Carseaden, New Britain, Conn.; Giles L. Reynolds, Morris W. Rudderon, Henry Morris, Philadelphia.

Pittsburg, Pa.—The Wilson Mfg. Co., newly incorporated with a capital stock of $25,000, with H. G. Wilson, of McKeesport, as president, have decided to locate factory at 24th and Parsons Street, and will manufacture Hardware novelties.

Portland, Ore.—The Cheney Mfg. Co. has been incorporated to manufacture, buy and sell tools, implements and machinery, and do a general commission business; capital, $5,000; 200 shares of $25 each; incorporators: D. H. Cheney, Ella R. Cheney and H. W. Hogue.

Changes and Removals.

Jackson, Mich.—The Coldwater Stove Works have been purchased by the Novelty Mfg. Co., and they will remove the plant to Jackson.

Lockport, N. Y.—C. C. Harris, of Toronto, will move his tin foil manufacturing plant to Lockport.

New Haven, Conn.—D. W. Perkins, of Plantsville, rivet manufacturer, will remove to this city owing to the scarcity of water where he is at present situated.

Whitman, Mass.—The Lyman Reed Tack Mfg. Co. moved its machines to this place recently, and in the future will carry on business at the East End of town.

New Buildings and Improvements.

Belfast, Mass.—The new machinery has been set up in Howard & Son's, which doubles the capacity of the factory. The force of workmen is being increased, and soon the factory will be running to its fullest capacity.

Granite City, Ill.—It is said that large additions will soon be made to the St. Louis Stamping Co. Works. The steel plant is to be enlarged so as to nearly double its present capacity, and an electric lighting plant is to be installed. In addition to these improvements the managers contemplate the erection of a number of dwelling houses, the construction of sewers and drains, and the making of other minor betterments.

Indianapolis, Ind.—The Lilly Varnish Co. has completed its new plant, and is in a position to largely increase its output.

Philadelphia, Pa.—A one-story brick tool house, 25x15 feet, is being built by the Breuil Mfg. Co., Twentieth and Clearfield Streets.

Rankin, Pa.—An addition is being made to the wire works of the Consolidated Co. The addition will comprise a cooper shop, which will employ over 100 more experienced hands. The new cooper shops will turn out over 5,000 wooden kegs per day.

Utica, N. Y.—The Standard Harrow Co. have about completed an addition to their foundry. It is a brick building 100x75 feet in dimensions, and will greatly increase the facilities of the company's plant.

Recent Fires.

Cuyahoga Falls, Ohio.—The Falls Rivet & Machine Co.'s Works were recently damaged by fire. The building was burned from the cupola, which was in the center, back to the end. The part that was burned was about 100 feet long and 70 feet wide. Nearly 125 men were employed in this department. The loss is estimated by the company at $25,000, fully covered by insurance.

Philadelphia, Pa.—The nail works of Phillips, Townsend & Co. were recently visited by a destructive fire. The loss is estimated at $150,000, fully covered by insurance. One hundred men were thrown out of employment.

General.

Falconer, N. Y.—The Holmes-Peterson factory, situated on the Johnson tract near the junction, will be started up the first of the week. Butting and carving machinery is to be made here. The number of employes at the start will not be large.

Fort Payne, Tenn.—The Fort Payne stove works, which have been idle for some time, have resumed operations with a force of seventy-five men, and an additional fifty men will be put on in a short while.

Kanawha City, W. Va.—The Columbia Barb Wire & Nail Co. have resumed operations in their plant, and will probably add machinery.

Kingston, Mass.—The tack factory of Frank W. Maglathin & Co. has started up, after being closed several weeks.

Portsmouth, N. H.—The Stovene Mfg. Co. have decided to give up business and sell the plant.

Wheeling, W. Va.—The La Belle nail factory, which has been off for the past six weeks, will in all probability resume operations soon. Some of the machines have been working, and the resumption of the plant will give a number of men employment.

WE GUARANTEE

A CIRCULATION FOR ALL THE NEWS. HARDWARE HARDWARE EXCLUSIVELY. OF NOT LESS THAN

ONE HUNDRED AND TWENTY THOUSAND

FOR

1896.

There is but one way, outside of the word of the publishers, to settle definitely the circulation of any newspaper, and that is to **publish the receipts from the post office** for the matter that is mailed. During 1896 we shall adopt this system, and will, each issue, publish the receipts for the preceding issue as obtained from the mailing department of the New York post office, and this will settle, once and for all, the truth of our assertions.

If it can be shown that we fall below 120,000 in the year we **will donate $1,000** to any charity named by the president of the New York Hardware Club.

BICYCLE TRADE RECORD.

Bicycle manufacturers and dealers, the country over, are requested to contribute to this page. News of new stores, changes, improvements, etc., will be gladly received, and promptly published.

New Companies, Stores, Etc.

Ansonia, Conn. — Sperry Mfg. Co. has leased its plant to the Wilcox & Howe Co. for the manufacture of bicycle forgings, and the factory will run night and day with a force of thirty men.

Big Rapids, Mich.—G. C. Lumsden will establish a factory for the manufacture of wooden bicycle rims.

Boston, Mass.—The Yost Mfg. Co., of Toledo, Ohio, have recently opened branch at No. 259 Columbus Avenue.

Boston, Mass.—The E. Howard Watch & Clock Co., at No. 383 Washington Street, have decided to commence the manufacture of bicycles, and are now perfecting their arrangements to that end. They will manufacture a high grade wheel, turning out 3500 for the next season. It is intended that all agents of this company throughout the country shall handle the bicycles also.

Bradford, Pa.—The Bradford Cycle Co. has been incorporated by S. R. Dresser, P. P. Kennedy, W. C. Kennedy, F. M. Webster, C. M. Brooks, C. L. McAllister and A. D. Burnes. Capital stock, $6000.

Brooklyn, N. Y.—The Lefebre Mfg. Co. has been incorporated by G. E. Roe, L. S. Matthewson and E. A. Lefebre, of Brooklyn, and George L. Robinson, of New York City, with a capital stock of $5000, to manufacture wire bicycle stands in Brooklyn.

Chicago, Ill.—The Cycle Pendulum Co. has been incorporated by Edward D. Anconra, James M. Kuh and Ludwig Zeisler. Capital stock, $50,000.

Chicago, Ill.—The King O'Hara Mfg. Co. has been incorporated by Philas King, Alexander P. O'Hara and Chas. E. Stanley, to manufacture bicycle supplies. Capital stock, $10,000.

Chicago, Ill.—The Diamond Pedal Co. has been incorporated by Patrick J. Regan, Abraham L. Funk and Geo. S. Parker, to manufacture bicycles. Capital stock, $5000.

Cleveland, Ohio.—White Sewing Machine Co. announce their intention of going into the manufacture of bicycles, building a high grade wheel to be known as the White.

East Orange, N. J.—Porter & Gilmour, incorporated, have obtained charter for manufacturing bicycles. The incorporators are Luther W. Porter, James N. Gilmour and Chas. D. Brisch. Capital stock, $35,000.

Frankfort, Ind.—R. P. Shanklin & Co., bicycles, have commenced business, having secured the agency for the Waverley.

Grand Rapids, Mich. — Vanderveer & Witman, bicycles, commenced business, having accepted the agency of the Fowler Cycle Mfg. Co.'s wheels.

Greenfield, Mass.—Chas. F. A. Eddy, W. L. Severance, B. B. Noyes, and others, are organizing a company with a capital of $10,000, to manufacture a new bicycle designed by Mr. Eddy.

Indianapolis, Ind.—The S. A. Haines Co. are preparing to open a store for the retailing of the Eclipse bicycles, manufactured by the Eclipse Cycle Co., Elmira, N. Y., for which wheel they have been appointed exclusive agents for the State of Indiana. They are now arranging to establish an agency in all the leading towns and cities in Indiana.

Montville, Conn.—The Lindstrum Cycle Co. has been organized with T. E. Robertson, president, and C. W. Comstock, secretary and treasurer, to manufacture bicycles. Capital stock, $30,000.

New Bedford, Mass.—Crown Bicycle Mfg. Co. is reported to be negotiating with business men at Tottenville, N. Y., with a view of building a bicycle factory in that place.

New London, Conn.—The Owens Mfg. Co. are setting up machinery in the factory building of the Oneco Mfg. Co. for the manufacture of bicycles.

New York, N. Y.—The Phillips Mfg. Co. is being organized at Nos. 307-309 West Broadway, to manufacture the Phillips Bicycle.

New York, N. Y.—The Non-Puncturable Pneumatic Tire Mfg. Co. has been incorporated by F. C. Boehm, G. S. Boehm and Max H. Boehm, all of New York. Capital stock, $1000.

Peoria, Ill. — The Henning Cycle Co. opened new store at No. 426 Main Street.

Philadelphia, Pa.—Sharpless & Watts, at No. 1522 Chestnut Street, have commenced the manufacture of bicycles, and intend to turn out 3000 wheels on the '96 market. They will manufacture a high grade hundred-dollar wheel, to be known as the Quaker City, also a trade wheel of ordinary grade. A special department of their business will be devoted to bicycle parts and sundries.

Philadelphia, Pa. — Penn Bicycle Co. has been incorporated by Ray M. Howard, Harry D. Lecato, Jno. A. Lecato, Josephine McCartney, Daniel L. Hill, Geo. Shattuck, Edwin C. Howard. Capital stock, $10,000.

Pittsburg, Pa.—The Wilson Mfg. Co., newly organized, with a capital stock of $250,000, with H. C. Wilson, of McKeesport, Pa., president; will erect factory corner Twenty-fourth and Carson Streets, and will manufacture Hardware and bicycle novelties, and will conduct a bicycle repair department.

Santa Cruz, Cal.—Hall Steck, of San Francisco, is organizing a company to manufacture bicycles.

Springfield, Minn.—A. G. Anderson, bicycles, Hardware, etc., is opening new store.

St. Joseph, Mo.—The Gun & Bicycle Co. is preparing to commence the manufacture of bicycles, making a specialty of a new combination ram's horn handle-bar. Sufficient orders are said to be booked to keep the factory busy during the winter months.

St. Louis, Mo.—The Knight Cycle Co. has been incorporated by A. A. Knight, who is credited with 293 shares; A. A. Hart, who has one share, and R. T. Stillwell, who also has one share, to buy and sell bicycles, tricycles and other vehicles. Capital stock, $30,000.

St. Paul, Minn.—The Griffin Wheel Co. is reported to be preparing to establish a bicycle factory in St. Paul, with a daily capacity of 200 wheels.

Syracuse, N. Y.—The Tourists Cycle Co. has been incorporated by Edward C. Stearns, Herbert E. Maslin and Harry White, of Syracuse, and Julian R. Tinkham and Ernest F. Walton, of New York City, to manufacture bicycles. Capital stock, $100,000.

Syracuse, N. Y.—The Empire Cycle Co. has been incorporated by Edward C. Stearns, Jacob Amos, Herbert E. Maslin, Wlibert L. Smith and Jno. C. Bowe, of Syracuse, to manufacture bicycles. Capital stock, $100,000.

Waltham, Mass. — American Waltham Mfg. Co. have commenced the erection of a factory, 30x200 feet, three stories high, for the manufacture of a high grade bicycle, to be known as the "Comet."

Changes and Removals.

Chicago, Ill.—Donnelly & Deward, manufacturers of the Double Diamond bicycle, reported sold out to the Cash Buyers' Union, No. 158 to 164 West Van Buren Street. The purchase only includes the bicycle business of this concern. The buyers will increase the output.

Cuba, N. Y.—F. Lown & Co., bicycles, reported sold out to Charles Gee.

Hackensack, N. J.—Bennett & Co., bicycles, have sold out to John Lozier.

Louisville, Ky. — Kentucky Cycle Co., Chas. H. Jenkins and Chas. Speed, have disposed of their interests to George W. Herbert, who has been connected with this concern for some time, and who will continue the business.

Northampton, Mass. — Hampshire Cycle Mfg. Co. have recently effected a reorganization, changing from a partnership to an incorporated company, with a capital stock of $25,000. This action was taken for the purpose of enlarging the company's factory from a capacity of 1500 bicycles to 2000 bicycles. The Nonaltuck and Katharina bicycles are manufactured.

Redwood, Cal.—Stafford & Johnson, bicycles, have dissolved copartnership, and have been succeeded by Johnson & Hughes.

Toledo, Ohio. — Dauntless Bicycle Co. moved into larger quarters, and are adding much new machinery. The company formerly employed sixty men, but expect to increase their force to 250.

New Goods and Improvements.

Highlandville, Mass.—Union Cycle Mfg. Co. have completed their four-story addition to their large factory, for the accommodation of 100 additional operatives; 5000 wheels are to be turned out in '96, against 2500 wheels manufactured last season.

Oregon, Wis.—The Badger Cycle Co. will increase their output of bicycles to 2000 wheels. The company contemplate still further extensions to their capacity. Their '96 model will be 1⅛-inch tubing throughout, except the head, which will be 1¼-inch.

Westfield, N. J. — Scrivin & Hand, bicycles, are completing an addition to their building, to be used as a bicycle repair department.

When you begin handling bicycles

One of the important things for you to do is to find the pneumatic tire which has the most friends. When you have found it, stick to that tire. It will be well for you to know that more than sixty-five per cent. of the total tire business is done by Morgan & Wright, Chicago. They have a guarantee which guarantees. They know how to take care of their customers. You have often seen their trade-mark—

MORGAN & WRIGHT TIRES ARE GOOD TIRES

The M. & W. quick-repair pamphlet is interestingly illustrated from life.

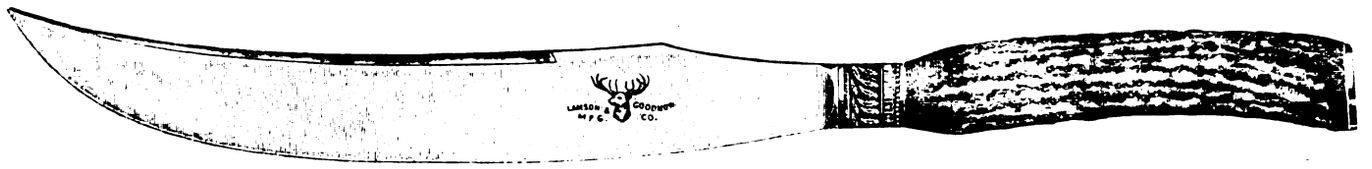
ONE REASON WHY

Our business has grown out of all proportion to any other manufacturer of

CUTLERY IN THE U. S.

Is that while our goods are unsurpassed in finish and general appearance our special aim has been to adapt them to the purpose for which they are to be used.



In the matter of Carvers, your customer wants a Knife to cut with as well as to look at. All our Carver blades are made from carefully tested Butcher Knife Steel. They take and hold a fine cutting edge.

We also make Table Knives, Butcher Knives, Shoe Knives in great variety. All fully Warranted.

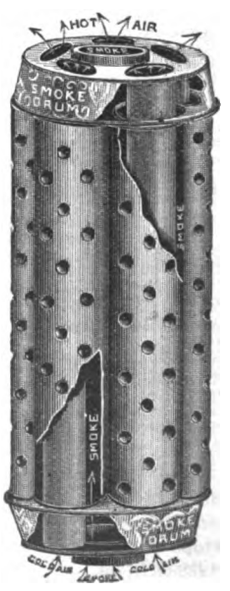
BOSTON TAPE MFG. CO., 187 Pearl St., BOSTON.

Manufrs. of Useful Adv. Mediums.

Perhaps You Don't Know All About It!



THE NEW ERA RADIATOR.—It is a scientific combination of drums and flues compactly arranged to take the place of a section of stove pipe. It intercepts the intense heat which always passes up the centre of a pipe or chimney. Without injury to the draught, the current of hot air is caused to flow naturally and uniformly over an immense radiating surface, and a large proportion of the heat exhausted and thrown out into the room. The cold air from the floor also passes through the inner tubes and is heated. This quickly equalizes the temperature of the room, making a pleasant and healthy circulation. It will actually save from 700 to 1,000 lbs. of coal out of every ton. Forcing the stove, as is usually done, becomes unnecessary, the wear and tear is less and its life is so much longer. It does not catch dirt or soot and is as easily cleaned or repaired as a stove pipe. Does not leak gas or obstruct the draught, but saves the heat for your comfort. Thousands who are using them will attest this truth.

Prices are low this year. Address

148 Lake Street, CHICAGO.
Factories: GEORGETOWN, CONN. / CHICAGO, ILL.
ESTABLISHED 1818.

THE OLDEST AND LEADING MANUFACTURERS OF GALVANIZED WIRE GOODS IN AMERICA.

"Pennsylvania" Fruit Picker

This Cut almost speaks for itself—the device being so much like the human hand, shows at once the utility of the article.

AS A FRUIT PICKER IT HAS NO SUPERIOR.

PATENTED.

It is made of Heavy Galvanized Wire, and Easily Adjusted to a Pole. It has been sold for several years, and the demand (as it is becoming known) is steadily increasing. The difficulty of detaching fruit and securing it unbruised is apparent to everyone so engaged. This overcomes the difficulty, and saves the finest fruit which commands the highest prices.

THE LOW PRICE AT WHICH IT IS SOLD

Brings it within the reach of those who have but little fruit to gather as well as those who have large quantities. **Price, per doz., $6.00. Liberal discount to dealers.** It will gather Apples, Peaches, Pears, &c.

—MANUFACTURED BY—

Pennsylvania Wire Works,
EDWARD DARBY & SONS,

233 & 235 ARCH STREET, PHILADELPHIA, PA.

ORANGE SPORTING POWDER, MANUFACTURED BY LAFLIN & RAND POWDER CO.

ORANGE RIFLE EXTRA, ORANGE SPECIAL, ORANGE DUCKING, ORANGE LIGHTNING.

The attention of TRAP AND FIELD SHOOTERS, RIFLEMEN AND DEALERS IN GUNPOWDER, is called to the new ORANGE SPORTING POWDER, patented April 17th, 1888, and branded ORANGE RIFLE EXTRA.

This Powder is quick and strong, and burns with such perfect combustion that the only residum left in the barrel after shooting is a dark oily substance easily removed While this Powder is not exactly SMOKELESS, it gives only a light bluish smoke, which is almost instantly dissipated, and interferes but little with the shooting of the second barrel, taking the place of the so-called smokeless powders in this respect.

This brand of powder sells at the same price as any other brand of Rifle Powder and is superior to any made. No person who shoots can afford not to give it a trial, as after once trying it he will never use any other Powder when he can obtain the ORANGE EXTRA. Weight and quality guaranteed.

MILITARY, MINING AND BLASTING POWDER.

LAFLIN & RAND POWDER CO., - **99 Cedar Street, New York City.**

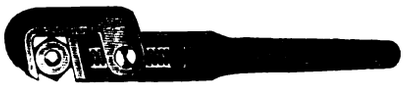
Y., whose business in these lines we have acquired by purchase.

☞We are the SOLE Manufacturers.

THE WRIGHTSVILLE HARDWARE CO., - - WRIGHTSVILLE, PA.

HALL'S IMPROVED PIPE WRENCH.

DO YOU SAY that this wrench will crush or cut the pipe? IT WILL NOT if you know how to use it. The principal cause of Pipe Wrenches crushing or cutting the pipe is because the GRIPPING POINTS ARE DULL. You can sharpen THIS WRENCH IN A FEW MINUTES on a



grindstone or emery wheel WITHOUT TAKING IT APART.

THIS WRENCH if kept sharp will grip high on the pipe, and you can screw a pipe so tight that it will open a malleable fitting, and strip the thread, WITHOUT CRUSHING OR CUTTING THE PIPE.

It is impossible to LOCK OR WEDGE THIS WRENCH on the pipe.

It will COST LESS FOR REPAIRS than any other Pipe Wrench.

IT IS THE BEST SCREW WRENCH, as it is stronger than any other, and by pulling the reverse way it will grip a nut or fitting and WILL NOT SLIP.

It is DROP-FORGED from TOOL STEEL.

Sam'l Hall's Son,
229 West 10th St., New York.

SURE ...TO PAN OUT.

The Excelsior Roasting and Baking Pan makes money for every dealer who handles it. To show it is to sell it, because its merits speak for themselves.

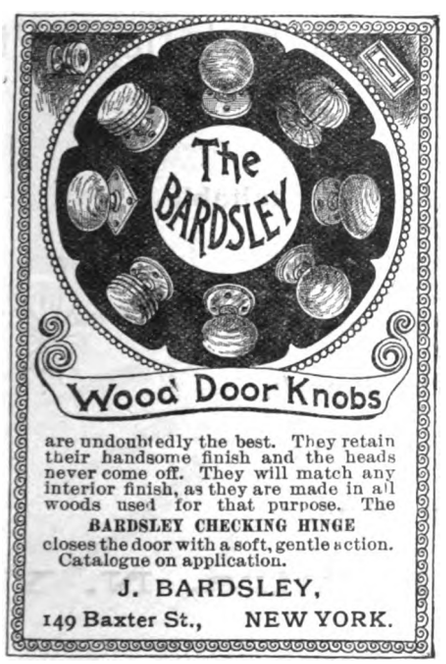
IT TAKES A PULL



to separate the plies of our rubber belting. A yoke of oxen can do it, but hard service won't, so strong is the friction. Our belting is uniform in width and thickness, consequently more of its surface comes in contact with a pulley. That means

NO WASTE OF POWER.

Rubber belting is never injured by water, hence it is best for out-door use, for wet localities, and for mills where the atmosphere is surcharged with moisture or steam, as in paper mills, tanneries, etc. Buy the durable kind, branded 1846-Para, Double Diamond or Carbon, made for 50 years by the

NEW YORK BELTING & PACKING CO. LTD

Pioneers and Leaders, **15 Park Row, New York.**

are undoubtedly the best. They retain their handsome finish and the heads never come off. They will match any interior finish, as they are made in all woods used for that purpose. The

C. W. Dunlap & Co., 88 Chambers St, New York.

The Compressed Air Washer at the Head.

It is Light and Portable. Lasts a Lifetime.
No Friction. No Wear on the Clothes.

Patented April 4, 1882. No. 255,947.

We guarantee the Washer to be a great saver in time, labor and with no wear or injury to the fabric. The use of the machine is easily learned—a child ten years old can learn to do the washing. It is a rational system of Washing and a Great Labor and Clothes Saver.

Retail Price, $2.50. Send for Circulars and Prices

Manufactured only by E. M. HEATHMAN & CO., HAMILTON, O. U. S. A.

ROBERT H. INGERSOLL & BRO.,
SOLE MANUFACTURERS,
65 Cortlandt Street, New York.

THE BERRY CLOTHES SPRINKLER
Patented.

Fills automatically and will enable you to iron your clothes immediately after sprinkling, if you so desire.
For starched clothes it is unsurpassed.
It is an excellent sprinkler for house plants.
It is capital for laying the dust while you are sweeping.
Long used carpets can be made much brighter by putting a few drops of ammonia in water and sprinkling before sweeping. Retails for 25 cents.
Libe al discount to the trade. Send for price.

Toledo Wheelbarrow Works. Toledo. O.

The AMERICAN WICK is made on scientific principles. The gum inherent in the natural cotton is taken out, and no expense is spared to produce a wick that will give THE GREATEST ILLUMINATION.

THE
AMERICAN WICK
Made by the
WICK DEPARTMENT
Of the STANDARD OIL CO. of NEW YORK.

Oil drawn up through the AMERICAN WICK burns with a large, clear, white light and the flame does not drop off in size as it does when a poor wick is used. When the cotton is clogged with its natural dust and gum the full illuminating power of the oil is not obtained and the complaint is heard that the light DROPS.

Established, 1882. Capacity, 100,000 Tons.

Do You Desire

an article that every family would buy if they simply had their attention called to its merits? If you do, put in a stock of P & A's Banner Oil Stoves. See Cut.

No. 971. Heater Complete. Height, 27 inches.

Banner Oil Heater

SIMPLE, NOVEL and PRACTICAL.

Requires less care than the ordinary Lamp.

Will burn 10 to 15 hours and heat comfortably a room 15 to 20 feet square.

NO SMOKE! NO ODOR! PERFECT COMBUSTION.

POINTS:

The Oil Fount is brass, handsomely embossed and highly nickeled. It holds one gallon of oil. As each fount is tested under steam pressure before leaving factory, there is no danger of leaking.

No Chimney. The drum of the **BANNER** in its construction acts as a chimney, saving the expense incident to the renewal of glass chimneys of other makes.

The Fount Frame is artistically made of wrought iron, making a solid base for the stove.

The Burner is the best made, and ONLY ONE with feeder wick, allowing all the oil to be consumed.

The Indicator shows at all times how much oil there is in fount.

The Flame is regulated with our ratchet wick movement, which allows the wick to be raised or lowered with nicety and exactness.

Lighting. It is not necessary to remove any part of the stove to light it. The sliding door in the drum is made for this purpose.

Draft. The round openings in the drum create great suction of cold air in addition to the regular draft. Double the radiating force of the ordinary stove is thus secured.

Get one for your Bed, Bath or Smoking Room, Library, Nursery, Office or Conservatory.

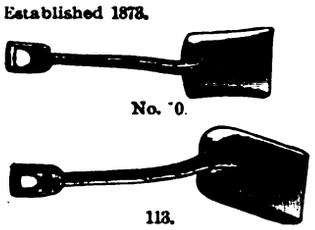
OHIO KNOCK-DOWN STOVE PIPE.

THE Ohio Stove Pipe is the only practicable, durable Smoke Proof Knock-Down Stove Pipe made that needs no directions for putting it together. The Ohio Stove Pipe's peculiar construction enables any person to easily put it together or take it apart. A number of the Ohio Stove Pipe Joints put together will make a continuous line (46 ft. long if desired) of perfectly firm, smoke-tight pipe that will not collapse.

The Ohio Stove Pipe is always shipped in crates of 25 joints of the following sizse:



4 in....per crate. 5 in....per crate. 6 in....per crate. 7 in....per crate.
4½ in.... " 5½ in.... " 6½ in ... "

Ask your jobber for this stove pipe; if he does not keep the Ohio, write us.

The Threatened Invasion from Japan.

A somewhat sensational story comes from San Francisco, that suggests more than it really says. It is to the effect that Japan has at last fully recognized her power to produce manufactured goods at a price that cannot be touched by the western nations, and that she has decided upon an industrial invasion of America that will, if carried out, drive our home manufacturers out of the market.

We would not advise anyone to close down his factories upon the strength of this relation of alleged facts. There will be a great many goods made in America not alone for home consumption, but also for export, not only this, but next, and a great many years to come. The alarmists who sent forth the startling story of Asiatic purposes, overshot the mark somewhat by going too closely into details.

The statement was made that "this new and aggressive invasion began a few weeks ago when the agent of a powerful manufacturing and commission house, whose headquarters are in Kobe and Hiogo, arrived in this city (San Francisco) and offered such inducements to merchants that they were compelled to place large orders with the new commercial giant. A canvass of the San Francisco mercantile trade reveals the fact that an unprecedented cut in almost every line of staple goods has been made by the Oriental bidder. Buttons by the great gross are delivered, duty free, at a fraction less than the actual cost per gross of the American article. Bicycles, guaranteed equal to the best high grade, are listed at $12. Japanese matches are to be laid down at a price which is destined to close every match factory in the United States. Sashes, doors, blinds and all kinds of wooden ware can be delivered, duty paid, at 30 to 50 per cent. less than the wholesale prices of local manufacturers. After placing huge orders in this city the agent left here for the East, where agencies will be established in New York, Chicago, St. Louis and elsewhere for the purpose of underselling American and European manufacturers as fast as possible."

If the button story and the match story correspond to that concerning bicycles, the statement must be taken, all the way through, with a large grain of allowance. A high grade bicycle for twelve dollars, either in Japan or elsewhere, is an impossibility just at present, no matter what may lie in the future. Col. Albert A. Pope, who is certainly a high authority, has pointed out the pertinent fact that the materials for a high grade wheel cost more than twelve dollars. It is true, he said, that bicycles have been manufactured in Japan, but they are nothing more than children's wheels, which would cost probably thirty dollars to the purchaser here, and can be manufactured to sell for that price in this country. The Japanese manufacturers would have to use American machinery to get out high grade wheels, and, while of course they could duplicate the machinery, it would be very crude and imperfect. He clinches his argument by the statement that his company are now selling Columbias in Japan at $125 each, which could hardly be done if Japan wheels could be made and sold at the price named. It is further suggested, that before coming to America and paying a duty upon her goods, Japan would first flood the markets of such great European countries as do not levy a tax upon foreign goods.

The real question of interest to America, however, goes a little deeper than the price of wheels in 1895. That Japan can take American ideas and American machinery, and make goods at a less cost than they can be made here, is beyond dispute. That she can bring them here and undersell our home manufacturers, must also be conceded.

That she will be permitted to do so, is another question.

We do not believe that America stands ready to commit suicide for the benefit of Japan or China, or any

Digitized by Google

other nation upon the face of the globe. Before this invasion has run a very great length, something with authority behind it will be heard from the American people.

Self-protection is one of the fundamental laws that keep men and nations upon the face of the earth, and a great people that would sit down and see its industries wiped out of existence, would deserve no better fate. We do not believe that America is to be included in that category.

Pittsburg Convention Echoes.

The Association unanimously voted its secretary-treasurer, T. James Fernley, an additional $500 compensation for last year's services, which he positively declined to receive, with the statement that what he had done was for the benefit of trade in general, and not for his personal gain.

It was not generally known that the little padlocks used to lock the menu cards were made of 18-carat gold, costing about $7 each. Had some member of the committee announced this fact at the banquet, no doubt many of the guests would have been more careful with the costly little trifles.

The little shovels distributed by Hussey, Binns & Co. were quite a novelty. Everybody had a scoop.

It was estimated that the gathering at the banquet represented anywhere from $150,000,000 to $500,000,000 capital.

Mr. Fernley's endeavors to make the colored infant give musical accompaniment to the chorus of "The Alabama Coon," were fruitless, though he pinched the pickaninny vigorously.

The next meeting will be in the city of Brotherly Love, although Nashville put up a stiff fight for it.

The officers elected for the ensuing year were:

President, W. W. Supplee, Philadelphia.

First Vice-President, H. H. Bishop, Cleveland.

Second Vice-President, John Alling, Chicago.

The Executive Committee consists of S. A. Bigelow, Boston; F. F. Strong, St. Paul; Brace Hayden, San Francisco and New York; Theodore S. Buhl, Detroit; Col. B. S. Eshelman, New Orleans; C. W. Tillinghast, Troy, N. Y.

Still another souvenir was that of the Oliver Wire Co., a combination price list, calendar and blank book bound in Russia leather, the card receptacle being printed with the name of the fortunate recipient and each containing a novelty in the form of a wire screw nail pencil.

Another firm gave a mattock of silver with a cigar-cutter combined, and a third distributed a memorandum book in covers of seal.

The numerous committees were most efficient in looking after the welfare and enjoyment of the delegates, and they fairly bubbled over with information.

Hulbert Bros. & Co. Ready for '96.

The new alterations and additions to the factory of Hulbert Bros. & Co., in Norwich, although completed some time ago on all buildings which were to be used in the construction of their Majestic Bicycle, are not yet quite complete for the warehouse and shipping department which Hulbert Bros. intend to occupy shortly, as much for the convenience of their customers, in facilitating the prompt delivery of all repairs and parts, which being made down in Norwich will be shipped direct from the factory to the customers. Of course, all the selling, correspondence and details of every name and nature will be conducted in New York, as heretofore.

Hulbert Bros. make this move, as they think that in 1896 particularly, all bicycle dealers will want to get their goods promptly when wanted, and they intend not to let anything stand in the way of their making immediate shipments, nor of their being able to give the most prompt attention to every detail pertaining to repairs and parts. This can only be done by having a storage and shipping department in conjunction with the factory.

While they have not been pushing their samples out as fast or early as some of their agents seem to desire (although they will be out in a few days), they feel that the move that they are making will be appreciated by their agents later in the season for the reason that they are working every single avenue and every mechanic in making up stock, and a quite considerable proportion of the '96 mount is already finished for the entire season, so that Majestics when wanted will be ready to ship in quantities and with promptness to suit all.

It is a noticeable fact that special features in the construction of many of the '96 mounts are scarce, but on Majestics they will be plenty, and all good ones at that. One of the best features of the '96 Majestic is the fact that they will all be fitted with the Mesinger saddle.

As to Bicycle Guarantees.

At a recent meeting of the Board of Directors of the National Board of Trade of Cycle Manufacturers, held in New York, action was taken in regard to the guarantee question. The period heretofore has been one year. After a long discussion, the following resolution was introduced and adopted:

Resolved, That the following form of guarantee be recommended to the members of the Board of Trade as the standard Board of Trade guarantee: "The manufacturer of this bicycle guarantees to replace or repair any defect in this bicycle for a period not exceeding six months from date of sale to original purchaser, provided that satisfactory proof of such sale is given and that such defect is not the result of misuse or neglect, and that the defective part be delivered to such manufacturer for inspection."

A large number of the members of the board have expressed their willingness to incorporate this guarantee in their 1896 catalogues.

Those of the directors present at the meeting were: A. G. Spalding, president of the board; George Pope of the Pope Mfg. Co.; Joseph McKee of McKee & Harrington; C. W. Dickerson of the Sterling Cycle Mfg. Co., Chicago; C. F. Smith of the Indiana Bicycle Co.; E. C. Stearns of E. C. Stearns & Co. A. Kennedy-Child, secretary; Ernest R. Franks, the assistant secretary, and Walter Burnham were also in attendance.

Doing a Big Wire Business.

C. Hanika & Sons, Muncie, Ind., have purchased the Muncie Architectural Iron Works, and have made many improvements, adding new machinery and patterns for manufacturing iron and wire fencing. They have just issued catalogue A, showing a large variety of wire fencing, also a special fence catalogue No. 13 of the Hanika wrought iron fence. They are fitting up a special department for wire office railways and grill work, nickel and electroplating. Any one needing anything in their line will do well to correspond with them and get their catalogues. Mr. C. Hanika has had twenty-seven years experience in the iron fence business, which enables him to offer special advantages to the trade. They have special advantages for supplying all demands, especially the Southern trade. Their goods have been used in every large city in the South, and stand as monuments to their high quality. See their advertisement in this issue.

Bittenbender & Co., Scranton, Pa., will continue their bicycle department on a large scale for 1896. They have placed some large contracts for leading cycles, and control eleven counties in their section for the Gold Crank Falcon.

MAKING ADVERTISING PAY.

BY NATH'L C. FOWLER, JR., DOCTOR OF PUBLICITY.

Advertising to pay must be made to pay.

The good of all good is in so handling the good that the good of it does good.

Poor advertising pays poorly—good advertising pays well.

Good goods and poor advertising may be as profitless as bad goods and good advertising.

Unless the quality of the goods, and the quality of the advertising, harmonize, there is no profit in publicity, except that transient profit that no decent man cares about.

The conventional advertisement has a value, although it has looked backward over a quarter of a century.

The selling value of anything is partly in the appearance of it.

Intrinsic value, covered with a bushel basket, is no more salable, and perhaps not so salable, as less value well presented.

A ham sandwich, with a wide, thick table-cloth and napkin as big as a towel, with a waiter of immaculate blackness, and a well-set table, is more appetizing than terrapin and game served in a horse trough.

The diamond is not more brilliant than coal before it is polished.

Make the goods look as well as they are, provided they are as well as they look.

Make the advertisement look as well as the goods.

The advertisement which reads—

JOHN SMITH,
Manufacturer of
Hardware,

may bring Mr. Smith some business, but it will not bring him the business that is sure to come from an advertisement which advertises what Mr. Smith sells more prominently than Mr. Smith himself.

Mr. Smith is not for sale—that which he makes is for sale.

The buyer cares nothing about Mr. Smith beyond Mr. Smith's reliability and character.

He cares everything about the quality of what Mr. Smith makes.

I do not depreciate the value of keeping Mr. Smith's name before the public, but I do not believe in advertising Mr. Smith to the prejudice of what Mr. Smith makes.

Three-quarters of the advertisement, and the largest type, should be used in announcing the articles manufactured. Too big type cannot be used—the bigger the better.

Better hit the pocket-book of one man, than the feet of a dozen.

One word inside of a man is worth one hundred outside of him.

No matter what you sell, advertise it, with your name and address as a matter of necessity, but don't place your name at the top of the advertisement in the largest type, followed by a conglomeration of what you make, so mixed up, and so insignificant, that one can't separate the wheat from the chaff.

If you manufacture a dozen articles, don't conspicuously speak of more than one of them at a time, unless you have separate advertisements for each.

There is no objection to advertising some one article prominently, and in small type following, speak of the other lines carried.

Let the advertisement have the advantage of always profitable oneness.

Copyright, 1895, by Nath'l C. Fowler, Jr.

Let it appeal to the buyer on some one particular thing, that thing to be changed to another in the next issue of the paper, if you make other things.

If you manufacture a dozen articles, advertise one prominently, with the others very much less prominently; then the next time advertise another prominently, and the other less prominently, and so on.

Don't say much in your advertisement.

It is not the business of the advertisement to sell goods. It is to assist your salesmen and your catalogue in selling.

It is the business of the advertisement to create correspondence, to separate the probable from the possible customers, to bring into your office letters which indicate that certain people desire certain goods, and it is then your business, and the business of your employees, to sell them.

Trade paper advertising would be worth double what it is to the advertiser, if the advertiser made his advertisements specify something in particular, not everything in general.

Make one point at a time, and only one.

Advertise prominently the thing for sale, not the seller of it.

Councillor Ben Lovell.

"A prophet is without honor, except in his own country," is a trite old saying and one that might have been applicable to biblical times, but it can hardly be claimed that it applies to our times and conditions, as is vividly illustrated in the social, business and political career of Col. Benj. S. Lovell, of Weymouth, who has been recently elected a member of Governor Greenhalge's official family, styled the Council, from the Second District, by a plurality of over 10,000 votes.

Colonel Lovell has held many offices of trust and honor, both political and social, and has attained to an elevated, honorable and enviable position in the business world. And the continued and loyal support with which his fellow citizens delight to honor him is but a merited tribute to his sterling worth and character as a citizen, a merchant and a friend and neighbor. It is seldom that a man of mark enjoys the distinction of being held in such high esteem, as well by his business rivals and political opponents as in the circle of his own friends and political supporters. And it is perfectly proper to add here that this loyalty of friendship is not due to the glamour or glitter of wealth, which draw around many nabobs a fawning retinue of cringing servitors and flatterers, but is due to the sterling qualities of head and heart possessed by that prince of good fellows, Col. Benj. S. Lovell. With charity for all and malice toward none, Colonel Lovell has endeared himself to thousands of his fellow veterans of the war and the dependent widows and orphans of those who have been mustered into that grander army beyond. Colonel Lovell comes from vigorous Cape Cod stock from the men of bone and sinew, combined with brains and good sound common sense that have made their mark in whatever walk in life they have chosen to tread.—*Quincy (Mass.) Ledger.*

T. F. Campbell, who has been very successful in the Hardware business in New Brighton, Pa., has engaged with the American Pump Co., Toledo, Ohio, from the beginning of 1896, and will look after their interests in Pennsylvania.

The Richardson-Boynton Stove Co., Dover, Del., have awarded the contract for the erection of buildings to cost $95,000.

The Colonial Bicycle.

John McClave & Sons, Nos. 602-4-6 West Twenty-second Street, New York, have commenced the manufacture of the "Colonial" Bicycle, and have made their announcement for the season. In the course thereof they say: "In the line of that material progress which is constantly going on in this world, the undersigned, in presenting to the public the Colonial Bicycle, feel that they are justified in saying that they have succeeded, after a long time in labor and a large expenditure of money, in so constructing the Colonial as to make it not only fully equal to anything in that line that has ever been placed before the public by the very best manufacturers, but feel justified in saying (and the most careful experts in the cycle line concur in the statement) that it is superior to any bicycle that has ever been made, in its design, finish and durability. The manufacturers made a special study in ascertaining what, if any, weak points could be discovered in bicycles heretofore made, and after ascertaining the exact location of such weakness, set to work to so strengthen and perfect such parts as to give to their bicycle a durability superior to anything which has yet been produced. In brazing the various parts together wherever the weakness on any of the best machines has ever been discovered, they have, in addition to the brazing, placed a steel jacket, which, while it adds to the finish, so strengthens the part as to make it impossible for any breakage to occur. Experience has further taught riders that dust or gravel, to a greater or less extent, succeeded in working its way into the bearings and destroyed its proper workings. To obviate that difficulty we have made our cones or coverings not only of the very best steel, but have also made them absolutely *dust-proof*, so that there is no possible danger of any interference with the workings of the bearings from the very annoying difficulties in that direction which bicycle riders heretofore have been subjected to. We have also strengthened the forks by placing and brazing on the inside a steel protection, so as to make them capable of sustaining a pressure at least five times greater than has ever yet been known. Buyers of bicycles will best realize the importance of purchasing the handsomest and the most durable that can be made, when they bear in mind that the money they expend in purchasing should not be looked upon in the light of an expenditure for temporary pleasure, for the bicycle is a permanent fixture; it has passed beyond any limits of mere pleasure or exercise. It has forced itself on the attention of the people generally throughout the entire world. Aristocracy in England and France, as well as in this country, has recognized its worth. The price of these machines is $100. And with each the usual guarantee."

Our Widening Export Trade.

A notable feature of our export trade in recent months has been the widening of the markets for American manufactures. Thus this fall $100,000 worth of American cotton fabrics have been sent to Arabia, while Roumania, Turkey and Spain have placed trial orders for Hardware. Russia has bought very large lines of American manufactured rubber. Brazil has placed large orders for chemicals of American manufacture. France bought American bicycles to the value of $12,000 this autumn, while the United States of Colombia purchased $8000 worth of American "wheels." South and Central American countries have bought large quantities of American cutlery. The Argentine Republic took $60,000 worth of binding twine. Electrical material is in demand in Brazil, which between August 1st and October 1st placed orders for more than $30,000 worth of it in the United States. Australia favors American carriages, and has bought many this autumn. South Africa is a very large purchaser of American manufactures, notably of agricultural implements, machinery, trunks and bags. There has been a large increase in the exportation of agricultural implements this fall, Argentina taking them to the value of $270,000, while Uruguay's purchases footed up $52,000. England is the largest purchaser of our manufactured goods, especially of those that may be called "Yankee inventions." The Australian colonies have recently expended $60,000 for American paper and paper goods. The exports above mentioned, it should be said, are those from the port of New York alone, and other ports will considerably swell the total of our shipments to foreign nations.—*Boston Transcript.*

More Pointed Commendations

Some more commendations of the Bicycle Step Ladder, received by the Bicycle Step Ladder Co., Chicago: A. A. Cargill, Mason City, Ill.: "The ladder works to perfection, and I find it a great convenience and am well pleased with the same." F. Diehl, boots and shoes, Woodsfield, Ohio: "Ladder has come in and I had it put up immediately. I am well pleased with it, and in fact it is just what I wanted, and would not hesitate a moment to recommend it to anyone." H. C. Miller, department store, Staples, Minn.: "The Ladder is immense." W. A. McNamara, furnishing goods and shoes, Eureka, Cal.: "Enclosed please find exchange for your bill of ladders. I consider them a good investment. Did not know what I had missed until they were placed and in use." A party, in remitting $104.70 for an outfit of ladders, writes: "When ordering I thought the price a little high, but I now have the ladders in use and would not do without them for four times what they cost me."

The Derby Razor Co.

The Derby Razor Co., Derby, Conn., and No. 64 Reade Street, New York, announce that having purchased the entire plant of the Eastman and Herbrand Razor Co., Fremont, Ohio, they will continue and extend the manufacture of "a full and complete line of fine razors of all kinds from a very superior grade of steel, and by a new and improved method of tempering." They add: "We employ none but the best skilled workmen, and have men of years' practical experience at the head of each department. All razors are thoroughly inspected, and no imperfect razor is allowed to pass the inspector. We make a special fine line of razors for the best barber trade. Every razor bearing our brand is fully warranted. Our motto is 'Not How Cheap, but How Good a Razor We Can Make.' We are also owners and manufacturers of the Derby Safety Razor, which has already established a high reputation for superior quality and simplicity. We also manufacture a large line of Razor Strops, many new and attractive patterns." Prices and full details will be sent to all who desire.

Divine Bros.' Removal.

The Divine Bros., who have so successfully established the manufacture of a high grade of Buffing Wheels, at Chadwicks, N. Y., have decided upon an advance step, by the removal of their works to Utica, N. Y. This change is made necessary by the rapid increase in their business, the new building giving them over 7000 square feet of floor room, and increasing their capacity three times. They will make a special drive on spirally sewed buff, and are adding woolen and cotton flannel goods to their line. The quality of their goods has brought them more business than they could take care of, but their new building will give them plenty of room to take care of what comes.

One-half ounce of camphor dissolved in one pound of melted lard, with as much black lead mixed in, as will give it an iron color, makes an anti-rust preparation for all kinds of tools.

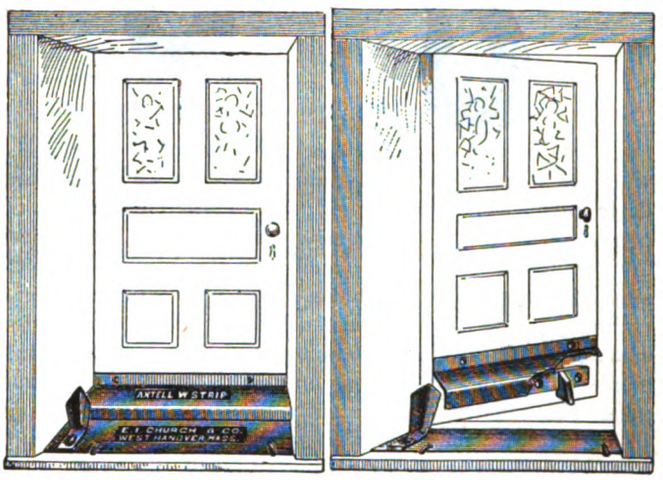
The Good Work of One Club.

The Implement, Vehicle & Hardware Dealers' Club of Kansas City has set a good example to men in other lines of business in giving to the public some accurate data relative to the amount of business done by its members. With the exception of the bank clearings, the very complete record of live stock business kept by Secretary Richardson of the Stock Yards company and the reports of grain receipts and shipments, there are no authentic records of the trade of Kansas City. The amount of the city's wholesale trade in various lines has always been a matter of guessing, and for that reason the annual reviews printed by the newspapers are of little or no value to anyone. The Implement, Vehicle & Hardware Dealers' Club has adopted the plan of obtaining from each member an accurate statement of the amount of the year's business done by his house, the number of men and the amount of capital employed, and the wages paid. These individual reports cannot be obtained except upon the agreement that they shall be used solely to make up the aggregate sums, and shall then be destroyed. Men are rightly jealous of their business records, and no one wants to spread before the public eye the details of his business affairs. But the plan adopted by the implement men removes all danger of these figures being used to hurt the business of any of those who furnish them.

The records of the past year, as summarized by President Stowe at the banquet of the club last night, show that the amount of business done in these allied lines this year is almost sixteen million dollars. The figures are somewhat below the guesses heretofore made, which have ranged from fifteen millions to twenty millions, but as the past year has been one of poor crops in the Southwest, and the coming year promises to be one of prosperity on the farms, it is probable that the record for 1896 will be in the neighborhood of twenty millions.—*Kansas City (Mo.) Star.*

M. & W. on Wheels.



The firm of Morgan & Wright, of Chicago, manufacturers of the quick-repair tire for bicycles, has quite a unique method of introducing its goods to the bicycle trade. Eleven of its representatives were in Cleveland yesterday in a private car, specially equipped for the purpose of visiting thirty-seven of the principal cities of the country in thirty-two days. An invitation was extended, through the newspapers of the city, to the bicycle trade and the riding fraternity, ladies as well as gentlemen. It was responded to by a very large attendance. The ladies were presented with a very handsome souvenir and flowers, and the gentlemen were regaled with cigars. The car left for Buffalo at midnight.—*Cleveland World.*

Death of Milton Rogers.

After an honorable and successful business career of over forty-five years, Milton Rogers, founder of the house of Milton Rogers & Sons, died at his home in Omaha, Neb., November 12th, at the age of seventy-three. This announcement will be received with deep sorrow by his many friends and customers, with many of whom he did business for a generation. In the year 1850 he, with other pioneers, located in the village of Council Bluffs, but as the succeeding years passed, it became evident that Omaha had a brighter future in store, and, in 1855, Milton Rogers established in that city, near Tenth and Farnam Streets, the first stove and tinware store in the Territory of Nebraska. Four years later he purchased the site where their store now stands, and erected a frame building thereon, the business having shown steady growth from the first. In 1868, one year after Nebraska was admitted to the sisterhood of States, the brick store building, now occupied by them, was completed. Upon this sure and lasting foundation the lamented head of the house builded a business that for nearly half a century has kept pace with the growth of the city and State. The name of Milton Rogers has long been a synonym of honor and business integrity, and his sons, Thos. J. Rogers and Warren M. Rogers, who succeed to the business, will hereafter conduct it after the general plan, and with the same steadfast purpose, which so distinctly characterized the life work of the founder.

Axtell Metallic Weather Strips.

E. I. Church & Co., West Hanover, Mass., are successfully manufacturing and marketing the Axtell Metallic Weather Strip, the purpose and application of which are shown in the accompanying illustrations. They state "that they have manufactured this strip for five years, and, after testing it under every condition in all parts of the country, we warrant it to combine every excellent point needed for a perfect strip." They are described by the makers as follows: "Axtells are simply two strips of steel 36 inches long, 1½ inches wide, and easily cut with file or cold chisel to fit narrower doors. They are quickly put on, only two parts, and do not get out of order. Common style being finely

lacquered is an ornament to any door, and is furnished in extra lengths to 48 inches. We also furnish them in brass or white enamel to order, in any length to 42 inches. Our claims of superiority: The Axtell is wholly steel and will not warp or split. Has no wood or springs to break. No rubber to harden and pull out. Does not spring the door, but keeps it straight and true. Not affected by ice, cannot be frozen down, or pulled apart. It takes the lead because so easily applied and always in perfect order. Its low price brings it within the reach of all." They furnish working models, 10x14 inches, free to all customers, and will be pleased to send prices, testimonials, directions, etc., upon application.

Death of Mrs. J. E. Sleight.

J. E. Sleight, the veteran Hardware salesman, and member of the firm of Church & Sleight, No. 109 Fulton Street, New York, was called home suddenly from Springfield some days since, by the severe illness of his wife. He reached his residence, No. 440 Classon Avenue, Brooklyn, in time, but soon after his arrival she peacefully passed away. Her death was the result of a paralytic stroke. For thirty-eight years Mr. and Mrs. Sleight traveled the road of happiness together, and in his great loss he will receive the sincere sympathy of thousands of friends who knew them both, for Mrs. Sleight often accompanied her husband upon his travels, and was loved and respected by all who knew her.

Brooms were used in Egypt 2000 years B. C.

The Cleveland Blocks.

The Cleveland Block Co., leading manufacturers of Tackle Blocks, located at Cleveland, Ohio, have recently effected improvements in their regular lines of goods, whereby the use of open hearth steel is increased, and the blocks rendered at once stronger and lighter. Assuming

that the use of a metal block to replace those made of wood is a permanent advance, this company have bent their entire energies, backed by abundant capital, to the construction of the best metal block which the best materials will form. Their machinery is new and adapted to the single purpose outlined above. The points of superiority claimed by this concern consist, briefly, "in the use of steel straps, hooks, pins and rivets, together with malleable iron shells, made upon the most approved mechanical principles. The construction is readily shown in the illustrations, by an examination of which it will be seen that the strength of the block does not depend upon that of the shell, which is merely a protection to the working parts of the block,

the steel straps extending past the steel pins. The sheaves are the only parts to wear, and can be replaced by means of spring cotters as readily as in the old fashioned wooden blocks." The same company make Gin Blocks, and a large variety of blocks for other purposes.

Crawford Distributing Agents.

The Crawford Mfg. Co., Hagerstown, Md., and Nos. 70 and 72 Reade Street, New York, announce the following, as distributing agents for their well-known Crawford Bicycles:

Julius Andrae & Sons Co., No. 225 West Water Street, Milwaukee, Wis., for Wisconsin, Iowa, Illinois and a small portion of the Northern end of Indiana.

McIntosh-Huntington Co., Cleveland, Ohio. Ohio, Indiana, West Virginia Western Pennsylvania and Western New York.

Morley Bros., Saginaw, Mich. Michigan and Canada.

Farwell, Ozmun, Kirk & Co., St. Paul, Minn., Northwestern Agents. Minnesota, North and South Dakota, Montana, Idaho, Washington and Oregon.

Bigelow & Dowse Co., No. 229 Franklin Street, Boston, Mass. New England.

Wier & Wilson, No. 14 West German Street, Baltimore, Md. Maryland, Virginia, West Virginia, North and South Carolina, Georgia, Florida, Alabama, Mississippi, Louisiana, Texas, Arkansas, Tennessee.

Edwin Mohrig, No. 1510 Market Street, San Francisco, Cal. California.

A. L. Deane & Co., No. 1724 Lawrence Street, Denver, Col. Colorado and New Mexico.

Charles G. Kilpatrick, the one-legged trick rider, and his wife will hereafter ride Iver Johnson cycles, "the old established wheel with a new name." Kilpatrick has always ridden wheels manufactured by Iver Johnson's Arms & Cycle Works, and refuses to ride any other make. He, it will be remembered, is the man who achieved fame by riding down the Capitol steps at Washington. One of his greatest feats is to ride down a flight of steps 110 feet long, an undertaking which shows the nerve of the man and the strength of his wheel. His wife is also a first-class trick rider, and the two will give exhibitions in all parts of the country next year.

The Hardware Merchants' Association of New Haven, Conn., had a banquet several evenings since in parlors A and B of the Tremont Hotel. The men who surrounded the edibles and liquids were W. S. Clark, A. H. Jackson, N. H. Coe, J. H. Lyon, Frank Lindsley, Robert Lightbourne, Robert B. Bradley, William A. Warner, M. J. Welch, R. A. Warner, George Baker, E. L. Isbell, G. H. Bishop, W. H. Burchell, G. A. Bassett, F. L. Leighton, L. L. Rosenberg, G. W. Warner, H. E. Nettleton and Edward Hunn. Everybody made a speech and feasted himself to the limit of anatomical propriety.

The first calendar to reach us for 1896 is a handsome production from William Jessop & Sons, Limited, No. 91 John Street, New York. It shows a heroic female figure armed with a sword, and protected with a helmet and chain corselet, made of Jessop's steel. In other particulars also she is up-to-date. The background is of dark green and red, with a band of lighter color near the top. "Make no mistake; use Jessop's steel for tools, dies, cones, bearings, taps, etc. It is the best," is the anuouncement that appears across the face of the calendar.

Howard E. Stoughton, son of Edward P. Stoughton, of the Millers Falls Co., No. 93 Reade Street, New York, is representing the company on the road. His territory embraces Chicago, St. Louis, Kansas City, St. Joseph, Omaha, Sioux City, St. Paul, Minneapolis, Duluth, Milwaukee, Burlington, Davenport, La Crosse, Dubuque and other cities. Mr. Stoughton is making many friends in the trade, and has a bright future before him.

M. N. Sweet, of Battle Creek, Mich., representing Studley & Jarvis, of Grand Rapids, left Thursday for Louisville, Ky., from which point he continues South and West, taking in the principal jobbing points. His line consists of Cycloids in high grades, S. & J.'s in medium priced, and "445" Specials—the latter being cheap and juvenile wheels, something at an interesting price and light weight.

HOW TO EXTEND EXPORT TRADE.

The Massachusetts State Board of Trade, an influential organization composed of manufacturers and merchants of the principal cities of Massachusetts, recently invited Mr. F. B. Thurber, of New York, to speak on the subject of "Export Trade," at their annual dinner, which was held at the Parker House, Boston, November 22, 1895. Mr. Thurber's remarks were as follows:

Mr. President and Gentlemen of the Massachusetts State Board of Trade: As Chairman of the Committee on Foreign Commerce of the New York Chamber of Commerce, I have given some study to the question of broadening the market for American products; and I presume it is to this that I am indebted for the invitation to be with you to-day.

Some years ago, while on a voyage around the world, I made the acquaintance of an English cotton manufacturer in Bombay, who told me of the wonderful development of cotton manufacture in India, and prophesied that they would soon be supplying all the cheap cotton goods used in the East. I told him I had just come from China, where American cottons were taking the market for fine goods, because they were not loaded with clay like the English goods; and I said: "Well, if you take the market for cheap goods, and we for fine goods, what are the Lancashire manufacturers going to do?" "Oh," said he, "the mother country will open up Africa, and make it the fashion to wear breech clouts;" and, Mr. President, that is precisely what British statesmanship has been doing ever since. Every effort of an English manufacturer to reach new markets finds a ready response on the part of the British Board of Trade—a department of the Government—to support him. Diplomacy is not above advancing trade interests. Force is at hand to protect the rights of traders. Liberal pay is accorded to steam lines for the carriage of ocean mails, and the entire national influence is constantly exerted in this direction.

At the November meeting of the New York Chamber of Commerce, the Committee on Foreign Commerce submitted the following report, which was adopted unanimously:

"To the Chamber of Commerce:

The events of the past year furnish some object lessons to American producers, manufacturers and merchants, which are worthy of more than passing consideration. The war in the East has probably inaugurated a new epoch for hundreds of millions of people. The partition and opening up of Africa is scarcely less important in its ultimate results to commerce. Thus far our increase in population and wealth in this country has measurably kept consumption on a parity with production, but evidences are not lacking that this state of things cannot continue. If we would keep step to the music of the times, and keep our labor and capital remuneratively employed, we must bear in mind the wants of the other thirteen hundred and seventy millions of people who constitute the population of the world—both natural and creative, or educational wants. There are some encouraging signs that our people are not insensible to this: the favor with which the efforts to create a new navy and build up a commercial marine have been greeted is an earnest of times when the American flag may again be seen floating in all parts of the world. The genius of our inventors is everywhere recognized, the quality of our products everywhere commended. If we are true to our traditions and appreciative of our opportunities, the United States will lead the world in the race for commercial supremacy."

The following resolutions are respectfully submitted:

Resolved, That in the opinion of this Chamber, the present year marks an epoch in commercial history; that the present is a time worthy of the best efforts of our producers, manufacturers and merchants to extend the export trade of the United States, and that these efforts should be supported by a wise and progressive policy on the part of our Government. The principle of reciprocity should be recognized in our diplomacy; our Consular service be controlled by civil service rules and adequately compensated; and our carrying trade be fostered as far as possible by liberal pay for the carriage of mails on the ocean as well as on land.

Resolved, That the step recently taken by the present Administration in the direction of placing a portion of our Consular service on a business basis is worthy of all commendation, and should be followed as fast as practicable by further steps in the same direction."

Our own Government has been making progress in this direction, and our diplomatic and consular representatives are not lacking in patriotic interest; but we are far behind in organized effort to place the merits of our goods before the consumers of the world.

Perhaps this is not surprising, considering that our home market is the best in the world; and I, for one, would protect and develop to the utmost this outlet for our goods. That good man and good citizen, the late Peter Cooper, once said to me: "Mr. Thurber, nothing can be called cheap which leaves our own good raw materials unused and our own labor unemployed." And in this sentiment I fully concur. But a nation which controls such resources in fields, forests, mines and factories, as the United States controls; which has mastered the forces which now control the world—steam, electricity, machinery and publicity—as we have mastered them, will not be satisfied to ignore the market which the other thirteen hundred and seventy millions of consumers on the globe presents. But to get this market it is necessary to let the people of the world know the merits of our wares and have easy access to them. The chief thing necessary is publicity. It is useless to produce a good thing unless you let the world know it. From time immemorial the public crier, whether in street or minaret, has called men to trade or prayer. The printing press and the post office have become the public crier. I venture to say that every dollar expended in publicity has yielded, and will yield, a larger return than any other. No matter how crude or ill-directed, the sum total of results in the majority of instances will be on the right side.

There are many methods of publicity. Trade bodies may not be able to collectively advertise the specific merits of the wares manufactured by their members, but they can organize the conditions which make such efforts and expenditures effective.

A small co-operative expenditure on the part of the producers, manufacturers, carriers and bankers of the United States in presenting our facilities to the world at the present time, will yield fruit a hundred fold, and gradually transfer the center of exchange from the old world to the new, with all that it implies. The circumstances are ripe for intelligent effort. Seeing that our commercial bodies could not do the specific work necessary, I have only this week organized the "United States Export Association," incorporated under the laws of the State of New York, with a nominal capital, in order to limit the liability of its members to the amount of membership dues, and with the following specific objects in view:

1. To maintain at the chief seaport of the nation an information bureau for American exporters and foreign buyers, and endeavor to bring them together.

2. To advertise this fact abroad so as to stimulate inquiry, and through intelligent agents keep our manufacturers and producers posted on what our foreign competitors are doing.

3. To co-opearte with and encourage every individual

Digitized by Google

and collective effort to extend the consumption of American products.

If this can be made a nucleus around which American interests will rally they can conquer the trade of the world. Trade is the great missionary, and if we ever realize Tennyson's dream of "the parliament of man, the federation of the world," it will be through the efforts of the manufacturers and merchants of the world.

The export trade papers published in the language of the countries where circulated, are sowing good seed, and the commercial museums furnish a link in the chain of effort. The city of Philadelphia, as you are perhaps aware, has established such a museum, supported by an appropriation from the municipal government of $50,000 a year. A building known as "The Bourse," covering a block of ground, designed for offices and general business purposes, with a portion of the space adapted to commercial exhibits, has recently been erected there.

In New York the Goelet estate, some five years ago, erected a similar building, covering the entire block between Forty-third and Forty-fourth Streets, Lexington Avenue and Depew Place, and an effort was made by a private company to establish a permanent commercial exhibition; but lacking municipal support and failing to secure sufficient revenue from exhibitors, it failed. It has, however, been recently organized, and with manufacturers at the present time more alive to the usefulness of such effort in bringing producers and buyers together, it bids fair to succeed. If such an enterprise can be useful anywhere, it would seem that the place for it is at the commercial threshold of the continent, a port at which 66 per cent. of the imports and 47 per cent. of the exports of the entire nation arrive and depart.

I bespeak for all of these efforts the intelligent encouragement of the great interests which the men around this board represent. Many of you spend thousands of dollars a year in advertising and pushing for domestic trade; and, while not advocating that you relax your efforts in that direction, I earnestly call your attention to the advisability of sowing a little seed in the virgin soil of export trade. Some of you have already done so with good results. Others have attempted it when conditions were less favorable, and, perhaps, have been disappointed; but the time was never so ripe for intelligent effort in this direction as at present.

"Hop's" Corner.

When jobbing houses in the various lines were plentiful, especially in the days "before the war," it was the custom for the resident salesmen—"travelers" as we know them at present, being an unknown quantity—to make an iron-clad "combine," so that buyers for an assorted stock, especially for a country store trade, couldn't get away from the metropolis until every bit of their purchases possible to keep here was kept from going to Boston or Philadelphia, both cities being noted for selling some lines of goods at a closer profit than New York, and thus making them worthy of receiving a visit from the buyers shrewd enough to study the shades of distinction between markets.

One of the best working combines I ever knew in those times, was formed by George Knickerbocker (hats and caps, etc.,), Stale N. Wood (clothing). (He was for a number of years, recently, forestry commissioner, retained in office for at least five years, waiting for a Democratic legislature to confirm a successor.) John Brownson (Yankee notions), and George S. Huntting (Hardware). These young workers all came from Cattaraugus, Wyoming and Allegany Counties, N. Y., positively green when they landed in the city from their rural homes, but with an acquaintance among the many storekeepers in those three counties, and knowing almost everybody else. They used to stay in New York during eight months in the year, the business being done in seasons, spring and fall, and then go home in the summer and winter, two months each time, drive around with horses and wagons owned by themselves, visiting every hamlet; not to sell any goods—for then these customers in the different seasons laid in a six months supply—but to shake hands with their customers, patronize the tavern for a "ball" or two, and keep up the confidence and close acquaintance which made the dealers seek them as soon as they reached the city in quest of goods. The boys did not wait until they came to the store, but would hunt them up at the various hotels, it being part of their daily duties on their way home to look over the registers of a number of hotels and note the arrivals, and I can remember how extremely interesting it was to do so. When the customer arrived the boys would usually give him a good rousing old time for the four or five days which constituted the visit, but would manage to pass him around to each of the combine, until they could not think of another thing to sell. Then again the combine were useful in more ways than one; they frequently bolstered up the credit of a customer, who without some such help would know embarrassment. You see a countryman buying on such long time as six months, had to show he was worthy of credit; in which matter the combine would furnish a reference from each house they represented; and when as sometimes happened a customer did get in financial trouble, the boys would engineer a fair settlement, and in many ways were faithful to both the house and customer, and the tribe of hungry lawyers had but small chance to make a dividend. These combines are not so largely prevalent now. The traveling representatives from the various jobbing houses have made the dealer's visits few and far between. He buys now at his own door on short time, all the goods he wants; and can buy from competing concerns, thus keeping profits low and assortments good.

"Hop."

The Samuel I. Goodall Co., No. 605 South Seventeenth Street, Philadelphia, manufacturers of Bailey Pattern Planes, will, about the first of the year, enlarge their plant and add more machinery, which will enable them to increase their output. They feel confident they are now making the best Bailey Planes and are very much pleased at the result of this year's business.

At a meeting of the Kansas City Implement, Vehicle & Hardware Club these officers were elected for the coming year: F. L. Kaufman, president; F. E. Lally, vice-president; A. G. Trumbull, treasurer; O. V. Dodge, secretary; George M. Moore, John Conover, W. S. Dickey, J. S. Welsh and George W. Fuller, executive committee.

The Kansas City Stove Works, Kansas City, Mo., have been incorporated by D. A. McKibben, John A. Moore, William Masters, John A. Duncan and Frank Kump; to manufacture and repair furnaces, stoves and ranges of all descriptions. Capital stock, $40,000.

The Stiles & Fladd Co., Watertown, N. Y., has been incorporated by G. A. Bagley, W. A. Knowlton, F. C. Fladd, E. S. Stiles and Albert Fish, of Watertown; to manufacture presses, dies and general machinery. Capital stock, $60,000.

The Plano Implement Co., Plano, Ill., has been incorporated by J. E. Turpin, W. W. Owen, F. W. Lord, A. C. Sanders, C. M. Morris and J. D. Morris. Capital stock, $36,000.

ILLUSTRATED BICYCLE NOVELTIES.

MANUFACTURERS and DEALERS are invited to make FREQUENT USE of these columns.

Anything NEW in BICYCLES or BICYCLE NOVELTIES should be sent us immediately. NO CHARGE, direct or indirect, is made, as our interest lies in SHOWING THE HARDWAREMAN what is going on in THE BICYCLING WORLD.

When your NOVELTY is ready, send us an Electrotype and descriptive matter, which will appear immediately.

Nies Emergency Tire Clamp.

Nies & Person, No. 160 Fifth Avenue, New York, have introduced an Emergency Tire Clamp as here illustrated

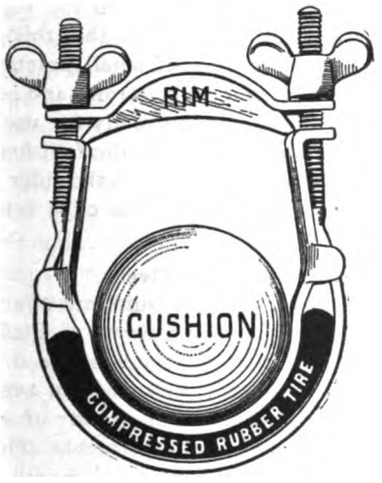

FIG 1.

for use on bicycles in case of a torn or punctured tire. The device consists of two arch-shaped, nickel-plated steel bands, about ¼ inch wide, placed one inside of the other and adjusted by the use of thumb screws, as in Fig. 1. When a tire is punctured the two arched bands are taken apart, and one band is placed over and the other under the tire, the upper one covering the puncture, when the bands are brought together by the use of the thumb screws, thus pinching the tires together and shutting off the punctured portion. The tire is then inflated to complete the repair. The clamp being semi-circular in shape, forces the tire to maintain the same form as the balance of the inflated wire. The clamp weighs less than two ounces. For a torn tire or larger hole, two clamps are used as in Fig. 2. The clamps are adjusted on the tire in the manner already described, one clamp being placed on each side of the opening. A rubber ball or cushion is provided to place on the rim directly under the hole and between the two clamps, though not so shown in Fig. 2, after which the clamps are tightened until the tire is pressed sufficiently to prevent the escape of air from the injured portion, when the tire is inflated. The point is made that when riding with the clamps on the tire no jar is felt, as the upper contour of the tire is not disturbed, and that the clamps do not cut the

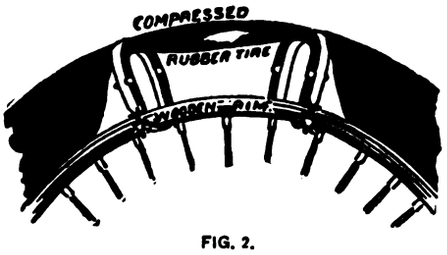

FIG. 2.

tire. For a leaky valve a clamp is placed on each side of the valve. The manufacturers remark that while the device is intended for temporary use, a tire mended in this manner can be used for any necessary length of time.

Simplex Repair Outfit.

The New York Tire Co., Nos. 59 to 61 Reade Street, New York, are placing on the market a Repair Outfit of single tube tires as illustrated herewith. It consists of a reamer, expander and plug holder. In use the puncture is first enlarged with the reamer, Fig. 1, by working it around and down as far as it will go, after which the point of the

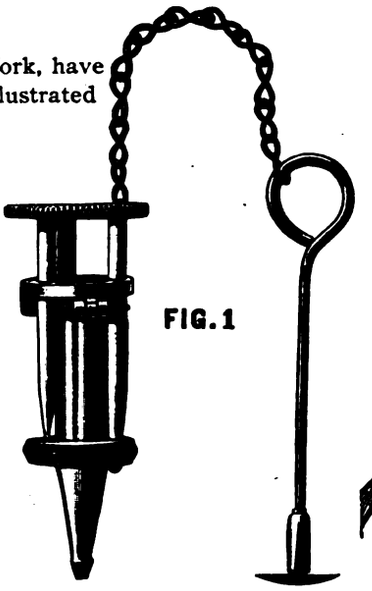

FIG. 1.

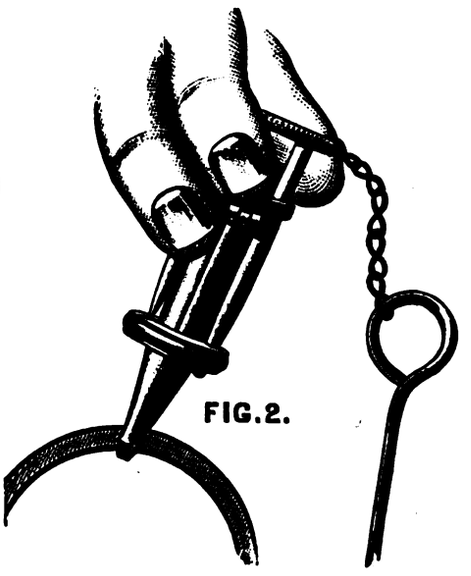

FIG. 2.

expander is forced through the puncture as shown in Fig. 2. The top plate of the instrument is then forced down until it touches the plate beneath it, as shown in Fig. 3, thus expanding the puncture. The rubber plug is then placed on the end of the holder, as shown also in Fig. 3, and is ready for insertion. Cement is then applied around the shank of the plug and the flat surface. The convex portion of the plug is moistened and the plug is forced through the tool until

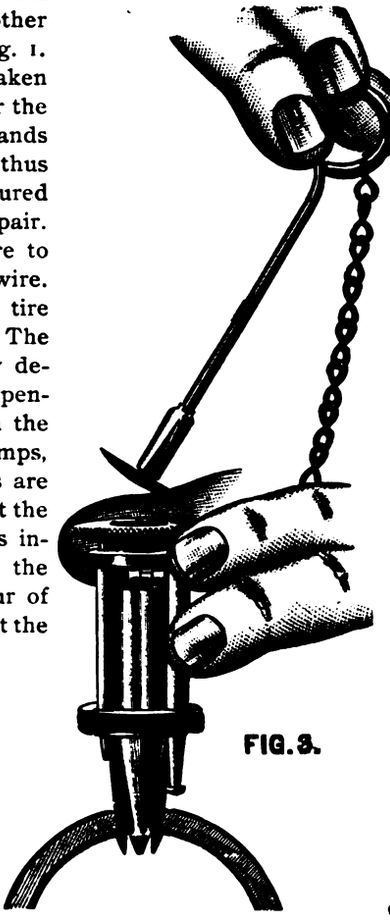

FIG. 3.

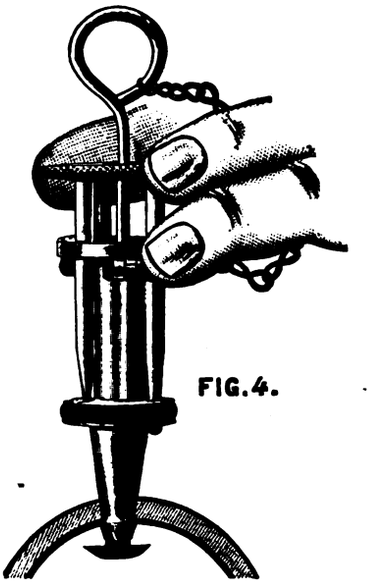

FIG. 4.

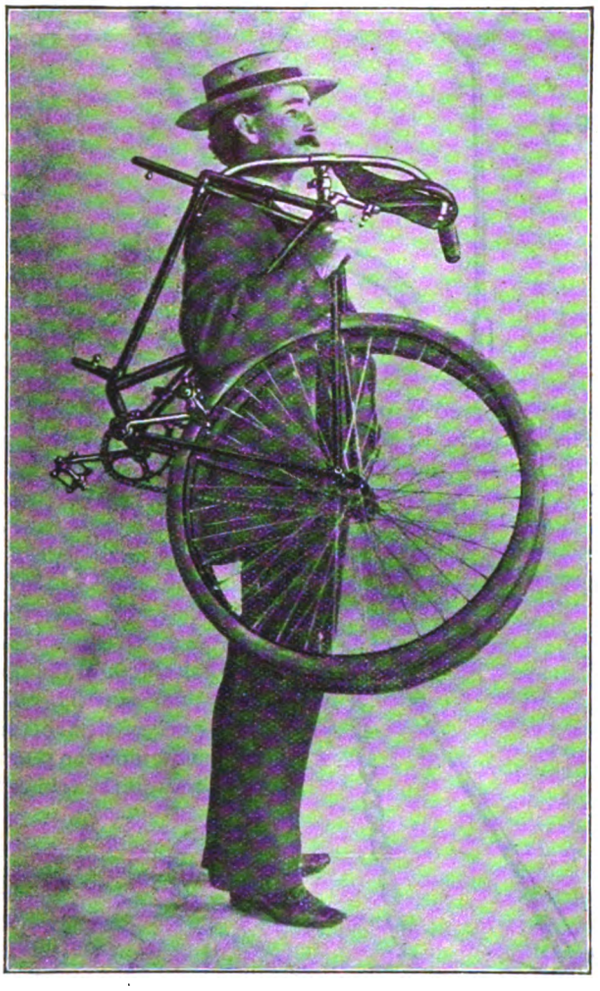

the ring of the holder strikes the top plate; after which pull back the plate, which has been previously forced down, to its former position. The tool is then withdrawn and the plug grasped by the shank, is pulled until the head of the plug rests firmly against the inner wall, where it is held until the cement holds. The tire is then inflated, and the

Digitized by Google

projecting shank is cut off nearly level with the outside face of the tire.

The Folding Bicycle.

The Folding Bicycle Co., Bridgeport, Conn., are placing on the market the Folding Bicycle as here illustrated. It is riveted in the centre, and by pressing the two spring bolts which release the locks, the front part of the machine can be swung round against the rear, thereby making it only half its original length. It is stated "that the folding device does not detract from the strength or beauty of the cycle, but on the contrary adds to the strength, by reason of its peculiar method of bracing, and the shorter reaches of tubing; there are no small or loose parts, and any rattle or vibration is impossible. The spring locks are so arranged that the tendency is to tighten when the machine is running, and any such thing as the locks working loose while riding is entirely out of the question. The device

adds but one pound to the weight of the machine, and is folded or unfolded in an instant, and can be done as easily and quickly by a lady as by the most skilled mechanic, and locks automatically when thrown into position.' The company say "that the bicycle illustrated here weighs 25 pounds, has 28-inch wheels and 43-inch wheel base; it has been in constant use for eighteen months, and been subjected to all manner of tests that could be devised by the officers of the cycle corps of five leading European countries, where it has been shown. It has carried a rider weighing 175 pounds on a tour through Holland, Belgium, Germany, France and England—fully 2200 miles, and has been seen and admired by army officers in each of these countries. It has been shown in four different exhibitions, and in explaining it, has been folded and unfolded more than a thousand times; yet the frame is just as rigid as the day it left the factory, and not one cent has been spent for repairs." The Folding Bicycle is recommended by the manufacturers to riders living in flats, apartment houses, rooming and boarding houses, and the occupants of the office buildings of large cities, and clerks in stores, and for city use generally.

The Morgan & Wright Toe Clip.

Morgan & Wright, Chicago, Ill., have placed on the market the Toe Clip herewith illustrated. It is made of rubber in the form of a band which encircles the foot at the pedal.

The usual steel clip passing backward from the toe is no part of the contrivance. It is pointed out that this clip is intended for racing purposes and is of small practical use to the ordinary rider. It is said to be strong and serviceable, light and durable, and is always ready for use without special adjustment, and that it holds the foot firmly to the pedal, prevents side slip, and thus gives the rider power on the upward movement of the foot. The clips retail for 25 cents per pair.

Red Cross Enameling Oven.

Arlington U. Betts & Co., Toledo, Ohio, are offering to the trade the Red Cross Enameling Oven as illustrated here. The company state that the material used in the construction of the oven is strictly first-class in every respect. The base or frame is of the best quality of smooth castings, and the double side walls of steel. The side walls are double, and the space between filled with asbestos, so that very little heat escapes, and when the oven is once hot, it requires but little effort to keep it at an even temperature. The material to be enameled is placed in the oven at the top and the heat regulated from the burner in the base. The temperature is registered on a thermometer made expressly for the oven, and attached to the inner wall of the oven, so as to be easily read through the open parts which are fitted with mica. The fuel used can be either gas, gasoline or kerosene. The ovens are fitted

with either, and the customer furnished with whichever style he may designate. When the burner is not mentioned, however, they always send kerosene, as they have found from experience this is the cheapest, strongest and most reliable of the three styles of heat. With this new patent burner, there is no smell, smoke or dust. The heat

Digitized by Google

is steady and easily regulated with a patent screw adjuster. Each oven is provided with a pamphlet, and instructions "How to Bake Enamel." With these ovens and these instructions carefully followed out, a successful baking can be done every sixty minutes. "This is a wonderful saving of time over the old process, which usually required from four to six hours." The company furnish enamel in the following colors: White, black, cream yellow, robin egg blue, rose color, deep blue, orange, primrose, vermilion, light green, cycle blue and drab. Any special color made to order.

United States Trade With Para.

Geo. G. Matthews, United States consul at Para, writes as follows: Merchants and manufacturers of the United States to fully appreciate the importance of Para, without which they cannot hope to reach the highest point of success in the extension of our trade at this port, would, I feel, be benefited by a more intimate knowledge of its resources and industries. I will not minutely sketch the outlines of a city already so well known, but will simply enumerate some of the industries of this part of the world, to show the progress of Para in recent years, indicating a prosperity that will yet make it the most important of South American cities.

When we remember that there are 50,000 miles of navigable rivers upon which to float and extend her trade, and that these flow through one of earth's richest valleys, one can not fail to see that this, at no distant time, will be the most populous of Brazilian cities. Up to the present time, its growth has been the outcome of natural production, and, notwithstanding the limitless resources by which this city is surrounded, which, were they developed, would make this country agriculturally one of the most important in the world, these advantages have been almost totally neglected, for the reason that people have prospered and grown rich with greater certainty, and much more rapidly, at something else than they could hope to at agriculture. If, as is claimed by those best versed in the rubber industry, trees planted from the seed can be tapped in twelve years, and made profitable in twenty years, while the old trees, if judiciously cared for, will live for from sixty to seventy years, it can plainly be seen that this unequalled source of natural wealth can be perpetuated. There is little doubt of its being explored and developed in the near future.

The geographical position of Para is one of the best in the world. The city not only commands the commerce of northern Brazil, but through the tributaries of the Amazon is reaching her arm of enterprise and commerce into Peru and Bolivia, where it secures a large portion of the trade east of the Andes. These points are mentioned with the hope that our business men may fully appreciate the growing importance, and understand the advantages that will accrue to the country and people that secure the trade and first introduce their products here.

In many respects the people are peculiar. For example, when a certain brand of flour has been introduced, it is very difficult to sell any other grade, though of a superior quality. In fact, they are slow to experiment in business, and prefer to continue trading with old customers, unless they get very great advantages to change. So one can see readily that the policy is to be the first when possible, and to secure the markets that are continually opening up in the interior portions of South America, which, once secured and well accommodated, will not be difficult to retain. There never was a time before in the history of the two countries when Brazil was more friendly to American interests, or so willing to extend to her advantages commercially, as now. This feeling, if taken advantage of, must lead to largely increased trade between our country and this.

The only articles of which we have a monopoly in Para are flour, lumber, and kerosene; whereas we should be supplying all the cotton goods, instead of the very small portion that we now send here. The universal cry of men representing American houses at Para is that our manufacturers will not comply with the demands of the market, while English, German and French manufacturers accede to every demand. Goods containing 60 yards may be desired with only 20 or 30 yards, and may be required with a greater or less width, as the case may be. It is claimed by men who represent American houses here that our manufacturers will not make the required changes to accommodate the market, and thus secure the trade, while other countries cheerfully comply with every requirement, and consequently get from Brazil a rich patronage that, with proper attention, with the advantages that we can obtain, would, in a great degree, be enjoyed by our country.

An Extraordinary Litigant.

The case of The People vs. Shanks will probably make a little history—legal history, but still, history. It is pretty difficult to conceive of a man who, without any possible interest himself, will sue a large corporation, go on his own bond in filing an attachment, knowing all the while that he had not a cent in the world, and could not satisfy judgments of many years' standing against him. Yet this is what was developed in the case of The People vs. Shanks. Shanks brought an action last spring against the Magnolia Metal Co. on an assigned claim by discharged employes for $7,000. As the Magnolia Metal Co. was a foreign corporation, some one had to qualify as surety in bringing an attachment suit. As a matter of fact, Shanks acted both as plaintiff and bondsman. More extraordinary still, he did so on the advice of counsel, who knew his financial condition, and, to add to the incongruity of the situation, his counsel stated that Shanks had no pecuniary interest in the assigned claim in question.

Col. Alexander S. Bacon, of No. 34 Wall Street, did the probing; Linus A. Gould and S. Victor Constant, of Constant & Coghill, assumed the responsibilities for the action of his client, Shanks, and Police Judge Kudlich heard the case and couldn't see any particular merit in the plea that he alleged perjury was advised by counsel. Colonel Bacon, the attorney for the Magnolia Metal Co., has for years been attending litigation growing out of suits brought by dummies in the interest of large corporations inimical to the Magnolia Metal Co.

The petty annoyances have grown to be intolerable, and the company is invoking the law and is bringing these irresponsible offenders to justice. It is an open question whether a trust is not forming in the anti-friction metal business, and the fact that the Magnolia people have the standard metal which, for about the same price, gives three times the same service, has undoubtedly excited the cupidity of competitors who wish to take over the company's assets and good will without paying for them.

C. B. Miller, president of the Magnolia Metal Co., stated in an interview yesterday that he had traced discharged employes directly to the offices of the National Lead Co., the Hoyt Metal Co. and others. He also stated that his company had brought suit against the Sterlingworth Railway Supply Co. for $120,000 damages for breach of contract, under circumstances which bear out the theory of an attempted combination in bearing metal.

One of the leading stockholders in the Sterlingworth Railway Supply Co. is said to be a prominent official in the Standard Oil Pipe Line.

In spite of considerable persecution, the Magnolia Metal Co. has thrived to such an extent that its very metal is now in use in most of the navies and railroads of the world, as well as in all classes of mechanical industry.

However, the adoption of such methods as are disclosed in the Shanks case and the countenance of them by the members of the Bar is a serious menace to all honestly conducted enterprises.—*New York Commercial Advertiser.*

NEW GOODS IN THE MARKET.

If you have anything NEW, let the world know it by illustrating it in these columns.

NO CHARGE WHATEVER is made, direct or indirect, as our interest lies in showing the readers of "HARDWARE" where the LIVE manufacturers and wholesalers are, and what they are doing.

When your NOVELTY or SPECIALTY is ready, send us an Electrotype and descriptive matter, which will appear immediately.

The Hardwaremen everywhere read this department; it is to your interest to make prompt use of it.

The Niagara Spray Ejector.

S. J. Putnam, Prince Bay, N. Y., has brought out the Niagara Spray Ejector for flushing slab urinals, as here il-

FIG. 1.

lustrated. The maker says that this modern sanitary invention not only economizes in the use of water, but also overcomes the annoyance from clogging so often experienced with perforated pipe. The ejector shown in Fig. 1 may be secured into the front side of the supply pipe, which passes across the stall. The force of water on the internal spherical head of the screw cap at the slot throws a fan-shaped spray obliquely against the slab, flushing the

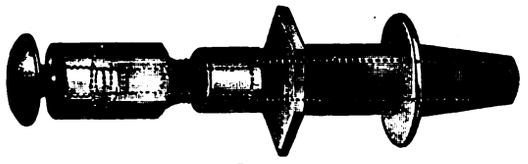

FIG. 2.

entire surface in an efficient manner. It is pointed out that as the outlet is equal to only two holes in a perforated pipe, a large saving of water is evident, and owing to its peculiar construction there is but little chance for clogging. If the spray should become clogged by rust or dirt it can be instantly cleared without disturbing the couplings. As the screw cap is provided with a stop, no part can be lost or destroyed. The special coupling shown in Fig. 2 is

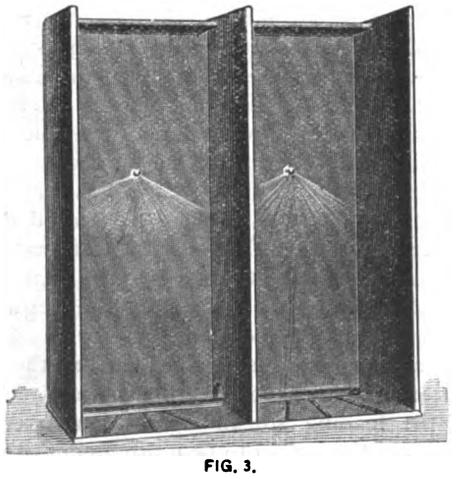

FIG. 3.

used for high class work where the supply pipe is behind the slab. It passes directly through the slab and is clamped firmly to the same by the nut which is provided with left-hand thread. Fig. 3 shows two stalls with fixtures complete and water turned on.

Steel End Hose.

This is the name given to a new brand of hose, designed especially for garden and hydrant use, which the New Jersey Car Spring & Rubber Co., of Jersey City, N. J., have added to their already very complete line of hose. It is of the same high grade of manufacture characteristic of all the products of this company, but differs radically from their regular brands of hose, in the ends, which are fashioned in the manner shown in the engraving. "It is the common experience of all who have occasion to use hose,

especially the smaller sizes, to find that in a short time it becomes broken at the ends because of the short and frequent bending it receives just where the couplings are attached. The result of this breaking of the hose is an annoying and wasteful escape of water at these points, which not only diminishes the pressure of the water at the nozzle, but generally succeeds in wetting the user of the hose from head to foot. There is no possibility of this occurring with the Steel End Hose. Between the plies of duck at the ends of each section is inserted a steel spiral, which not only adds materially to the strength of the hose, but effectually prevents it from bending at these points, insuring longer life and greater cleanliness and comfort in its use. The plan is so plainly an improvement and so full of everyday common sense that it cannot fail to commend itself to the trade generally." Prices and samples, we are informed, may be obtained from the manufacturers upon application.

"Common Sense" Self-Tilting Kettle.

R. B. Vanderburg & Co., No. 21 Wabash Avenue, Chicago, are sole agents for the new Common Sense Self-Tilting Kettle, illustrations of which are here shown. The kettle has several special features, covered by patent, which will be set forth more distinctly with the aid of the accompanying cuts. It has double bails to be operated with one hand instead of having a single bail. One of the bails is shorter than the other, the two being linked together at the centre. In carrying, the kettle is kept perfectly level, being prevented from tipping by the link connecting the bails which acts as a stay. The bails are hung to ears having double lugs, the rear lug being a little back of the

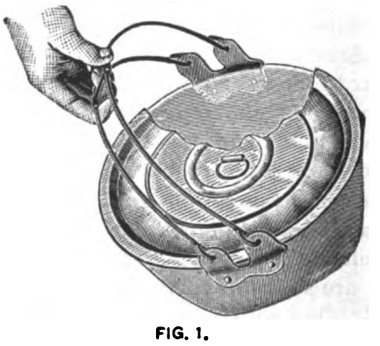

FIG. 1.

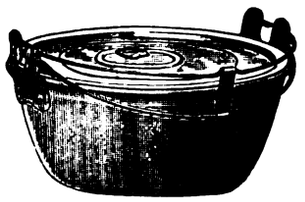
centre of the kettle and the forward lug about an inch nearer the lip. The object of this arrangement is to secure the leverage for tipping as shown in Fig. 1, which illustrates the position of the bails when pouring or draining off the contents. The rear lug comes straight up from the kettle, while the front lug is made with a groove directly above the rim of the kettle as shown also in Fig. 1, in which the cover is partly broken away for this purpose. The groove curves with the kettle, thus making the forward ends of the groove on each side closer together than the rear. By this arrangement the cover slips in from the back and when the kettle is tipped the cover is prevented from

Digitized by Google

falling either down or forward. For draining vegetables the four fingers hold the shorter bail and the thumb presses forward the long bail, causing the kettle to tip easily. The steam arising from the kettle escapes from the small opening at the top between the lid and the kettle. The bails

FIG. 2.



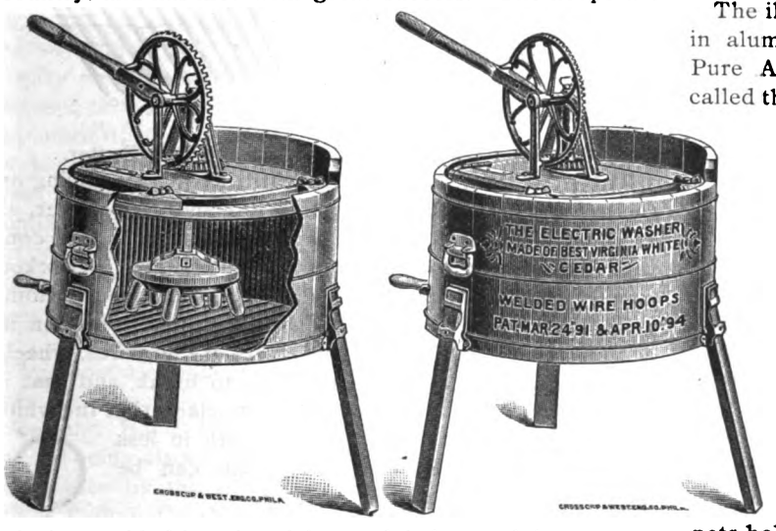


FIG. 3.

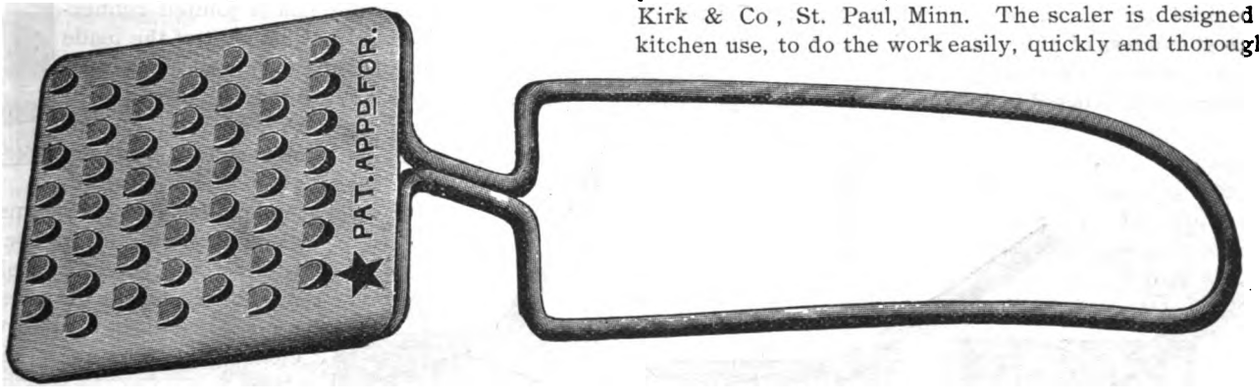
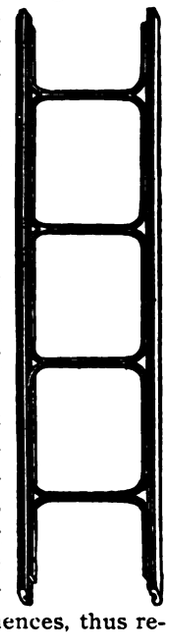


may be crossed as in Fig. 2, so that when the kettle is used over a gasoline or gas flame the bails are above the flame and are thus kept cool. An important point claimed is that in no operation is it necessary to use a protection for the hand against heat or steam. The bails fall to the outside, thus allowing the kettles to be easily nested, as shown in Fig. 3, or making them convenient for store or pantry shelves. Eight sizes are made, ranging from two to ten quarts. They are furnished in gray enameled ware only.

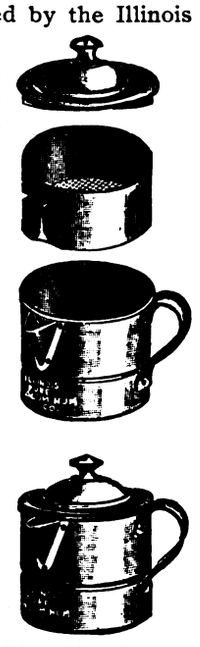
The Electric Washer.

This machine, made by the Richmond Cedar Works, Richmond, Va., has attracted great attention all over the country, and has met with great success. The hoops are



of wire, welded by electricity, and being sunk in grooves, makes it impossible for them to come off. All metal parts of the machine are heavily galvanized, and the castings are designed for great strength. The manufacturers call attention to the square galvanized iron rod which works

the agitator, which is spoken of as "a great improvement over the wooden post, which tears the clothes."



"Indiana" Ladders.

The Indiana Ladder Co., Indiana, Pa., have been in business since 1892, and have learned a good many things about the construction of Ladders. The products of this company are to be found in nearly every State in the Union; visitors to the Atlanta Fair can see the display of Ladders made by the company in the Transportation Building. We illustrate herewith one of the patent Bent Rung Ladders put on the market by this company. It is made of strong light wood, the edges being slightly rounded as a convenience in handling. The centre of the side has a groove 3-16 of an inch deep, and the width of the rungs, in which the rungs when bent, fit neatly. They are nailed with wrought iron annealed nails, the nails going through the side and clinching. It is pointed out that the rungs being made of the toughest hickory, and laying along in the groove in the side, makes it stiff and increases its strength. Each rung acts as a brace between itself and the side, which makes the ladder strong. It is further stated that the rungs never get loose, nor do the side pieces split from wedging the rungs, that by the method of making the rungs in these ladders strength is gained also from the fact that the breaking points do not extend the whole width of the ladder, as is the case with those of ordinary make, but only from where the bend commences, thus reducing the liability of breakage of rungs. They will be pleased to send illustrated catalogue on the asking.

Anti-Tannic Tea Infuser.

The illustrations herewith presented show a new article in aluminum which has been introduced by the Illinois Pure Aluminum Co., Lemont, Ill. It is called the Anti Tannic Tea Infuser. Aluminum is eminently fitted for cooking utensils of all kinds, owing to its lightness, strength and the ease with which it is kept clean. The company say that tea leaves stewing at the bottom or hottest part of the steeper rapidly develop tannic acid, which is highly injurious and very disagreeable. They explain that these disagreeable features are done away with in their new Tea Infuser by having the steeper near the top of the pot. These pots hold a quart.

The Macklett Star Fish Scaler.

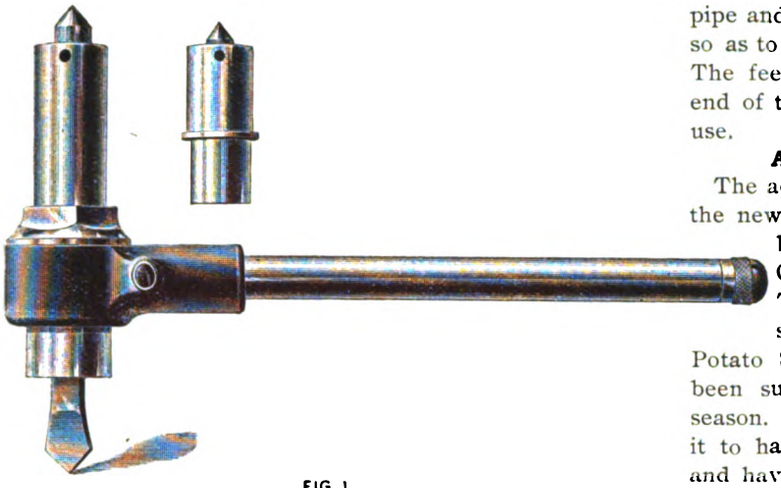
The accompanying illustration represents a Fish Scaler, full size, which is put on the market by Farwell, Ozmun, Kirk & Co, St. Paul, Minn. The scaler is designed for kitchen use, to do the work easily, quickly and thoroughly. It is remarked that the device is cheap, that it will last a lifetime, and that it is easy to keep clean. The goods are packed one dozen in a paper box, twelve boxes in a case.

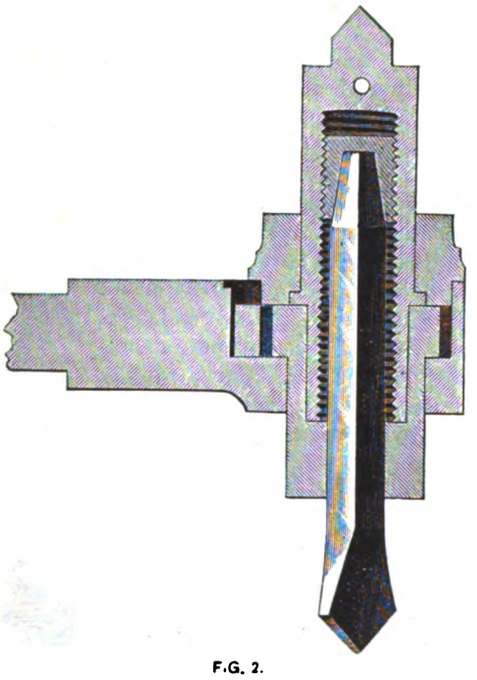
A New Ratchet Drill.

The Anderson Machine Works, Peekskill, N. Y., are offering the Ratchet Drill here shown, in which the novel

Digitized by Google

idea of feeding the drill itself outward and keeping the machine in its original position as the drilling proceeds, is adopted. The construction of the tool will be readily understood by an inspection of the sectional view, Fig. 2, in which it is seen that the drill is forged from a square bar and passes through a square hole in the stock by which it is driven, while the externally threaded piece above, into which the tapered end of the drill fits loosely, feeds it downwards, when the sleeve into which it is threaded is prevented from rotating with the drill. By this construction very little room more than the length of the drill itself is required, and it can be used in very restricted places. Great steadiness of the drill is also secured, and all the working parts are thoroughly protected from dirt and chips, yet are readily accessible by unscrewing the cap. When this is removed the whole tool can be taken to pieces. The manufacturers state that the drills require no special fitting, as the socket takes ordinary sizes of bar steel, and the end of the drill fits loosely in the nut. A long or short threaded sleeve can be used and the change be made from one to the other in a few seconds. The handle is of steel pipe and is fitted into the stock so as to retain its full strength. The feed rod screws into the end of the handle when not in use.





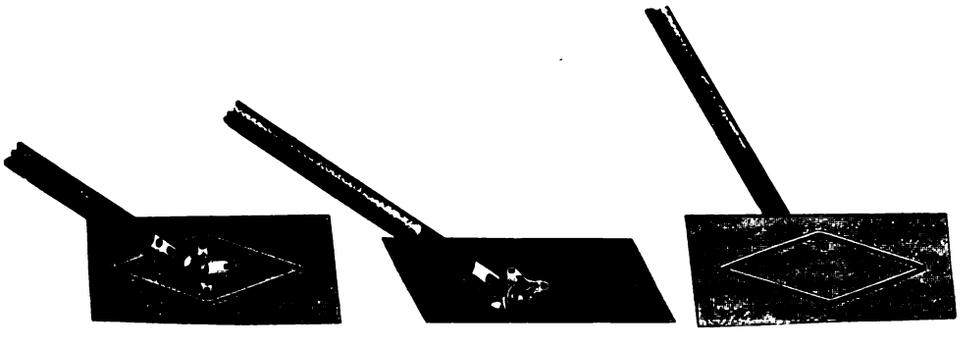


FIG. 1.

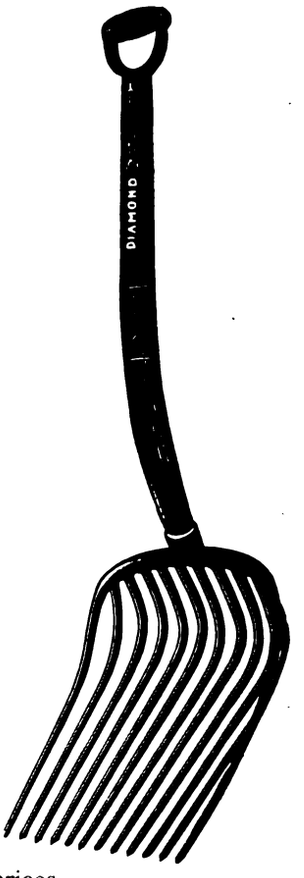
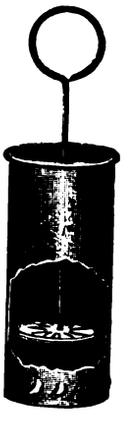


F.G. 2.



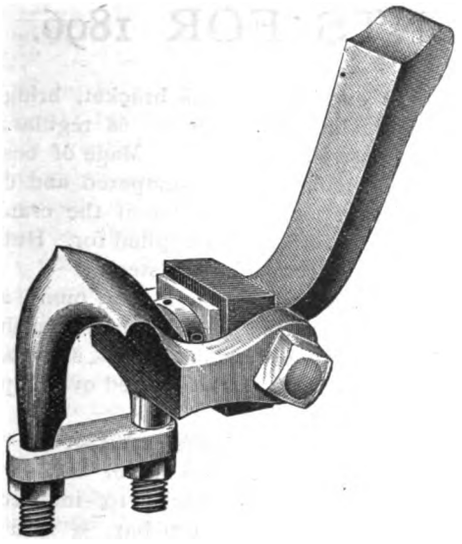
A New Coal Fork.

The accompanying cut shows the new Coal Scoop Fork made by the Ashtabula Tool Co., Ashtabula, Ohio. This fork is similar in shape to their celebrated Potato Scoop Fork which has been such a success the past season. Its scoop fork causes it to hang better, work easier and have a larger capacity than the old pattern, and is described as "unequalled for handling either hard or soft coal, lump or nut size, and those giving it a trial will use no others. These forks are of the very best quality and are fully guaranteed." This company also make a complete line of large forks for all purposes, such as forks for handling coke, cinders, tan-bark, etc. Anyone handling these goods will find it to their advantage to write them for catalogue and prices.

Champion Surprise Cream Whip and Egg Beater.

The John Tobin Mfg. Co., Newark, N. J., are placing on the market a combined Cream Whip and Egg Beater, as seen here. In use the cylinder is placed in a bowl containing the eggs or cream, and the plunger is worked rapidly up and down. The cylinder has an open bottom, and the beater is referred to as being double suction in action. The point is made that there are no wires, wheels or cogs to get out of order, no glass to break, and that it is easily cleaned. The manufacturers claim that the white of eggs can be beaten to a stiff froth in less than thirty seconds, and that cream can be whipped in less than three minutes.

Diamond Steel Scraper.



A. M. Ross & Co., Ilion, N. Y., are introducing the Diamond Scraper as here shown. The blade is 6x18 inches in size, struck up and corrugated to give strength from the centre to the ends. The handle has a jointed connection to allow of a quick adjustment of the blade in a desired position, to push, pull or scrape. At the same adjustment it may be turned over to use on the other side at a different angle. The tool is designed for use in barns, for cleaning snow and refuse from walks, roads, street and electric roads, etc., and is also designed for use as a hoe or shovel for cleaning, grading and other purposes.

Boss Shaft Coupling.

The Boss Lock Nut & Coupling Co., No. 20 Vesey Street, New York, are putting on the market the Shaft Coupling here illustrated. Not the least desirable feature of a shaft-coupling for carriages and

Digitized by Google

other vehicles is that it shall be noiseless, and a leading object of the inventor of this coupling, we are informed, has

been to secure absolutely "no rattle." While the engraving has not been designed with a view to making the rubber cushion prominent, readers doubtless will be able to recognize it in the square block in the centre of the device, which has been shaded a little in the drawing. The design of the inventor is that this rubber shall fit so closely as to prevent any rattling from the working of the metal parts. In addition to this desirable achievement, he has kept in mind the need of providing for the time when the rubber shall have become worn, and an arrangement of metal washers is included, whereby there may be an easy and quick adjustment to take up the loss, until the cushion has been entirely worn away. Good service is promised from the rubber from one to two years.

Colt's Bit Brace and Hand Drill.

The illustrations here given represent a Bit Brace and Hand Drill which is being placed on the market by the Alford & Berkele Co., No. 77 Chambers Street, New York, as sole agents. When used as a drill, Fig. 1, the chain and clamp shown in Fig. 2 are placed in position on the brace, the chain passed around the metal and locked by dropping it into a slot in the clamp. The threaded sleeve upon which the attachment works, and the hand wheel are of one piece, so that feeding the drill is accomplished by turning the wheel as the work proceeds. The sleeve at the lower end works upon ball-bearings. The brace has a ratchet attachment, and is particularly useful in overhead drilling. The tool is also designed for all kinds of regular work, and, it is stated, will drill iron or steel as easily as wood can be bored. When the braces are not required for drilling, the clamp can be

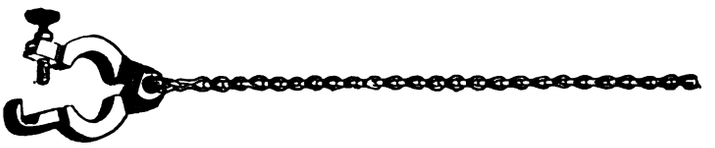


FIG. 2.

quickly detached and the brace used for boring wood as in Fig. 3.

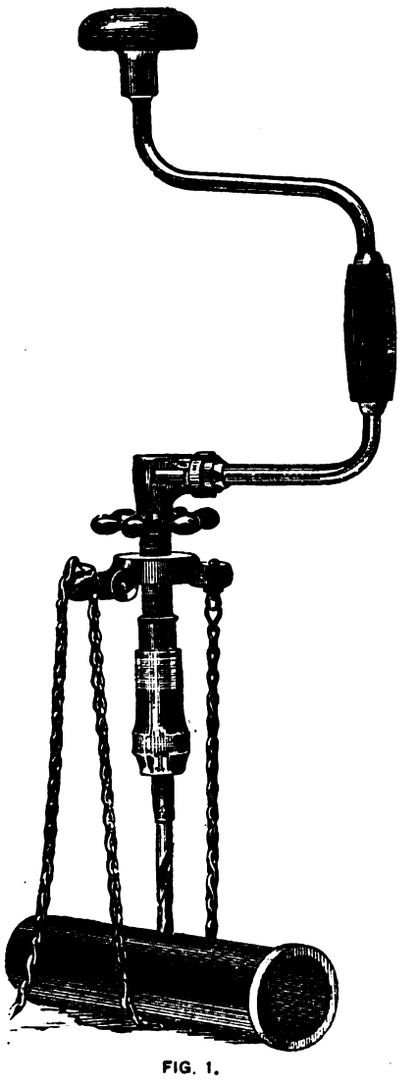

FIG. 1.

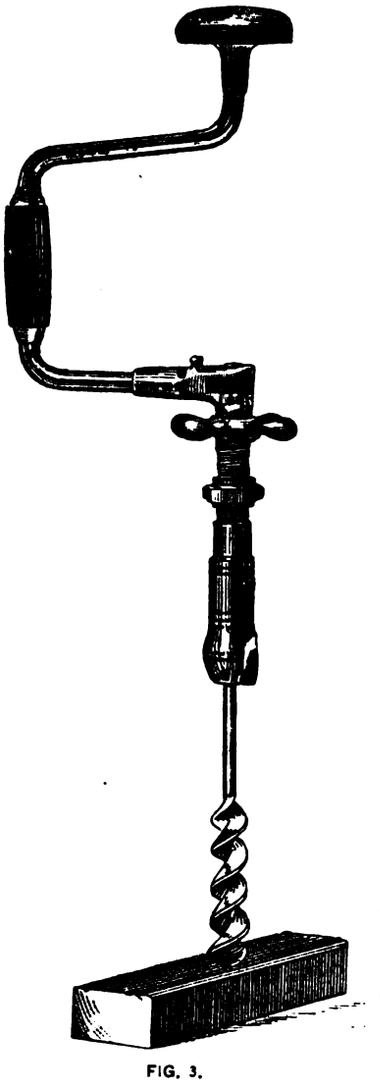

FIG. 3.

Big Bicycle Combination.

The Wheeler & Wilson Co. have just consummated a deal whereby they will handle the immense output of the Liberty Cycle Co. throughout the entire West and South. Bicycle agents are now being appointed and agencies established in every city and large town in those sections. The number of such agencies, it is said, will hardly fall short of 2500. The Chicago house will carry the Western territory, the St. Louis house the Southwestern, and the Atlanta house the Southeastern. An immense stock of bicycles will be carried at these points in order that the many agencies may be quickly and amply replenished. Over 20,000 Liberty bicycles of the '96 pattern are now in process of manufacture, and by this arrangement they will be as well represented as any wheel on the market. Taking the pronounced success which has attended the establishment of its numerous sewing machine agencies as a criterion, the new venture bids fair to be remunerative to both the Wheeler & Wilson Co. and the Liberty concern. The Wheeler & Wilson Co. will not interfere with the Liberty Co.'s agents or agencies in the New England and Middle States, which will remain under the supervision of J. S. Bretz, the general superintendent of agencies. Mr. Bretz's office is in New York, and he has six men on the road in the East.

The Ochsner Hardware Co., of Brule County, South Dakota, have decided to embark in irrigation, and preparations for putting down an artesian well are being made. The company own three-quarter sections of land, and all of it will be cultivated and irrigated. A three-acre reservoir will be constructed.

The Weedsport Specialty Co., Weedsport, N. Y., has been incorporated by Alfred Short, Wm. R. Castle and I. D. Brown; to manufacture caskets and novelties. Capital stock, $2000.

The Hotel Savoy, New York City, can boast of the largest French plate-glass mirror in the world. One containing about 174 square feet of glass has recently been set up in the dining room.

BICYCLE ANNOUNCEMENTS FOR 1896.

CRIBB CARRIAGE CO.

The Cribb Carriage Co., No. 329–333 Broadway, Milwaukee, Wis., make the following announcement concerning their bicycle line for 1896:

We take pleasure in announcing that our '96 models, the ladies' and gents' Wisconsin, will be ready for shipment within the next thirty days. We give a partial description of the wheel, and a few of the new features.

We will use 1⅛-inch Mannesman's English Weldless Tubing with ⅞-inch tubing on the rear forks. We will have two heights of frames in the gents' models, 25 and 6 inches, and the scale weight will be 22¼ pounds. We will use the best grade of piano wire swaged spokes and barrel hubs on both front and rear wheel, with spokes attached to the flange instead of penetrating the hub. We use the Plymouth Wood Rim and the new quick-repair Morgan & Wright tire, unless others are specified. Barrel crank hanger with two oil cups, detachable sprockets, front and rear, with ½-inch block chain milled, so as to insure a perfect fit without friction.

We will have an adjustable handle-bar that can be arranged while riding; and adjustable rat trap or rubber pedal. We will also have the special tool bag that is fitted to the frame directly under the saddle, and the tools can be taken out without unstrapping it. The tools, including the wrench, oil can, repair kit, screwdriver and pump will be of the best grade and the latest patterns. T. C. seat posts and Garford saddle. We also have a special fork this year, that will make the wheel very attractive and add to its strength.

We use the best grade of finish throughout with the bright parts nickeled over copper. We also have a special feature this year in the cones and cups. These have a special gun finish, and are manufactured from the very best material obtainable. It is time for agents to secure exclusive territory on the wheel, as we are receiving a great many applications and shall be pleased to hear from the trade as early as possible. We will be glad to send sample wheels for inspection where dealers are in the market for quantities.

WHITE SEWING MACHINE CO.

The White Sewing Machine Co., Cleveland, Ohio, make their bicycle announcements for 1896 as follows:

Specifications. "White" 1896 Model "A."

Frame. High diamond pattern. 1¼ inch, cold-drawn seamless steel tubing, 1⅛ inch top bar. Height 24 or 26 inches, ⅞ inch tubing in rear forks; ¾ inch tubing in rear upright forks. Frame parts. All steel drop forgings, strongly reinforced at connections. Forks. Seamless steel fork sides, gracefully curved, and mechanically reinforced. Double fork crown. Steering head. 9 inches long, 1¼ inches diameter. Handle bar. Cold-drawn weldless steel, tube ⅞ inch in diameter, adjustable to four positions. Our own invention. Handles. Cork or corkaline, white celluloid tips.

Wheels. 28 inches, front and rear. Wheel base. 43 inches. Rims. Built upon wood, made especially to our order. Tires. Choice of Palmer or Vim, single tube. Spokes. Swaged piano wire, 28 in front, 36 in rear. Swaged .080 to .060. Pedals. Grothe, rat-trap or rubber. Dust-proof centers and bearings. Cranks. Special steel, round and tapered, with throw 6½ inches long. Chain. 1¼ inch solid link with hardened rivet and steel centers,

Saddles. Black, very handsome in appearance and especially manufactured to order. Saddle post. Adjustable. Style "T" or direct seat post. Tread. 5 inches. Sprocket wheels. Both detachable, steel drop forgings, hardened. Front sprocket overhangs crank bracket, bringing chain directly over the ball race. Gear. 68 regular; 64 or 72 furnished if so desired. Bearings. Made of best selected high-grade tool steel, carefully tempered and dust-proof. We show a far superior construction of the crank bearing than ever before used. Patent applied for. Hubs. Large tubular hubs, made from solid bar steel.

Furnishings. Tool bag, wrench, oiler, pump and repair kit. Saddle and tool bag in black leather. Finish. Handle bar, hubs, sprocket wheels, cranks, pedals, seat post, spokes, screws, nuts and washers, nickel plated over copper. Remainder is enamel.

Weight, 22 pounds with fittings, price $100.

Specifications. "White" 1896 model "B."

Frame. Double bar drop pattern, 1¼ inch cold drawn seamless steel tubing, 1⅛ inch top bar, ⅞ inch tubing in rear forks and ¾ inch tubing in rear uprights. Height 22 inches. Frame parts. All steel drop forgings, strongly reinforced at connections. Forks. Seamless steel forksides, gracefully curved and mechanically re-inforced. Double fork crown. Steering head. 9 inches long, 1¼ inches diameter. Handle bar. Cold drawn weldless steel tube, ⅞ inch in diameter, adjustable to four positions. Our own invention. Brake will be furnished with stationary bar when specially ordered. Handles. Cork or corkaline, white composition tips.

Wheels. 28 inches, front and rear. Wheel base. 43 inches. Rims. Kundtz, triple re-inforced wood rims. Tires. Choice of leading tires. Spokes. Swaged piano wire, 28 in front, 36 in rear, swaged .080 to .060. Pedals. Grothe or Brandenburg, rat-trap or rubber. Dust-proof centers and bearings. Cranks. Special steel, round and tapered, with throw 6 inches long. Chain. ½ inch solid link with hardened rivet and steel centers.

Saddles. Sager saddle in black leather. Saddle post. Style "L" or direct seat post. Tread. 5 inches. Sprocket wheels. Both detachable, steel drop forgings. Front sprocket overhangs crank bracket, bringing chain directly over the ball race. Gear. 60 regular, and higher gear furnished if desired. Bearings. Made of best selected high-grade tool steel, carefully tempered and dust proof. We show a far superior construction of the crank bearing than ever before used. Patent applied for. Hubs. Large tubular hubs, made from solid bar steel.

Furnishings. Tool bag, wrench, oiler, pump and repair kit. Saddle and tool bag in black leather. Finish. Handle bar, hubs, sprocket wheels, cranks, pedals, seat post, spokes, screws, nuts and washers, nickel plated over copper. Fork crown in white enamel with gold edge, Remainder in black enamel.

Weight, 23 pounds with fittings, price $100.

RICHMOND BICYCLE CO.

The Richmond Bicycle Co., Richmond, Ind., give the following specifications of their Richmond Road Wheel for 1896:

Weight, 23 to 25 pounds, price $100.

Frame. 24 inch diamond frame, finest quality 1⅛ inch seamless steel tubing, forged steel connections. 23, 25, 26, 27 inch frame when specified.

Wheel. 28 inch. Spokes. Cold swaged steel, nickeled. Tires. Morgan & Wright, or New York single tube, Palmer, G. & J., Webb, Dunlop, and other detachable tires. Rims. Wood, finest natural finish. Chain. ½ inch steel, Humber pattern, hardened rivets. Dust-proof, rat-trap or rubber. Crank. Round pattern, special steel, 6½ inch throw. Handle bar. Assorted shapes.

Saddle. Best quality. Hubs. Barrel. Handles. Cork,

Digitized by Google

Gear. 66½ or 68 regular. Other gears to order. Sprockets. Detachable front and rear. Tread. 5 inch. Finish. Finest black enamel. Tool bag, with air pump, oiler, wrench, and repair outfit.

W. H. WILHELM.

W. H. Wilhelm, Hamburg, Pa., in making announcement of his "Special" bicycles for 1896, says: "The wheel described in this circular is put on the market for that class of jobbers, wholesalers and dealers, who must have a wheel thoroughly reliable and up to date, both in design and finish. A wheel on which they can place their own name plate. This feature enables our customers to place the wheel in the market as a special, giving them an opportunity to meet the close competition brought about by numbers of beginners entering into this line of business, and carrying on the manufacture of bicycles without knowing the cost of production, or basing their cost on their retail price of the wheel, forgetting that to sell in large quantities necessitates the quotation of very close figures, as well as the manufacture at a short margin." In his brief he says:

'96 Special Gents' Wheel: Wheels, 28 inch front and rear, 36 spokes each wheel. Hubs, turned from bar. Spokes, swaged piano wire. Rims, one piece wood. Tires, M. & W. Bearings, cones and cups turned from best steel, tempered. Balls, Simonds, perfectly true. Frame, best seamless steel tube, 1⅜ inch head, 1⅛ inch bottom, 1 inch top and 1 inch cross tube, bottom braces ¾ inch, back braces, height of frame 23 inches, head 9 inches. Sprocket, machine turned and milled. Rear sprocket, detachable, screwed on hub and held in place by a nut screwed on reverse way. Crank axle bearings, improved dust-proof. Pedals, best dust-proof rat-trap. Crank, best forged steel, very light, 6¼ inch throw. Handle bar, best seamless steel tube, properly curved. Chain adjustment, eye bolt with adjusting nut. Saddle, Sager. Chain, ½ inch, hardened. Gear, 63 or 64 inches. Finish, sprockets, fork crown and usual bright parts nickeled on copper, balance black baked enamel. Weight, 23 pounds. We use best forgings and sheet metal fittings, all being thoroughly brazed together.

'96 Special Ladies' Wheel: Wheels, 28 inch front and rear, 36 spokes each wheel. Hubs, very light, turned from bar steel. Spokes, swaged piano wire. Rims, one piece wood. Tires, M. & W. only. Bearings, made with great care, turned from bar steel and tempered. Balls, best make Simonds. Frame, double parallel tube, best light guage, seamless steel. Sprocket, best steel, machined. Chain, ½ inch, hardened. Gear, 60 inches. Rear sprocket, hardened steel, detachable, screwed on hub and held in place by a nut screwed on reverse way. Crank axle bearings, improved dust-proof. Pedals, best dust-proof rat-trap or rubber. Cranks, 6½ inch throw, very light, best forgings. Handle bar, bent just right, adjustable for height, upturned. Saddle, Sager. Weight, 26 pounds. Finish, enamel and nickel. Chain adjustment, eye bolt with adjusting nut. Grips, cork or cork and rubber. Suitable chain and dress guards fitted to this model. Price on application. Name plates not furnished. These machines are designed especially for jobbers and dealers who wish to use a plate of their own.

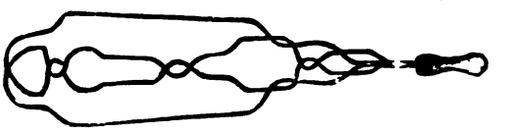
The White Gate Co., consisting of Messrs. Glossblenner, Bell and White, have decided to locate their large plant in Franklin, Ind. Office room has been secured and the factory will be built as soon as a suitable location can be secured. The company will manufacture farm gates, and the factory will give employment to a number of workmen.

Notice has just come from the judges of the Mechanics' Charitable Association of Boston, announcing the award made the Bissell Carpet Sweeper Co. of a special diploma confirming the silver medal award made in 1892 for continued excellence. This is the highest award granted on carpet sweepers.

Hardware Dinner of 1896.

As was previously announced, it has been decided that the Hardware Dinner of 1896 should be given early in the year named, and a committee having the entire matter in hand has been appointed by Peter McCartee, president of the New York Hardware Club, as follows:

Alfred D. Clinch, chairman.
Eugene Bissell.
Brace Hayden.
James H. Kennedy.
George H. Sargent.
Edward C. Van Glahn.
John L. Varick.
Richard R. Williams.



The date upon which it is to be given is Thursday evening, February 20th, at the Hotel Savoy. Sub-committees on speakers, etc., have been appointed, and arrangements are already under way to make it a success in every respect.

Hartley & Graham Enlarging.

Hartley & Graham, of New York, owners of the Gun Implement Co., which has occupied the Ornamental Wood Co.'s factory on Elm Street, Bridgeport, Conn., for the past eight years, have purchased that property from Charles W. Spooner, Lily T. Spooner and Harry C. Spooner. The property has a frontage of 215 feet on Elm Street, 90 feet on Harrison Street and about 29 feet on Fairfield Avenue. The owners will erect immediately a large addition at Elm and Harrison Streets, which, with other improvements, will give them a model establishment. They do not intend for the present at least to manufacture bicycles at the works of the Implement Co., but the regular business in gun implements, Forstner bits, and bicycle sundries, has grown to such proportions that they have found it advisable to have permanent and increased facilities.

The Champion Beater.

The Champion Beater Co., No. 2 Stanton Street, New York, have recently introduced a novelty in their Champion Beater, illustration of which is here given. It will no doubt prove a great boon to housekeepers. It is designed for the purpose of cleaning clothes, carpets, rugs, furniture, furs, velvets, plushes and draperies, and it is claimed will not in-

jure the most delicate fabric. It is constructed of wire with a wooden handle and should be used as a switch. The spring being in the handle causes it to rebound the article beaten, allowing the dust to escape. It is described as being light, neat and attractive and never needs cleaning, also that it will not rust. Price No. 1, for light work, 25 cents. No. 2, for heavy work, 50 cents.

The Gillette Success in England.

The Gillette Clipping Machine, manufactured by the Gillette Clipping Machine Co., New York, has met with a phenomenal success in England, under the management of M. G. Gillette, with headquarters at No. 46 Gray's Inn Road, W. C., London. It has already been adopted in the royal stables at Windsor Castle, the royal mews at Buckingham Palace, and those of many of the most prominent huntsmen and breeders in England, and it is needless to call attention to the fact that there must be real merit in an invention that has so rapidly acquired such great popularity in conservative England. The high merits of the machine were long since recognized in this country.

ADVERTISING A RETAIL STOCK---I.

This department is conducted by an experienced advertising man. It will be devoted to questions of profitable publicity as especially related to the retail Hardwareman

We desire to make it of practical benefit to the readers of "HARDWARE," and to that end invite you to ask any questions on advertising, make any suggestions, or send in your ads. for criticism. We will do our best to make the path of advertising easy for you.

December is the business man's thinking time. He then reviews his own successes and failures for the year that is past, and plans for the year that is to come. He notes the successes of others, and seeks the causes, that he may profit by their experience. He gleans from the whole broad field of business, that he may gather suggestions for his own particular branch.

There never was a time when it was not necessary for the business man to tell others what he has and what he is doing. Many and costly experiments have proven that newspaper advertising is the surest, quickest, cheapest, and therefore best, means of doing this.

Mr. Hardwareman, this applies to you. What has helped others to succeed will help you. There never was a business man started that advertising would not help. Your opportunities are just as many as anyone's, and a good many more than some people's. Your goods are staple. People need your stock. But their need of the things in which you deal, is no sure sign that they will buy them from *you*.

You don't believe in advertising? You try to arrange your window display in a tasty and attractive manner, don't you? Why? To catch the eye of the passer-by. That's a sort of advertising, good as far as it goes, but not one-quarter of the people whose trade you want ever go by your store. They do read the newspapers. Those who don't, are not the sort of customers you care for. "An advertisement is a thing that represents a business man's goods and business at a place where the man and his goods are not." That's what you need. Something that will tell John Smith, on the other side of town, that you have just the hammer, or saw, or stove, in your store that he wants, at just about the price that he is willing to pay for it; that will *convince* the Widow Jones, who lives just out of town, that your new supply of window fasteners is cheap and burglar-proof. The newspaper goes everywhere; it can carry your business everywhere.

An advertisement in your home paper will do more than this. It will create a demand for what you advertise. This is not theory, it is proven fact. If, after the first fall of snow, you announce a sale of snow shovels at a moderate price, a good many people will conclude that they had better have one, who thought before that the old coal shovel would do.

In nine cases out of ten you find your bitterest and most persistent competitors in the department stores. Their ads. occupy the largest and most prominent place in the local papers. You cannot afford to use such space—your business does not justify it—and so you don't use *any*. That's wrong. A smaller ad. will be seen and read or caught at a glance in its entirety, if it is well written, carefully set up and changed often enough. For proof, ask your wife if she reads small ads., and see the success of the patent medicine advertising. What at first seems a disadvantage is really an opportunity. Your ad. may be small in comparison, but it is all about one thing—Hardware. All its force is focused on that—and strength will carry conviction.

"Advertising costs too much." Advertising is not an expense, it is an investment—an investment that pays big dividends if rightly and carefully done. Buy your space in the papers that go to the people whose trade you want. Then put as much care on what goes into that space, as you do on buying your stock. Don't expect an ad. to clean out your store in a day or in two days. Be fair; give it a chance; very few investments pay at first.

Hardware advertising is an all-the-year-round subject. There is something in your stock for every change in the season. Just now the thoughts of most people are centered on Christmas and Christmas gifts. Take advantage of this, and announce the skates, knives, razors, sleds, chafing dishes, cutlery, etc., you have on hand. It will help the present and serve as a foundation of popularity and success for the future.

Here are a few suggestions:—they are yours, if you care to use them:

MAKE MOTHER HAPPY

this Xmas and give her one of our neat chafing dishes. 'Tis the secret of easy supper-getting. Happiness for $1.00.

EVERY WOMAN LOVES

a secret. The secret of easy supper-getting is a chafing dish. Get mother one for Xmas. $1 up.

IT'S A POOR SORT OF A BOY

that would not be pleased with a pair of our $1.00 skates this Xmas. All clamp and made of the best steel. Others for a little more.

SHARP SAYINGS

are always appreciated—so's a sharp razor. Wouldn't father like one this Xmas? All prices. Sure cure for profanity.

JOHN JONES,
MAIN STREET.

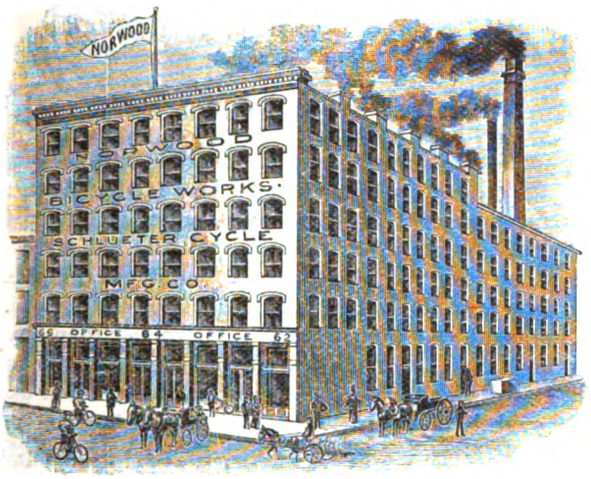
Our prices on these necessities you will find to be low—the lowest in town for the quality offered.

CHRISTMAS CUTLERY

should be in keeping with the rest of the table appointments. Look over our stock—then buy somewhere else if you want to.

ARTHUR B. CHIVERS.

Charles Disston, brother and business partner of the late Henry Disston, founder of the extensive Disston Saw Works, died at his home in Philadelphia on Saturday, November 30th, at the age of seventy-two. He came to this country from Nottingham, England, in 1849, and became associated with his brother in the saw works. He retired from active business about three years ago.



The American Wire Nail Works, Anderson, Ind., have closed down indefinitely, owing to the scarcity of steel billets; 650 employees are thrown out of work.

The St. Clair Stove Co., Kansas City, Kan., has been incorporated, with a capital stock of $8000.

Schlueter Cycle Mfg. Co.

The Schlueter Cycle Mfg. Co., Cincinnati, O., manufacturers of the "Norwood" bicycle, have made preparations to largely increase their 1896 output. The company are not new to the business of manufacturing, having had several years experience in this line. F. H. Schlueter, from whom the company takes its name, previous to his venture in the bicycle business, was engaged in the sewing machine business. The knowledge acquired in this manner he has been able to turn to good account in the manufacture of cycles, the two trades being so similar. The company's factory, which is herewith shown, came from small beginnings, but is now one of the foremost, having a capacity of over 7000

wheels per year. The company are prepared to make prompt deliveries throughout the whole season. The illustration accompanying shows the "Norwood," the wheel turned out by the company. They explain that the special features worthy of mention are strength, durability, advanced mechanical features, workmanship, finish and appearance. They also guarantee to keep their wheels in repair for one year. The following are the specifications of the "Norwood": Frame, diamond, finest quality seamless steel tubing and steel connections; 1⅛ inch tubing in main frame; head, 1¼ inch tubing; bottom tubes of rear fork, ¾ inch tubing; upper tubes of rear fork, 11-16 inch tubing. Reinforced at every point requiring extra strength.

Wheels, 28 inches; 32 spokes in front and 36 in rear wheel. Wheel base, 44½ inches. Forks, seamless steel tube fork-sides and double fork crown made of sheet steel. Handle bar, raised, straight or dropped handle bars, at option. Handles, corkaline, with black composition tips. Tread, 5 inches. Gear, 60, 64, 68 or 72, at option. Pedals, Brandenburg combination rat-trap or rubber. Saddles, Norwood, with Tee seat post. Chains, best Humber, ¼ inch. Rims, carefully selected and seasoned second growth stock. Spokes, cold swaged, from best quality drawn steel. Tires, choice of Palmer, G. & J., or M. & W. tires. Weight, 19 to 24 pounds, according to fittings.

Second Sportsmen's Exposition.

The rules and regulations governing the Second Annual Sportsmen's Exposition which will be held at the Madison Square Garden, March 16th to 21st, inclusive, have made their appearance. We give here some of the most important.

"Character of Exhibits. It being the intention to make this exposition exclusively an exposition of sportsmen's goods, the Madison Square Garden Co. reserve the right to decline and prohibit any exhibit, exhibitor, or proposed exhibitors, or exhibits not approved of by the Exposition Committee, and to permit only such matter and conduct as shall be approved of by the Exposition Committee. The above reservation covers persons, things, conduct, printed matter, souvenirs and emblems, and all things which affect the character of the exhibition; information, submission of proposed matter or conduct to be made to Frank W. Sanger, manager of the Sportsmen's Exposition, Madison Square Garden. Exhibitors have the right to distribute approved of catalogues and price lists, only from the space occupied by them. Application for special privileges, such as advertising, souvenirs, etc., together with a sample of the same, must be submitted to Frank W. Sanger, not later than February 10th, 1896."

"Bureau of Information. During the show, and for three days prior thereto, a representative of the Executive Committee of the Sportsmen's Association will, at all times, be at the Bureau of Information, located in the main lobby, where information on any point may be obtained."

"Insurance. The Sportsmen's Association or the Madison Square Garden Co. shall not be held responsible for the safety of the exhibits against robbery, fire, accident, or any other destructive cause. In all cases the exhibitors must insure their own goods."

"Signs, Railings, Decorations, etc. Show cases with blank backs requiring high partitions must be placed as far as possible in the space at the sides. Where show cases are not used, space partitions must not be over four feet high. Signs will not be allowed over three feet in height, and must be placed at least seven feet from the floor. Exhibitors are allowed to build platforms six inches high covering their spaces, and surround the same with railings thirty-one inches high on front and sides."

"Writing-room. There will be a writing-room provided, in which business correspondence can be carried on with facility."

"Special Admissions for the Trade. Any dealer in Sportsmen's Goods, manufacturer or exhibitor or employee of exhibitor will be admitted to the Garden free from 9 A. M. to 1 P. M. by giving his name and address at the Bureau of Information when entering."

The diagram of the exhibition spaces has been drawn up, and the spaces are ready for allotment.

Sargent & Co., New York and New Haven, in their calendar postal for the present month, say: "December 1st is Sunday, but you can commence bright and early on the second to make money with the Eclipse Door Check and Spring—this is a good month to sell them. The Eclipse not only closes doors noiselessly, preventing drafts, but it is easy to sell and it pays well. All your neighbors should have them in use, but they haven't. We will furnish advertising matter if you want it."

The Detroit Car Axle Lubricator Co. has been incorporated in Detroit, Mich., with $60,000 capital. The stock is held by Arthur W. Wright, Luther S. Trowbridge, William Woollatt, E. W. Pendleton, Jane P. Williams and John B. Wright.

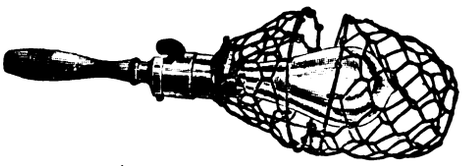
The Sager Pneumatic Saddle.

"A pneumatic saddle," says a high authority in the bicycle world, "is relatively as essential to a rider's comfort and pleasure as the pneumatic tire, and is fully as great an improvement as is the latter over the old solid or even the discarded cushion tire."

Many efforts have been made to produce an absolutely practical air cushioned seat, and there is one inventor who feels that he has at last reached the ideal. For a long time, J. H. Sager, of Rochester, a pioneer bicyclist, and superintendent of the Sager Mfg. Co., has been working on the

idea of air chambered seats, and at last has invented a saddle which, it is explained, "fills the bill." "Pneumatic in principle, it is unlike any other effort. The Sager Pneumatic Saddle is so made with separate chambers that the air cannot roll underneath the rider. This rolling and shifting about of a single chambered seat caused so much friction as to produce the inevitable 'burning sensation' which riders have complained of. With separate air tubes this will not occur, and the lacing of the Sager Pneumatic between the chambers will also prevent the slightest pressure on the prostate gland. Another feature to keep the saddle cool is in the placing of two circular holes in the rear portion of the seat. They are so placed as to receive the bones which rest on the saddle, contributing further ease, and also aiding the rider to maintain a correct position. Among all riders who have ridden the Sager Pneumatic, and particularly with the women, infinite satisfaction has been expressed. The Sager Ladies' Pneumatic is shorter in length and broader at the cantle than the gentleman's Pneumatic. Every saddle is a model of perfection. The best quality of rubber tubing is used. The leather covering is carefully formed to the shape, which after repeated trials has been found most satisfactory, and being laced on, can be easily removed. The wooden base of the



saddle is three-ply veneer and thus rendered practically unbreakable. By reversing the spring, the forward or back adjustment is given, a feature of especial value when the direct post is used."

The Waltham Mfg. Co., makers of the "Orient," have adopted the Sager Pneumatic to be used exclusively on every one of the 8000 wheels to go from their factory in 1896. This is the first instance where a maker has exclusively adopted a pneumatic saddle since such a seat first came on the market fifteen years ago. As further proof of the Sager Pneumatic, the Union Mfg. Co. and R. H. Wolff & Co., makers of the "Viking" and the "Wolff-American" respectively, also the Humber Co., have ordered largely of this saddle.

Electric Light and Lamp Guards.

Edward Darby & Sons (Pennsylvania Wire Works), No. 233 and 235 Arch Street, Philadelphia, make the following announcement: "We are now ready to supply the trade with the Enterprise Patent Electric Light and Lamp Guard, of which we are the sole owners and manufacturers. This guard is a great improvement over the old style guards, being more easily attached around the socket and requiring no brass ring for that purpose. It is made of steel wire, twisted, afterwards tinned, soldering all the twists together, and made with a hinge and clasp in the middle so that you

can get at the glass globe to clean or put a new one in, without detaching the guard from around the socket, which has to be done in the old style guards that have a brass ring attachment. We have seen and know by experience that the screws in the brass rings on the old style guards drop out from the vibrations of buildings and the globe works out of the socket, falls to the floor and breaks. This is impossible with our guard. It is stronger than any guard in the market, and very neat in appearance and has given better satisfaction to firms, that have put them in use, than any of the old styles which they have tried. The price of this guard is lower than any of the old styles which have been used by some of our factories, steamships, etc. It will pay you to write for a sample guard and our price before purchasing elsewhere. When ordering goods please state socket." The accompanying illustration shows the construction of the guard.

The Dean Specialties.

Henry E. Dean & Co., Worcester, Mass., are introducing an Ash Sifter as here shown. It is made from heavy wire cloth, and is galvanized after being made to render it rust proof and durable. The sifter is furnished with a barrel cover which shuts down over a barrel used to prevent the dust from flying.

They are also introducing the Wire Hens' Nest illustrated herewith. The nests are made from heavy steel wire,

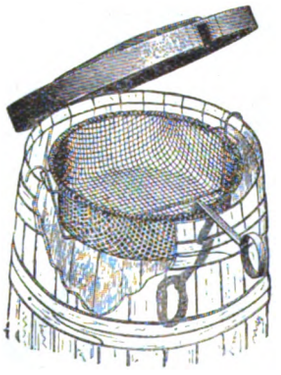


FIG. 1.—DEAN SIFTER.

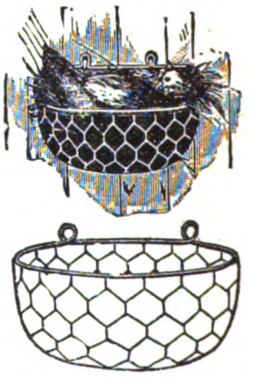

FIG. 2.—WIRE HENS' NEST.

japanned, and are large enough, it is stated, to accommodate any hen. The advantages claimed for the nests are that they are easily cleaned, that there is no possible chance of vermin collecting on them, and that they can be attached to the building anywhere, and taken down easily.

"Our Xmas Offer," in heavy gold lettering, is on the cover of an artistic announcement just received from the Bissell Carpet Sweeper Co., Grand Rapids, Mich. It sets forth fully the remarkable offer made in full in our issue last preceding. Dealers who wish to keep up with the procession, should send for a copy immediately.

Defiance Bicycle Co.

The Defiance Bicycle Co., Defiance, Ohio, have one of the finest factories in Ohio, filled with the very best and latest improved bicycle machinery. They call attention to the fact that they employ workmen thoroughly skilled and away up in the art of bicycle making, and that they are devoting all the energies of skill and money to the manufacture of a first-class line. The name of their bicycle is the Wheeler, named after their vice-president. They have made the price of the wheel but $85, and feel justified in the claim that "the Wheeler is the peer of any wheel on earth, no matter what the price." They add: "One feature of our wheel is our detachable crank-shaft (our own invention, patent pending), which is pronounced by experts to be the best thing out. By simply removing one screw, the crank-shaft can be taken out and replaced without disturbing the adjustment in the least. Any wheelman will readily appreciate this advantage." Full particulars will be found in the new catalogue, which will be sent on application.

Cyclists' Road Machine.

R. K. Teller, of the Tie Co., Unadilla, N. Y., has invented the Cyclists' Road Machine as shown in the accompanying illustration. The device is designed to make paths for bicyclists in small towns. It is stated that it makes a path thirty inches wide by running over the ground once,

removing all obstructions, and pulverizing the ground with a cross rake, the ground being made by a scraper which follows. It is further remarked that the machine runs but little harder than a lawn mower.

The machine is intended for sale in towns and to be paid for by subscriptions of the riders, the labor for running the same to be paid in the same way.

The manufacturers claim that it will make perfect roads, and help the sale of bicycles in country towns where there are no pavements.

J. Van Valkenburg & Sons, Huntsville, Ala., have changed their name to Van Valkenburg & Matthews, the partners being the same as before, W. R. Van Valkenburg and Luke Matthews. They have moved into their new building, which is three stories high, with cellar, each floor measuring 50x150 feet. They handle Hardware, implements, wagons, buggies, harness, guns, paints, oils and builders' goods. They have two men on the road, and expect to do a $250,000 business in 1896.

The Enterprise Junior Feed Grinder, illustrated and described in the recent issue of HARDWARE, is manufactured by the Enterprise Mfg. Co., Columbiana, Ohio, instead of Columbus, Ohio, as stated.

Bean & Lang, Fond du Lac., Wis., manufacturers of United States Cyclometers, have been succeeded by the United States Mfg. Co., who will carry on the same business.

Review of the Markets.

Hardware: There is a general slacking of trade owing to the near approach of the holiday season, and the time for the general stock-taking. Dealers are consequently averse to adding largely to their stocks, which in some lines are ample for all needs. There is some impression that prices are going to pieces, but this is an erroneous idea. Reductions in prices have only been made on lines on which advances were made too rapidly. On the whole, a cheerful feeling pervades the market, and a fine trade is confidently anticipated after the opening of the year. Millions of dollars have been spent in building and improvements in New York this season, and builders' Hardwaremen have reaped their share of the profits, that branch of the business having been exceptionally good recently. Shelf Hardware is also having a run.

Linseed Oil: New York prices are unchanged and are as follows: Raw 42 cents per gallon, boiled 45 cents per gallon and Calcutta raw 48 cents per gallon.

Cut Nails: Prices are unchanged and are here given: Carload lots, f. o. b., Pittsburg, base, $2, with the following advances on former delivery prices: 2½ cents to Chicago; 3 cents to New York, Philadelphia, Baltimore and the Southwest; 3½ cents to St. Louis, New Orleans, Mississippi River points and New England. The delivered price on small lots of Cut Nails is 10 cents more at any point than carload lots at the same point. The following are the New York prices: Carload lots on dock, $2.18; small lots on dock, $2.28; small lots from store, $2.30.

Wire Nails: There are no manufacturers of Wire Nails of any great importance outside of the Association, consequently that organization is in better condition than ever to maintain prices. It is even hinted that there is a concerted action between the Association and the National Hardware Association with that object in view. The increased inquiries indicate that stocks in the hands of dealers have been broken up and that they are now in a condition which necessitates their purchasing. It was thought that the price of Wire Nails might be reduced at the recent meeting of the manufacturers held in Cleveland, but it was settled that no change should be made. We quote as follows: Carload lots on mixed cars $2.25 per keg base, f. o. b. Pittsburg, less than carload lots, $2.35 base, f. o. b. Pittsburg. The New York prices are for carload lots on dock $2.43, and small lots from store $2.53.

Tacks: Business is brisk, but the movement that characterizes the market is not credited to the new discount sheet. The discount on Standard weights (***), as announced in our recent issue, 10 and 15 per cent. extra, should be changed to 10 and 5 per cent. extra.

The prices quoted below are for small lots. Round lots except Tobin Bronze, can be purchased at lower prices:

Clapp & Co., bankers and brokers, New York, in their weekly letter, say: "Forecasting markets with facts alone as a guide, is the idle work of many busy men. Conclusions based on what is known, may seem like foreknowledge, but be misleading as a desert mirage. The ocean's

Digitized by Google

upheaval from unknown depths easily overwhelms the visible waves and currents. Public sentiment is such an unsounded depth. When its demonstrations are uplifting, optimistic and speculative, it carries theories and facts like driftwood on its rising waves. Straws.—Seventy Americans have an estimated aggregate wealth equaling $37,500,000 each or $2,625,000,000. These fortunes will form a tower of strength in the development of the gigantic enterprises of the twentieth century now near at hand. Sales of mining shares in Colorado Exchanges indicate the fever of speculation is not dead or dying. Gold output of Colorado now estimated at one million daily. A South African mining authority estimates total product all mills in Witwatersrand district from discovery to June 30th was 7,651,935 ounces or equal to $158,165,497. United States mints stopped all coinage of silver dollars recently. The standard silver dollar is worth now about fifty-three cents gold. United States mints continue coining the gold reserve bullion long held sacred and in trust. United States blast furnaces are turning out pig iron at rate of 11,500,000 to 11,750,000 tons per annum, breaking all records and exceeding consumptive demand. Eleven Southern States mined 28,321,608 tons of coal in 1894, or more than twenty times the product of same States twenty years ago. Exports of manufactured goods nine months of 1895 were $155,793,586, against $133,378,609 a year ago. It is to be hoped the coming Congress will arrange to meet the government's ordinary expenses by protection to American industries, rather than aid aliens to get our gold and displace our laborer by filling our markets with foreign-made goods."

THE PHILADELPHIA TRADE.

The holidays are now nearly upon us, but the cold weather, which is always so ardently desired in order to move holiday goods, has not made its appearance. and beyond a few frosts the temperature has been unusually mild. Despite this, holiday goods, such as Sleds, Skates, Tool Chests, etc., are moving fairly. There is no doubt that the demand for all these goods will be greatly quickened, and we hope this will arrive in the next few days.

Prices continue without important changes, unless we except Barbed Wire, which is now quoted at lower figures, owing, we understand, to a fight among the Western manufacturers.

At the date of this writing no change has been made in Nails, which are moving in fair volume, as Nails will always be used, no matter what the price may be.

Collections can hardly be called fair, as they are still halting and irregular, although an improvement has been noticed in the last few days. BIDDLE HARDWARE CO.

THE COLUMBUS TRADE.

Trade is holding up well on general Hardware and seasonable goods, such as skates, sleds, axes, cross cut saws, etc. On goods that have been too high, such as nails and wire, buyers are very cautious, and we think retail dealers allow themselves to get entirely out of such goods for fear they will have some stock on hand, and a decline in price come. Wire has taken quite a drop, and we think present prices are not high, and dealers can buy with a reasonable degree of safety for their wants. Nails are too high, and cannot stay at the present price, and there is no reason why they should. We hope to see the price reduced to where it will leave the manufacturer a fair profit, and then remain at a steady price for months. It will help the building Hardware trade very much if a reasonable decline takes place in nails, steel beams and girders before spring trade opens up. The worst demoralized article we know of at present is wire cloth. This is one of the articles where the retailer makes all the profit, and he is to be congratulated. If we are not badly mistaken, we can give the reason for the present condition of the wire cloth market. It is on account of the pernicious practice of jobbers booking orders for such goods six and even eight months before the retailer needs them. If jobbers would only discontinue this unwise practice, it would be beneficial to the retailer as well as themselves. It is not uncommon for jobbers to begin soliciting orders for next season's goods before the present season is over. And very often the retailer buys more than he can dispose of. It takes but a few days to deliver goods from the near-by jobber to the retailer, and if they would consult their best interests they would refuse to buy any goods six or eight months before they need them. Thirty to sixty days is ample time. They lose more times than they make when they buy so far ahead. And then there is often something new put on the market that would suit their trade better, and at as low, if not lower price than that at what they bought. By postponing their purchases until about the time they need the goods, they have ample opportunity to get posted both on prices and goods. This is one of the important things in the Hardware business. We hope the day is not far distant when this demoralizing practice will be a thing of the past. SMITH BROS. HARDWARE CO.

THE PITTSBURG TRADE.

The long deferred rise in our rivers occurred last week, and let out a part of the coal which has been detained in our harbor for months. This will start up the idle mines in the Monongahela Valley, and put money in circulation along that river.

The local demand for Hardware is only fair. A better demand for cutlery is noticeable, as is usual at this season of the year. Collections are about up to the average, although some sections are very backward.

The short-lived "boom" in the early part of 1895 has spent itself, and we are now resting for what we hope will be a more permanent activity, to begin after the turn of the year. LOGAN, GREGG & CO.

THE TOLEDO TRADE.

Trade in this section for the last month has been fair.

The demand for builders' Hardware has been very good, considering the time of the year, such goods as stove pipe, coal hods and stove trimming having been at fair demand, although we notice quite a falling off of orders for nails and wire.

Dealers in general are carrying a well assorted stock, but we think they are not overloaded.

Collections have been good in some localities, and in others they have been quite slow. We notice the tendency of the jobbing trade is to look closer to their collections, and not give too long time on invoices. Glass has also been in very good demand. Paints have not sold as well.

We are having a cold snap at present, which is good for the sale of skates, sleds and sleigh bells, and if we have considerable snow it, no doubt, will move off a good many axes and cross cut saws.

We are not anticipating a very heavy trade this winter, owing to the fact that the farming community have very little to sell, and what they have got brings a very low price, potatoes being sold as low as twelve cents per bushel in some sections of our territory.

We are looking for a good trade for next spring, although we do not anticipate the *high prices* that some manufacturers seem to think they will be able to get. People in our section are generally all employed; we do not hear of many people being idle, and this fact leads us to believe that we will have a fair Christmas trade.

STOLLBERG & CLAPP CO.

THE CLEVELAND TRADE.

The trade during November has been somewhat better than for the few months previous, and we feel encouraged to believe that the improvement thus shown will continue after the beginning of the new year.

The break in values of Pig Iron, etc., is commencing to

Digitized by Google

show its effect upon some of the leading staples, such as Barbed Wire, etc., but has not yet affected Nails.

Seasonable goods are moving in reasonable quantities, but we anticipate an early closing down of orders. There is much more inquiry for Bicycles than was the case at this time last year, as dealers have learned from their experience of 1895, that it will be a wise thing for them to make provision for the future while they have an opportunity.

Many jobbers are not provided with stocks so as to be able to fill their orders, and while there is a promise of a very large output of Bicycles, we feel confident that many of them will not get on to the market until after the proper time. Even the older and better established factories are finding that they cannot make shipments as early as they had originally expected, and orders placed for shipment in November with every expectation that they would be promptly filled, have not yet been executed. This is a fair indication that the trouble which existed last year will probably be repeated during 1896.

We have been enjoying some good rains within the last two weeks that improve the situation very considerably, and the weather as we write is much more seasonable than is usually the case at this time, the thermometer standing as it does at about fifteen above, with a good fall of snow on the ground. McINTOSH-HUNTINGTON CO.

THE DAVENPORT TRADE.

Although many mills joined the Wire Nail Association at the last meeting, prices are still unsteady and a lack of confidence in the market is manifested.

The disbandment of the Barb Wire Association was a surprise, coming as it did in the same week of the wire nail love feast, as many were interested in both associations. A private letter from a prominent manufacturer announces that there is a strong inclination to get together again, fix up matters and reorganize the association. This should be done promptly, as the prices fixed by the association were fair and apparently entirely satisfactory to the trade; notwithstanding the temporary war on prices, there is but little selling.

Trade has been very good in snow shovels, skates, hand sleds, sleigh bells, axes and other seasonable goods, but general trade is light. Collections are exceedingly slow, and many houses are asking for extensions and quite a number have gone into liquidation.

Work on the new government bridge is progressing satisfactorily. The citizens stock subscriptions for the new railroad is nearly taken and it is believed that building will soon commence. It is understood that this means another railroad line into this city.

The decline in prices will reduce the stock footings on the annual inventories to a point that may make the final balances for 1895 on the wrong side of the ledgers.

Will the wire nail prices be kept to a point that will again invite importation? How does the trade like the no case and cartage regime? In Davenport we have not been able to add the costs of packing and draying to the selling price of goods, as was predicted we could do, by some of the smart dealers who were at one time so proud of the temporary glory achieved by the announcement that they would discontinue this charge.

Now that the National Hardware Association has met and broken bread, will the lamb and the lion lie down in peace together, or will they go home and lie more selfishly than before? SICKELS, PRESTON & NUTTING CO.

THE GRAPHITE TRADE.

Business for November has been so steady and devoid of special features that it is difficult to communicate anything of more than ordinary interest, other than that all the graphite products have not kept the pace as to sales, crucibles having far outstripped previous records—while pencils and lubricants do not equal the average.

The sharp buying for holiday trade always affects pencil sales, as they are not in any sense holiday goods, and the close of the bicycle riding season reduces the demand for chain lubricant sufficiently to cause a smaller showing in the lubricating graphite totals.

Compared with November of the prosperous year—1892—business is highly satisfactory and the year promises strongly to be a banner one, with a plentiful supply of orders over.

The promptness of remittances should please the most exacting. JOSEPH DIXON CRUCIBLE COMPANY.

THE OMAHA TRADE.

Trade for the past week has shown a fair degree of activity for the season, and this in part must be attributed to the winter weather prevailing, which has improved the demand for Skates, Sleds and other seasonable goods. This is a season when little activity is expected, as stocks are being shaped for the annual inventory, and considerable complaint is still made by retailers in regard to slow collections and trade. Until the crop of the past year leaves the hands of the farmer at better than present ruling prices, little change can be expected, as under present conditions it has little purchasing and less debt-paying power.

Some complaint is made in regard to prices, particularly on Wire Nails, on which the prices fixed by the pool have not been well maintained by the jobbers. This, no doubt, is caused from the fact that there was a feeling that a reduction in price would be made, but with the old price reaffirmed and the recent guarantee established by the mills, it is to be hoped that jobbers will see the wisdom of assisting in maintaining the market, rather than in the effort to break it.

The break on Barbed and Plain Wire and Staples has not stimulated the demand, but rather killed what little there was, as buyers are anticipating still lower prices, which expectation, however, from a manufacturer's standpoint, is hardly likely to be realized. RECTOR & WILHELMY CO.

THE ST. PAUL TRADE.

We have entered upon the last month of the year, with trade conditions that are as favorable as could be expected when the low prices of farm products are taken into consideration. As a consequence of this last named condition, collections are somewhat slow, particularly with that class of customers who are usually inclined to be slow. The recent action of the Wire Nail manufacturers in reaffirming the price on nails, strengthens confidence in prices of other lines of goods, and will help to round out the year's business in a satisfactory manner. Seasonable goods and goods adapted to holiday trade are moving quite freely. We look for continued activity up to Christmas.

C. W. HACKETT HARDWARE CO.

THE CHARLESTON TRADE.

Trade during November has been unusually good, and the close of the month found a good number of orders unfilled, which has not been the case for three years past. The daily receipt of supply orders shows that our trade is using former purchases, and is in a healthy condition. We have had some difficulty in obtaining needed goods, noticeably axes, that have been and still are in demand. Little complaint can, however, be made of non-shipment of goods by manufacturers, and we have had less trouble in keeping our stock fully assorted than we would have had if we were not so impressed at the opening of the season that a large trade was a necessity, and governed ourselves accordingly. Advances seemed to have reached their limit, and we have no doubt that a decline will be in order, though not serious enough to be a disturbing element in trade. Acting upon this expectation, we are not anticipating probable future wants, but simply ordering in sufficient quantities to meet daily necessities. The year now closing has been one of unusual mercial features, and marked contrast. With-

Digitized by Google

out any seeming reason, the downward tendency of all iron products disheartened the most sanguine, and left none who handled them any profit in so doing. Again, upon equally groundless trade conditions advances were made and being not only accepted but welcomed, were in many lines not only unreasonable but pernicious.

It is a source of congratulation now that consumers were needy and deliveries rapidly made, preventing an accumulation, and in consequence a large stock on a falling market.

While we look for a shading of present prices in the near future, there may be in the new year conditions that warrant the maintenance of present figures or even an advance, but we have no disposition to place advance orders preferring the course above stated.

Collections have been better than we expected, and an examination of accounts very gratifying. We expect to be pressed during the entire month to keep up with current business, and hope to open the new year with only those orders unfilled that are held by instructions as to dates of shipment.

Our travellers are constantly annoyed by representatives of manufacturers seeking the smaller trade, and complain daily of the unfair dealing of many of them. This, however, is so common a complaint that its mention here may be deemed only space filling, but it is a very serious matter with a jobber, and one that should be written about and talked about daily, until a release is had or the jobber is unmistakably informed that he has no rights that a manufacturer is bound to respect. Such an understanding is needed now so that each will understand the other's position and be enabled to act intelligently and protect all interests. MARSHALL, WESCOAT & CO.

THE BUFFALO TRADE.

Trade since our last letter has been on the whole quite satisfactory. Collections have been fairly good, and customers are feeling better.

We are especially busy just at present on account of the good sleighing which we have had for a few days, which has helped trade, as there seems to be a good deal of life and snap to it.

Were it not for the decline in price on some lines of goods, which we regret to see at this particular time, there would be good reason to look for a splendid trade a little later on, but we fear that the depression which now exists may have poor results. We hope, however, that our fears will not be realized, as we desire to see more firmness on all lines of goods. WEED & CO.

The Kingman-Moore Implement Co., Peoria, Ill., has been incorporated by Martin Kingman, C. A. Jamison and Gustave H. Schimpff; to manufacture agricultural implements, etc. Capital stock, $250,000.

THE BARNES WHITE FLYER

Is a Popular and Trustworthy Mount.

IT can boast of more novel features than any machine on wheels. . . . . .

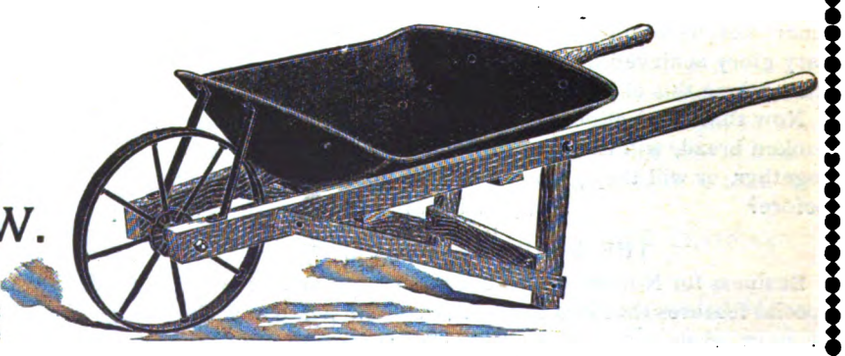
A Leather Tire.

A citizen of the city across the great Bridge has invented a bicycle tire that is made from the best tan sole leather, and two pairs can be cut from a hide. The ends are joined by a bias seam, made perfectly smooth, and the tire is sewn on the inside or portion which fits in the rim. About a foot of this seam is left open and fitted with a lacing, so that the rubber inner tube may be inserted. This is very strongly made, especially at the ends. The leather tire, as constructed, will stand great pressure and can be made almost as hard as an old solid tire if desired. After they are completed they go through a process which makes them water-proof, so that in wet weather they do not get soggy.



Anderson Bros., sheet metal workers, of No. 394 Grove Street, Jersey City, have on exhibition in one of their show windows, a shovel that was made in 1858, by their grandfather, John Anderson. It was made of No. 17 black iron, the handle being brightly polished by the thirty-seven years of constant use which it has had. It has been used for all sorts of purposes, but principally as a fire shovel. In shape it somewhat resembles the ordinary dust-pan, the surplus iron in the back corners being used in making "dog's ears."

Dixon's Silica Graphite Paint, manufactured by the Joseph Dixon Crucible Co., of Jersey City, N. J., will be used in painting all the tin work and skylights of the Post Office Department building at Washington. A quantity will also be used on the Capitol, and the District Government building.

George T. Walker and others will probably establish nail mills at Second and Atchison Streets, St. Joseph, Mo.

PAN-AMERICAN R. R. BARROW.

With Round Steel Spoke Wheel. The most durable, lightest and best barrow made. Used all over the world. Barrows for all purposes.

Bissell Carpet Sweepers.

Now that the holiday season is close at hand and dealers are cudgeling their brains for attractive window displays, the Bissell Carpet Sweepers should not be overlooked, as by proper arrangement an atrractive exhibit of them can be made. The company state that their Christmas offer of carpet sweepers this year has never before been equaled by any manufacturer—at any time—for any purpose in the history of the carpet sweeper business. The Baby Bissell makes a Christmas present that will please the little girls, while the large ones will please the big girls.

Recent Trade Publications.

The Kelly & McBean Co., Niagara Falls, N. Y., send us their catalogues Nos. 10 and 11. They say: "In these catalogues we have illustrated our line of flat-ware and hollow-ware, and have tried to represent all the goods so plainly that no difficulty will be experienced in finding any particular article desired, thus making it easy for you to send us an order. In our silverware and aluminum novelty department we have the largest line of souvenir spoons in the country, with a 'thousand and one' other articles of souvenir and advertising novelties in both silver-plated and aluminum." The company also manufacture a line of dog collars, harness check hooks, harness snaps, halter chains, cow ties, coil chains of every description, plumbers' chain, key chains, etc., etc.
